Now back to the question at hand, I have NEVER heard in twenty years of a company policy of witholding scanner freq. information. Frankly, I have never seen the question addressed at all above the store level of management. It may be that somewhere the DM has made this decision, but more than likely not. Therefore, the store manager is probably the source of this position. In this case, I refer you to the solutions stated above. It may be true that the store does not keep a list of "good freqs". I have worked in stores that could care less about them. They went to the trouble to look up a few in the Police Call guide and stuck them in the display models. I can also understand that they might not want customers roaming through the guide for hours looking for freqs with no intention to buy. Again, that is up to the store manager. We used to keep a couple of the previous year's copies for our customers to look at.

I agree completely with the statement that being sued for giving out the freqs is total nonsense. The book author probably got the info from the FCC. If anyone wanted to sue it would be them, and since they give it away on request,

that is not likely.

One final note: It is repeatedly stated by some on this newsgroup that Radio Shack is full of s___. If they really believe this, what is it that they have on their shopping list when they go there. :-]

JH>I don't see anything wrong with them not giving you a copy of their list whe
>they are not sure to
>get any business in return, that is a few hundred dollars of your money for
>something like a
>scanner.

It would not have bothered me if they had said "we only give our list to people who purchase scanners from us, it just our policy and an added incentive and bonus for people to purchase from us." That's fine. But don't tell me that it is a copyright problem and that they pay Police Call a dollar per scanner for the rights to do that. According to a message I was forwarded from the publisher of Police Call they do NOT pay for the rights to distribute a list to scanner purchasers; i.e., if they only give it to scanner purchasers it has nothing to do with legal restrictions. Do what they want, just don't feed me a line of BS.

PM>My friend, Gene Hughes, the publisher of Police Call, asked that I send you
>his response to your posting on rec.radio.scanner the other night.

Well, thank you! Nothing like hearing it from the horses mouth.

PM>Radio Shack HQ has told stores not to reproduce material from my books.
> They've never paid a cent over the cost of the books. Some stores have
>compiled material from other sources, which is OK with me.

So, if I purchase a copy of Police Call from them (which I did), there
should be no problem with them giving me a copy of their list, since
they stated that their list is a combination of the frequencies from
Police Call plus their own listening list.

PM> They've never paid a cent over the cost of the books. Some stores have
>compiled material from other sources, which is OK with me.

So, the line about giving out the list with the purchase of a scanner
because they pay the Police Call publisher a dollar for each scanner
they sell is B.S.? In other words, they are not paying Police Call for
the rights to give out a list when they sell a scanner?

I have no intention of ripping off Police Call, I have purchased a copy
every year for many years. I just don't like a young snot at Radio
Shack giving me a bunch of B.S. If they want to reserve their lists
for someone who purchases a scanner as a bonus, fine. Just don't lie
to me.

Also, from the comment from Gene above that they do not pay anything
above the cost of the book, the line about paying a dollar for every
scanner sold is an obvious lie. It is either legal to give their list
to anyone they wish, or to no one.

What is sad, is that most people in business have not figured out that
a smile, the truth, and a genuine desire to help is the best
business builder there is.

From: ebrady@freenet.columbus.oh.us
Message-ID: <431a0i$dk2@acme.freenet.columbus.oh.us>
Source record: 249381

I am planning to travel across country in a couple of months and was thinking about buying a mobile scanner for my car. I have read several articles about different mobile scanners that let you select a state from the keypad of the scanner and then the scanner automatically tunes to that state's mobile repeater frequencies.

Could someone please give me some information or feedback on these type of scanners and if they are legitimate in there claims? Also could anyone recommend a certain brand to me....

I am well aware that it is not legal in some states to have a mobile scanner, but in other states it is. I am looking for something other than a radar detector to increase my odds of not getting a speeding ticket :)

Thanks in advance......

I don't know about the other products, but I do have the Percon FCC Frequency CDROM. It comes with programs for Macintosh machines and both DOS and Windows programs IBM compatibles. The database is a large dBASE type file, but the DOS/Windows program and the index files that you use to access the data are Foxbase files. I can still access the data using dBASE, but I can't use the index files on the CD. The Spectrum program is not as extensive as the seach programs on Percon's more expensive frequency CDROMs, but for the price I can't complain. I am a very satisfied Percon customer.

Just bought (9-8-95) pro-2006 from radio shack! in Connecticut!!!

LAST ONE IN THE USA!!!

Went into RS and asked if they could find me a 2006...
They told me nope!... so I bought a Palmtop(Z-PDA) from him and asked him to try.. the next day he called me back and told me he found one in Ohio! I Guess someone in Ohio had it on layaway for 2 years and never picked it up! He had it delivered to Connecticut for me(next day I might ADD) I bought it for $249.99 (current USA Price for one unit).. went home opened it up IT WAS BRAND SPANKING NEW.. except the antenna was missing.. Called RS back and they said come on down and get one (for free)... They gave me the TOP OF THE LINE (29.99) magnet mount scanner antenna and a RADIO! magazine for free!
Well needless to say RS won a LIFETIME customer now!

To HELL with all the RS bashers!

Yes, it will be out in the Fall, more specifically, by the end of October.
It has been taking forever due to the fact that there is so much to update
and so much new stuff going in such as PL tones for most metro areas
and a community listing for every city/town in the US. We have been
working on it non-stop for a while now and expect it to go to press soon.

For more info, check with Scanner Master at 1-800-722-6701

Scott,

I hear it all the time and I never gave it much thought, but it's probably an ANI system. Automatic Number Identification. Sends a signal to the dispatcher when keying up so that they know the unit number. Cuts down on horseplay, or helps ID a unit in an emergency when the trooper can't talk.

The mobile repeater system used by the Iowa State Patrol is very elaborate. It includes a voting system so that when more than one troop car arrives on a scene, the mobile repeaters in the troop cars won't all repeat every HT transmission. The APCO Bulletin had a detailed article on the ISP system a few years ago.

It makes me wonder about all those people using photocopy machines
in your local library. Every time you stick a dime in it and copy
a page of a book, you've violated a copyright somewhere.
But how do you copyright a number: Like Police Call supplying you
the frequency of 452.50, which is used by the LAPD. Does Police
Call or the police department own the copyright to that number.
But I have my RS PRO-2006 programmed with several hundred frequency,
some gotten from Police Call, others from all sorts of places. If
I supply my neighbor with a copy of all those frequencies, by looking
each one up in the scanner's channel bank, have a violated a
copyright. I doubt it, and can't see how someone could sue someone
for a copyright law violation by doing that.

It is not necessarily the numbers that are copy protected, but the
format. Like how his columns are arranged, which letters represent
police, public utilities, etc... Also for detection, some bogus
info might appear so if Mr. Hughes finds someone elses freq. guide,
he can look for that bogus info. So even if you blatantly copy
the info, reorganize it and try to sell it, that could get you into
trouble.

Most Shack stores have no problem offering free freq. lists. even if
they got the info straight from Police Call they usually only give a
freq. and the name of the dept. using it but since names aren't given
in Police Call, they aren't violating the copy protection. Of course
I am also assuming the lists have no more than 50 frequencies and they
are all active.

On another note, I don't think people should get pissed if the Shack person doesn't want to give a free copy of any list they might have. Although if they start lying to me I just leave. On the other hand people keep saying you get what you pay for but that is bull. We're not going in and asking for a free scanner, just a piece of paper. The benefits from friendly service far outweigh the cost of a piece of one photocopy. I lived close to a store in Billings that charged for their list. I found another store across town that offered a free list (and a better one at that!). From that day on, I would brouse at the closer store but buy from the store across town.

One time I went to the store that charged for their freq. list looking for a mobile scanner antenna. I said I didn't want mag mount and the guy said just use a CB antenna. I said no, I don't think that would work so well (trying to be polite as I was thinking to myself, what a moron). He said sure it would. Then he proceeded to get rude and tell me that he of all people should know because he was the head of the car stereo installation dept. What an A**! Yes I know I can use a CB antenna, I tried it years later but the one I custom made for the freq. range I wanted worked a helluva lot better.

I recently flew American Airlines, on a McDonnell-Douglas DC-9 Super 80. Specifically prohibited in the AA rule book are scanners and shortwave radios. I think they put it this way: "No to any radio whatsoever." (The language may have been different, can't remember) I was upset. I had my BC200XLT in my carry-on luggage, and wanted to monitor ALL the aircraft traffic I could!

Somehow, I find it HARD to beleive that a scanner/shortwave/radio/whatever equipment with the exception of transmitters can produce enough RF noise to effect the avionics. (avionics should be totally sheilded, too, so NOTHING should interfere with them) I can see them taking a precaution during take-offs and landings, but the whole flight? Seems like overkill to me! But then at 30 thousand feet, better safe than sorry.

This should settle the matter. Sure, FCC records are public - but Mr. Hughes
has collated them and provided them in a unique and useful format. Legally
and morally, this justifies his copyrighting the material, and RS is right in
refusing to give out his intellectual property for free.

Of course, some people out there don't think twice about about copying, using,
and even profiting from others' copyrighted material. I guess you could call
such people common thieves.

Happy scanning,
Ken

I'll listen to whomever I want to...

From a candid conversation today with a Shack Manager all the new RS
scanners are a " single chip design so people won't muck about inside
them" his quote. I suggested that it is kind of a harsh action to take
just to comply with the US ECPA, and he says well Canada will have the
same law within a year or so. I don't buy that arguement as the Canadian
Government has looked at it a few times and all times decided that it
is not a big enough problem. But I would assume the entire Canadian sales
of scanners is lower than total sales in a large USA city like NYC. My
guess is they just want one standard unit rather than having to contend
with a USA model, a Canadian model etc...

My problem with Radio Shack is that they have salespeople who wll jump on you the instant that you walk in the store but then are unable to answer even the most basic question about the very products they sale. Geez, I asked a sales guy where I could find a gender changer a couple of days ago and he looked like I just asked him to undergo a sex change operation!

I could recite chapter and verse about how many times this sort of thing has happen, but I think that it would be like preaching to choir. Everyone has had negative experiences with Rat Shack and its dubious policies--we go there because it's the only game in town, most of the time. Frankly, I'm not interested in hearing from RS apologists who are ready to mouth the canned responses, such as "it's a policy..." and "that's the way it goes" and "you don't appreciate those misunderstood salespeople..."

I want to hear from someone at RS who will stand up and say, "Mr. or Ms. Customer, we need to work harder for your business and we're going to do that. Further we appreciate all of the money that you and other hobbyists spend here and because we recognize that it helps pay our salaries!" You want to give RS excuses for providing less than sterling service, I'm not interested.

A bit of hyperbole, there. I can run my scanner in a DOS
box under Windows 3.11 (and OS/2 Warp) while doing other
things - and I'm not using Scan*Star.

>copyright. I doubt it, and can't see how someone could sue someone
>for a copyright law violation by doing that.
>

What you folks are overlooking is that the COMPILATION of the frequencies
are copyrighted, not the frequencies themselves. Your local phone book
has a copyright on it too -- that's to prevent people from copying the
entire compilation of phone numbers (the phone book) and supplying it as
their own.

The definition of "fair use" seems to vary, but copying a single bit of
information from the book (half a page?) may fall under the guise of fair
use and is not necessarily a violation. If you, however, copy multiple
pages from the book and give that away (or sell it), you're in violation
of the book (or compilation) copyright.

So, to answer your question, you have violated no copyrights by providing
your neighbor with frequencies from your scanner. If you give your
neighbor a photocopy of the poages from Police Call of your city, then
you probably are in violation.

Remember, the licensee and frequency info is public record -- but any
effort and research into the public records to create a publication ought
to be protected, right? That's what copyrights are for.

: I recently flew American Airlines, on a McDonnell-Douglas DC-9 Super 80.
: Specifically prohibited in the AA rule book are scanners and shortwave
: radios. I think they put it this way: "No to any radio whatsoever."
: (The language may have been different, can't remember) I was upset. I
: had my BC200XLT in my carry-on luggage, and wanted to monitor ALL the
: aircraft traffic I could!

: Somehow, I find it HARD to beleive that a scanner/shortwave/radio/whatever
: equipment with the exception of transmitters can produce enough RF noise
: to effect the avionics. (avionics should be totally sheilded, too, so
: NOTHING should interfere with them) I can see them taking a precaution
: during take-offs and landings, but the whole flight? Seems like overkill
: to me! But then at 30 thousand feet, better safe than sorry.

: Ben
Not withstanding all that's been said, one must ask if the airlines don't
want scanners in use because the passengers might hear a few things the
airlines don't want them to hear eg aircraft conditions, ACTUAL reason/s
for delay, etc.

Can your scanning program do this:

Drive an OS535/PRO2035 at 60 channels per second,
Drive an OS456/PRO2006 at 50 channels per second,
Drive another OS456/PRO2006 at 50 channels per second,
Do a spectrum analysis on an R7100,
Play wave files,
Edit text in microsoft word,
Print from Corel Draw

ALL AT THE SAME TIME? Or does scanning suffer a bit when you start up Word?

The above configuration is our standard test bed.

For more info, see http://www.scanstar.com/

Text can be copyrighted, but information cannot. Again, you cannot
copyright information, such as radio frequencies. If you photocopy or
scan in the original Police Call text, so that the text of the information
is exactly the same, down to the format and typos, this would violate
copyright (assuming not for Fair Use, etc.). However, the actual
information regarding what the frequencies are cannot be copyrighted.

Example 1: telephone directories are copyrighted. However, it is perfectly
okay to find a phone number via the directory and sell it for however
much anyone is willing to pay for it. Example 2: if you read a copyrighted
news article in the paper, you could rephrase the story and use it
in your own newspaper or tell it to your friends. Information cannot be
copyrighted.

>Of course, some people out there don't think twice about about copying, using,
>and even profiting from others' copyrighted material. I guess you could call
>such people common thieves.

This, however, is a different issue. Perhaps there is an ethical
wrongdoing by leeching off of others' work. When you do take ideas or
information from others, you are supposed to give them due credit, but
again this is a different issue.

I suspect that Radio Shack probably just doesn't want to hinder their
sales of Police Call, for monetary as well as (not wanting to antagonize
the author's) reasons.

Well, I'll do it, but not on your terms. I get paid win or lose, on a performance basis. The usual fee for these services is $25,000, 50% on start, the rest on delivery of the report, regardless of what that report says.
Take it or leave it. I'm one of the very few who can handle this kind of case.

You're so full of crap I smell it from here. You're obviously just
above the govt's illiteracy scale to be able to post here. You totally
lost the point of the original post.

RS is beginning to treat all their customers, new and old, with indifference.
No one is looking for freebies, what's so unusual about helping a newcomer
to an area with frequencies (and of course, a potential customer).

You obviously have no idea of how to win customers or do business in a
productive manner. You sound like the type that if asked to help someone
in dire need of assistance your response would be, 'what's in it for me?'

Go back to doing what you're good at, nothing.

Jeff,

Thank you for confirming the point of this thread. My friend and I had
a similar experience at a local RS, wouldn't let his toddler son use
the rest facilities while he was writing up a sale ticket for shortwave
receiver. He told the guy where to get off and we walked out the store.

On this note, anyone know RS's email address? I'd love to forward this
thread to their marketing department. Seems like their strategy is not
working well.

I too refuse to deal with RS and I cut up my RS charge card and sent
it back to RS a few months ago with a letter why.

'You got questions? Come on in, sucka ;-)

I though it was Fred Lloyd, AA7BQ, who promised that for his QRZ CDROM.

(BTW I like Pete's compilation very much, although I find that RT Systems' SAM to be a far better callsign program, if that's all one needs. The browse modes for name and callsign searching in SAM are very good.)

^^^^^^^^^ ^^^^^^

Most use spread-spectrum, simplex only and are not repeatered. At any
rate, when you transmit, FCC regulations require that you *know* your
frequency and mode of transmission. So what's the problem?

I think your thoughts in <1995Sep10.205327@clstac> have been repeated here,
so the frequency is clearly far too high. Surely your personal physician
is the best person to testify to this in court.

No need for an expert witness. Wrap yourself in aluminum foil before going
to court. The Faraday cage will will contain your aura, thus allowing the
judge to identify the thought frequency/bandwidth and evaluate the case.
Bring an Optoelectronics Scout along and insert into any convenient orifice.

If you look in the 1996 catalog the new 2042 is in there. It is essentially the same as the 2035 with the addition of intellegent search and store and velocity tuning. RS also added $50 to the price tag. Actually it would be a fairly good deal to buy the discounted 2035 and get the Opto board for it, with a version of Probe on the way you will be able to scan at around 100 fps, about double what Probe will do with the 2006 and the Opto 456.

3884. Iowa State Patrol "Identifiers"?

Newsgroup: rec.radio.scanner
Date: 1995-09-11 00:00:00 UTC
From: Scott Van Aartsen <svanaart@nwciowa.edu>
Message-ID: <43036m$g26@news.iastate.edu>
Source record: 249475

Here in Iowa, the state patrol uses quite an elaborate VHF repeater system. The freqs aren't elaborate -- only two per area, but I have an idea that the system they are using is.

Here's what I mean. When an officer is done speaking, and lets go of his mike button, a distinct "beatle-beat" type tone is heard. (That's just what it sounds like -- not some obscure reference! :)) I've often wondered what that tone was for, and why. I have heard dispatchers call it an "identifier", in this sort of manner: "Please 10-9. I didn't catch what you said, all I got was the 'identifier'." This tone is not heard when troopers are using car-to-car freqs, the mutual aid freq, or any other freq except the State Patrol "DPS" and "LEA" frequencies. WITH ONE EXCEPTION: When the officer is using a hand held...the tone comes on after EVERY transmission -- whether on one of the patrol freqs or not.

Some have said this is an officer saftey system. If the officer's HT doesn't move in a set amount of time, I am told the "identifier" will keep sounding so other officers can hone in on the "downed" officer's radio signal. No one has been able to confirm this...I was just wondering if anybody knew for sure what this is...

Thanks!

73 de Scott

>got from RS
>people.

No, I'm afraid you are missing the point. First of all, the person you are responding to is not the person who experienced the issue under discussion, I am. Secondly, as I stated, I have purchased quite a few things from this store in the three weeks I have been in this area (cable, antenna, antenna mounts, batteries, misc. hardware, etc.) The "attitude" you are referring to was basically asking if they had a frequency list that they gave to customers, as this was a regular practice in the RS stores I have frequented across the country. I was then talked down to, in a very demeaning manner, and, if the publisher of Police Call is to be believed, lied to re: them paying Police Call a dollar for every scanner they sell in order to have the rights to give out their list to scanner purchasers.

JH>If you don't like RS, why do you trade there or talk about them if you don't
>trade there. Because if you
>don't trade there then you really don't know how the treat other people. Ju
>maybe you are the
>problem and not the RS people. Could be that they are just smarter than you
>Think about it.

I have thought about it. That statement made no sense. I usually purchase things at a local RS because the RS stores in my home towns have usually had decent folks who I have made friends with and have dealt decently with me (e.g., exchange items that don't work, etc.) In return I sometimes was willing to pay a bit more than mail order.

JH>There again, why do you shop there. Most people must not feel as you do,
>because this newsgroup
>is mostly about RS scanners. RS is by know means the largest seller or make
>of scanners. But their
>scanners seem to end up being the most popular.

First, the post is about one particular store. RS stores I have dealt with in the past have been quite reasonable: let's face it, a store is really the folks who work there. Most people I know do not like being lied to. The fact that Radio Shack sells my favorite scanners (I have a 2006) does not excuse a jerk of a clerk from lying and treating someone in a demeaning manner. I certainly will not shop at this particular store any more, and I have already written a note ot the manager and DM letting them know why. I am not narrow minded enough to generalize this jerk's attitude to represent all of RS.

Toyo Chen said;

TC>After listening to those public service radio (specially PD and FD),
TC>there are a lot of codes, such as ten-code and CODE-<number>, on the air
TC>which I don't know what exactly means. Could anyone point me or tell me
TC>the meaning of those code for Boston PD and FD?

I have them, but being basically lazy, and having them in a text file, I
will ask you to post and address so that I can mail the info to you.

TC>Also, are there any active frequencies used by MA state police? I received
TC>few of them, but they are in low VHF... However, my radio is only capable
TC>of receiving VHF-high and UHF.

Lots of active MSP frequencies. Unfortunately for you, most of them in
the Boston area are on 800 Mhz. The only really active high band
frequency is 159.030 which is the Turnpike repeater.

>Can you give info for Roger Cravens bbs?

Michael:

Roger is a friend of mine. The Scan Atlanta BBS died a couple of
months ago. Bill Scruggs had a major computer crash and could
not bring it back up. Roger picked up his telephone number and
tried to get it running, but with his networks, his phone bills were
costing him a arm and a leg so he closed his board as well.
Right now, there is no "scanner based" BBS in Atlanta that I am
aware of. It's a shame, Scan Atlanta was a jam up board.

I popped for a similar Grove offering and found that the low-band performance is awful to non-existant. Here in New England, where each small town has it's own small-time dispatch running maybe 60 watts, travel out of town means loss of reception with that antenna.

High-band was a little better, UHF was almost solid, and 800+mhz was clear.

On checking the documentation that came with the antenna, I found it was rated for 118mhz and higher, and not the 30-1300mhz advertised. Grove explained that they'd field tested it and it worked well at 30+mhz. Don't those North Carolina counties blast about 330 watts off a mountaintop?

I switched to an 83" piece of speaker wire with better results, but finally broke down and put in a center-loaded Channel Master and drilled a hole for the coax. Works well.

Unfortunetly, many people (including myself) have gotten these
things. Aside from knowing antenna theory ahead of time, one might also
note that in fine print on the back of the package it mentions something
regarding its "peak" reception being in the range of like 130-150Mhz or
something. Like others before me have attested to, its performance plain
stinks at VHF low freq's, and *I* think the only reason rat shack says it
picks up 25-1300Mhz is so ppl who have a faint idea of scanner freq
ranges will buy it. The antenna itself has no mutliband or wideband
attributes at all, and it wasnt a big surprise to me that it does not
perform well at low freq's. It was also partial understanding of mine
that the capacitive matching system it uses doesn't even work well at low
freq's, but I honestly dont know alot about that end of it. It's nice
for vhf-high police/pub service stuff, but outside of it, its performance
really suffers. Just my two cents
jeff kb2vrk

3903. Radio Shack on-glass mobile scanner antenna?

Newsgroup: rec.radio.scanner
Date: 1995-09-12 00:00:00 UTC
From: Christopher Carde <ccarde@student.umass.edu>
Message-ID: <432vsi$1s4@nic.umass.edu>
Source record: 249334
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

For almost a year now, I've been doing my mobile scanning with a trusty Radio Shack Pro-2022 and a beat up 1/4 wave 2 meter mag mount antenna. I really mean *beat up* here -- the shield of the coax had been shredded and taped together as best as I could manage several times, and the whole thing had been crushed in my driver's side door every time I got in or out of the car.

I finally got fed up with the antenna when I began having trouble receiving our local police in various sections of town. Opening up the door to temporarily un-crush the coax helped somewhat, but it wasn't the ultimate in mobile scanning convenience. :) Radio Shack's mobile on-glass scanner antenna looked like the ultimate in price and convenience. Not only would it solve my problems with crushed and shredded coax, but it would also be designed as a widebanded antenna (it's advertised for something like 25-1300 MHz), as opposed to my 1/4 wave 2 meter, which I believed was somewhat narrowbanded.

Well, I followed the installation instructions to the letter, and everything seemingly went smoothly. Unfortunately, on-the-road performance seems to be actually *inferior* to my old beat-up *2 meter* antenna across the spectrum. My listening is primarily in the UHF (460-465) MHz and VHF-lo bands, and the antenna is definitely not performing anywhere nearly as well as my old one.

Can anybody offer an suggestions as to why this may be? I did notice before I installed it that the adhesive foam on both the coupler box and the antenna foot had abnormal indentations (they weren't perfectly flat). But, recalling how these antennas work on a capacitive principle, I figured that that small irregularities in the adhesive foam wouldn't have a great effect.

I'm worried that Radio Shack either sold me a defective unit, or that the whole design stinks. Of course, there's always the possibility that I was spoiled by a very good antenna, and that I expect too much from the new one..

I'd appreciate *any* ideas! (I *miss* the local police! :))

Thanks,
Chris, N1KEX

Robert - A Spectrum Analyzer is an excellent method to locate intermittent transmitters. The main problem is the high cost of a good analyzer that has enough sensitivity to "hear" the desired signals.

I have used several different Spectrum Analyzers to track down sources of intermodulation at some of our transmitter sites.

If you have access to a spectrum analyzer, use it !!!

Hope that I have given you some help

Message-ID: <433au5$5oj@osh2.datasync.com>
Source record: 249337

Dude, you're apparently upset at either the fact that GE is using the solid tone on its frequencies at various times, or that there is a constant carrier on a single channel all of the time now allowing you to monitor the rest of the channels... The S.O. in the next county is using this GE trunked system the one with 5 channels, and the dispatch is on the carrier only channel. My county S.O. is on a motorola type-II trunk using 5 channels, and no one else is on it but them, so I can hear all conversations perfectly. However thay are getting the funds to move to the new Motorola Type-III digital trunk. Which all signals will go out as a digiatal signal, THIS WILL ALSO SUCK!!!! I feel for you man.

3907. Re: Can I listen 159.825 Mhz

Newsgroup: rec.radio.scanner
Date: 1995-09-12 00:00:00 UTC
From: "Jimmy W. Simmons" <nexus@datasync.com>
Message-ID: <433ba5$5oj@osh2.datasync.com>
Source record: 249338

Yes, the freq. 159.825 is in the middle of the VHF-hi band and all Scanners made after 1970 will cover this frequency range, most scanners that are programable cover these ranges 29~50mHz 136~174mHz (159mhz is inbetween there) 406~512mHz.. And the newer ones also will do 118~136mHz (AM air) and 806~956mHz (800 band) But any scanner made today will cover that freq. and its also only a 5khz freq you listed. not a 12.5 or 25khz as you mentioned. 12.5 would be 159.8125 and 25khz would be 159.820 or 840... Anyhow good luck with it...

Also -

the DPS units run off the county dispatch for the county they work in, so
check them as well. For example, in Williamson Cty (best one in Texas)
you might here "6233 to 6238" on the 154.86 sheriff's freq.
They then might go over to car-to-car 154.95 or 154.65.

So, check you county sherrif for them as well.
Be seeing you,
Number 6

The reality is that you will lucky to hear anything, even of your airline does allow scanners. I fly Delta at least 5 trips per month and they do allow scanners. They SPECIFICALLY state this in their magazine. There are no exceptions for the type of aircraft (so there goes the B-737 argument). Perhaps, these other airlines do not understand the difference. BTW, the few times I have taken a scanner on board and used it after 10,000 feet, even the flight attendent said that I could not use it. I had to refer her to the page in the SKY magazine about.

SO, the bottom line -- Delta allows scanners above 10,000 (or as soon as the seat belt sign comes on during approach). However, because of the orientation of the antenna away from the aluminum tube, it is very difficult to pick up much. You will hear the plane's communications, but it will be harder to hear the controllers particularly distant centers (ARTCC).

3918. Crackling volume control

Newsgroup: rec.radio.scanner
Date: 1995-09-12 00:00:00 UTC
From: bishwa@UWYO.EDU
Message-ID: <1995Sep12.125855.14862@roper.uwyo.edu>
Source record: 249349

Hi Everyone,
Not specifically the scanner question but could you please tell me how
to get rid of the annoying crackling noise on the volume control on my walkman.
I know it is possible to put some kind of liquid on the potentiometer to get
rid of the noise but can't exactly remember the name.
Any response would be greatly appreciated. Thanks in advance.

RARJ> I purchased a Mak .380 in July. So far I've shot 150 rnds of
RARJ> FMJ's with no problems. Bought a box of 90 gr. Federal
RARJ> Hydra-shoks to try out. After the 2nd shot, the Hydra-shoks
RARJ> would not feed into the barrel, jammed about half way in. This
RARJ> happened 4 or 5 times in a row. Changed clips and had the same
RARJ> problem. Anybody else have this problem or is it the Mak. Any
RARJ> suggestions on other defensive rnds. to try ?

I occasionally have this problem with Fed H-S in .45ACP. This happens even though I've had a "throat-feed ramp" job done on my 1911. If you are going to keep the Mak, I'd consider starting with a ramp job, if that is even possible on that weapon. It's generally not that expensive, and since your "buy in" on the Mak was not that much, spending a little on gunsmithing after the fact to make it a good shooter is a good idea. I know quite a few guys who are just not satisfied until their weapons will feed everything.

Question, I've looked at adding the .380 Makorov to my personal armory, but the two or three I've held have absolutely *terrible* triggers. How is your trigger action?

Also, for anyone out there who may know, how is the trigger on the 9mm Mak?

> The Pro 2035 is $389.95

A combination of a two reaons I beleive.

Mainly it didn't quite get the following or favourable reviews its predesesor (sp?) the '2006 had and the Bearcat 9000XLT is generally favoured as a "better" unit. One of the main "bugs" with the '2035 was its "auto store" feature.

Here in Europe the PRO-235 also failed to pass the new EC certifiacton that is required after 1 Jan 96 (rather like FCC Certification). This meant that without some changes Radio Shack could not market the radio within the EC. Combine this with the US "problems" and I guess RS took one step back and suggested they re-do the whole thing - hence the upcoming PRO-2042.

Wrong.

The FleetSatCom downlinks are in the 240 - 270 MHz range.
You are confusing INMARSAT commercial satcom with USN satcom.

If I have to take a wild guess, all units must have CI-V interface. I know for a fact, OS456 board has that. You can even use single PC to control multiple 2006 with OS456 using CI-V port in series.

Just heard that the FBI sniper that killed Vicki Weaver invoked his 5th amendment rights today when questioned by Senate investigators in a closed door hearing. He was also offered limited immunity in return for his testimony about the events surrounding the shooting, but his attorney declined to take the deal. I predict that he *will* eventually take some kind of deal. The investigators are trying to use his testimony to fry bigger fish, and they will probably threaten him with prosecution based on evidence they already have in order to gain his cooperation.

WRL> I am considering purchasing a .357 6" barrel revolver primarily for
WRL> punching holes in paper out at the range and maybe for a deer hunt. I
WRL> am also thinking of putting a scope on it. I have been looking at the
WRL> S&W model 686, Taurus 689, and Ruger GP100. I like the feel of all
WRL> three but have never shot any of the three. My question: Is there any
WRL> difference in accuracy of the three brands just buying them off the
WRL> shelf? Would one brand hold a tighter group than the other?

I own a S&W Model 19 .357, and I love it. I recently had the pleasure to fire a T689 with red dot scope. It was really a nice shooter, a good trigger, nice grips. I believe the owner told me it came from the factory with hogue style rubber grips. I don't remember exactly what the size of the groups were, but I *do* remember thinking to myself that there was no discernable difference in my persoanl accuracy vs range. This means, with a gun that I had never even picked up before, I shot just as well as I do with my 19. Take away the red dot sights, and that puts them about even. I would not hesitate to buy a Taurus if I were in the market. It's the least expensive of the three, isn't it?

I would not recommend P.C. '96 edition. If you are a heavy scanner listener, I would recommend a book called SCANNER MASTER. This company persents the information must easier and more explicit. they give you the input/output frequencies, and if applicable the CTCSS tones. In addtion, it lists who the frequency is registered too. If you want more, email me back and I'll give you the phone number to receive a free brochure!

3936. Re: Using existing car antenna as scanner antenna?

Newsgroup: rec.radio.scanner
Date: 1995-09-12 00:00:00 UTC
From: ec222@aol.com
Message-ID: <4350lt$qoj@newsbf02.news.aol.com>
Source record: 249367

: Has anyone tried using your existing car radio antenna as a scanner
: antenna?

: By using a "Y" adapter, both the car-radio and scanner could use the
: same antenna. Some mobile scanners have the same antenna jack as
: car-radio antennas so the connection would be easy.

If you can replace the coax with some real coax, and not that real thin wire stuff that they use in car radios, the reception with improve dramitically. I couldn't on my antenna as the coax is hard wired right into the base of the antenna, making replacement of the coax impossible. I bought for $30 a Radio Shack CB/AM/FM antenna with a swivel head base. You might have to move the location of your antenna to use this one. Then I threw away the coax and spilter that came with the antenna and used some RG-8 mini with a common TV spliter. Reception on FM is fantastic! AM is okay except for more interference from the wipers, engine, etc, due to the increased sensitivity I imagine. Scanner wise it works great too! Add a Grove PRE-5 booster and you'd really be not wanting for anything better. You do get feed back pulse from the scanner when scanning on the AM band though.

3937. Re: AOR Scanners

Newsgroup: rec.radio.scanner
Date: 1995-09-12 00:00:00 UTC
From: ec222@aol.com
Message-ID: <4350qi$qq6@newsbf02.news.aol.com>
Source record: 249368

: I had an AOR 8000 and traded it back for my BC200XLT.There were 3 or
: four freq's it got the WORST interfeence on (all being local FD's. It
: was as if someone were just keying the freq, but it wasn't. Also, I
: put it next to a two way radio for the FD, had them both on the freq
: (153.770), and the two way went off, the AOR didn't break squelch. So,
: I tuned the squelch ALL the way, and held MONITOR. NO NOISE, NOTHING.
: The two way was still recieving a call. I held monitor for more than a
: minute before it finally recieved sometihng. I wondered how many calls
: I missed because of this?? I now have my BC 200, and it has ONE
: problem. -100KHz birdie with a two way. i.e. if my two way is on
: 482.8125 (RECIEVE, NOT EVEN XMITTING!!) the BC will lock carrier on
: 482.7125 (i.e. if I scan 482.7125, you will hear wha sounds like a
: dead carrier.) I'd take the BC200 over the AOR ANY DAY!! Oh, battery
: life was the WORST. The scan rate was slow. Even though I sold my
: BC200 for $180 to get the AOR, I was happy to give the AOR to the
: person I sold the BC to to get back the BC200. I learned my lesson..

I understand your problem, however having the done exactly the same thing
you did in moving from a BC200XLT to a AR8000 I must say that receptions
wise for me the AR is about even on VHF-lo, better on VHF-hi, much better
on UHF and superior on 800MHz. I do notice that the Bearcat performs
better on VHF-lo than the AR when use with very high gain antennas. I
think due to the fact that it's a more sensitive receiver. The AR also
has a much less of a problem with intermod than the Bearcat ever did. I
think the AR is the best scanner I've ever used! The Bearcat has a better
battery setup and a more robust build quality. The scan rate for the AR
can be played with and it's twice as fast as the (16 ch/sec vs. 30 ch/sec)
the Bearcat.

I dislike my Pro-46. I would trade that in for almost anything. The batteries wear down too fast and the thing makes too much damn noise when pressing buttons or doing what not.

It ain't worth keeping. I would go for a Uniden/Bearcat scanner....anything besides RS.

)asked a sales guy where I could find a gender changer a couple of days ago
)and he looked like I just asked him to undergo a sex change operation!

[rest cut]

I used to go to Radio Shack back a long long time ago. Like in 1965.
Back then, it =was= a Radio Shack (Ham slang for the place where one had
his gear set up). It was run *by* Hams and *for* Hams. The owner/manager
was usually a Ham himself. He was very curteous, and very knowledgeable.
He was also, slowly, going broke.

Then Tandy bought Radio Shack. They started tracking sales, so they
could figure out which items made money, and which did not. They quit
carrying those items which did not make money. They introduced new
"consumer" equipment (stereos etc. and other "plug'n'go" no fiddlin'
equipment). They got rid of the "junk table" (snif).

They lost the interest of the "technical" Ham type customer, and gained
the interest of the technically uninterested type customer.

They also, not so incidentally, began making money.

You wanna complain? So start your own store, cater to technical
customers the way they like, and try to make money yourself. AS for ME,
-I- think they are great, given what they are. They are not what I
would LIKE, but they are BETTER THAN BEING OUT OF BUSINESS, BROKE, AND
NOT THERE FOR ME AT ALL.

Just my $0.02 put in the ring.

Mike

Thanks to those two individuals who posted the frequencies
for the Chicago Museum of Science and Industry.

I found the following to be in use:

464.475 - 464.455 - 464.725

All three are repeater outputs. The first seemed to
be used by security, the second for internal guides, etc
and the third by housekeeping. If you go to Chicago,
tune them in.

(POST SNIPOLA)...

Very uncool my friend.
They are not "the only game in town."

If they are your primary source for parts, than you are not an experimenter
nor a hobbiest.

A good hobbiest has more than 1 source. If you are held captive by the local
Rad Shack, I feel sorry for you.

The moment electronic experimenters realize there is life after the shack,
they begin to mature at an amazing pace.

I got a Sony Pyxis from Damark for about $299 a while back. It is pretty good. It will run on four AA batteries, but not for long - a few hours if you are lucky. Apparently, it uses a good bit of power and is best suited for applications with a vehicle where you can plug it in a cigarette lighter or use the vehicle battery.
I installed mine in a dune buggy which I use for off-road riding and exploring. You can store locations, find the distance and heading to a location, get your current speed and heading (plus or minus).
I recently took my dune buggy to Michigan and found that I was 600 miles from home.
It has a mode where it will map your course. The maps are somewhat coarse and of limited value for me but are still interesting to see how I traveled. It is probably of higher value to a boater who travels larger distances than I do during my trail riding.

Yes, I use a spectrum analyzer as a panadaptor, connected to the IF
of my Icom R7100 receiver. In that mode, I set the span to only a few
MHz instead of the hundreds of MHz a spec. an. can display.

It's a good way to watch the wandering spurs from paging transmitters.
I've also watched wideband digital signals which would not normally
open the squelch on my receiver, e.g. TDMA cellular phone signals.

Hi!

Thanks for all of you send me lists of frequencies for Boston!

After listening to those public service radio (specially PD and FD),
there are a lot of codes, such as ten-code and CODE-<number>, on the air
which I don't know what exactly means. Could anyone point me or tell me
the meaning of those code for Boston PD and FD?

Also, are there any active frequencies used by MA state police? I received
few of them, but they are in low VHF... However, my radio is only capable
of receiving VHF-high and UHF.

Thanks in advance!!

Toyo
toyo@acs.bu.edu

P.S. Anyone knows RX coverage of new Standard C508A? I have C501 and
am wondering the difference between them... It is very good for
scanner about 180 grams (including batteries.) and has long battery
life. (40-45hrs with 2 alkarine batteries.)

Most AR-8000 reviews recite as fact the 30 ch/sec scan rate from the
AOR ads and manual, but I think the actual scan rate is *much* slower.

Did you actually measure a 30 ch/sec scan rate for the AR-8000?
I tested a AR-8000 recently and it scanned about 16 ch/sec
with a reasonable mix of unsorted frequencies in two linked banks.

The highest rate I measured was about 25 ch/sec when I programmed
all the channels in a bank to the *same* frequency and mode -- an
unrealistic configuration. (note: I didn't tweak the PLL lockup speed.)

The AR-8000 I tested is the slowest scanner when tested against
other current portables (BC3000XLT, PRO-26, PRO-60, PRO-62, AR2700).

AR-8000 test results will appear in a future issue of Monitoring Times.

: scott...i have the bloomington-based 'mall of america' frequencies listed
: as:
: 858.6125
: 859.6125
: 860.6125

You are missing 2 very important freqs:
861.4625
865.4625

The trunked system they use seems to go in order of higher freqs on
down. Therefore if no one is using the net and someone keys their mic it
will be on 865, someone else goes at the same time they will be on on
861, and on down. I remember reading about this brand of radio and that
that was a "hint" in monitoring, to program the freqs in your radio in
reversed order.

BTW, the freqs are not listed as "Mall of America" or even "Simon
Associates" they are listed as "Motorola" as the licensee. It took me
quite a long time to finally track them down. Alot of time in search mode.
Also, the callsigns are: 100's security, 200's housekeeping, 300's
maintance, 400's management (??) and 1300's as parking lot people.
Also sometimes they will simulacast certain talk-groups in the VHF
business "dot" freqs.

: Any response would be greatly appreciated. Thanks in advance.

Hi Bishwa,

Sounds like you've got a handle of the problem. I would recommend
products like Blue Shower, Tech Spray, Tektrol and even that Wisssh
stuff if you can find it. Radio Shack used to sell a color TV tuner
cleaner and if they still do sell it in your area it's fine too. Failing
that, you'll have to go to an Electronics supply house and look for one
of the above.

Also, I wouldn't recommend using WD40 for this application as it will
incur other problems that will make it much worse.

Cheers!

Andy

3964. Radio Shack on-glass mobile scanner antenna?

Newsgroup: rec.radio.scanner
Date: 1995-09-13 00:00:00 UTC
From: vector@inferno.com
Message-ID: <798123195201@inferno.com>
Source record: 249189

the radio shack glass mount antenna is a piece of crap. with just about any frequency range below 800MHz, think about what the signal has to do to get to your scanner. first, the signals that the antenna rod catches must be strong enough to radiate THROUGH GLASS. now, last time i checked, glass is an INSULATOR, not a conductor of electricity. i can guarantee you that if you just left the coupler box on the inside of the car attached and removed the antenna element on the outside of the car, that your reception you have now wouldn't change all that much. the words 'glass mount' and 'all band'
shouldn't be used in the same sentence. glass mount antennas for any wavelength below the 800MHz band are more often than not a waste of time and money. they will not perform half as well as a magnetic or permanently mounted antenna ever will.

if you're worried about drilling holes in your car and aren't willing to replace your magnet mount antenna every few months when the cable is shot to shit from the door opening and closing, you really have only one more option. actually, it's not a bad one. try getting one of the car radio antenna Y splitters that radio shack sells. use the splitter and an adapter or two with some extra cable and you can plug the car's radio antenna into the scanner. performance won't be stellar, but it beats the hell out of the crappy glassmount antenna.

a word to the wise, anyone out there even flirting with the thought of getting the radio shack glassmount scanner antenna, DON'T DO IT!!! you're wasting your money (they don't take it back when you find out it don't work the way you wanted it to), you're wasting your time, and if you end up using the thing, you're missing a lot of activity in the spectrum that you just won't hear with it.

3968. DTMF decoder review

Newsgroup: rec.radio.scanner
Date: 1995-09-13 00:00:00 UTC
From: 6481@tccn.com
Message-ID: <4359s0$56l@jeeves.tccn.com>
Source record: 249193

Company: Metro Tel Corporation
Product: Digit Grabber, Model TPM-32
Price: around $250

For those who are serious about decoding DTMF tones, this puppy really works. Designed as a telco test instrument, the TPM-32 accepts audio input in the range of -26 to +3 dBm via an RJ-11 jack on its front panel. I connect mine to the 'tape out' jack of my Radio Shack Pro-2006 and it works swell. A bit pricey, but it grabs digits out the worst of interference, and has a display capable of storing 32 digits, pulse or tone. A switchable toggle also allows monitoring of timing (on/off) activity, displayed in milliseconds (16 digit maximum when monitoring timing). Comes with a connecting cable that has RJ-11 male plug on one end and two alligator clips on the other. Can be connected across your scanner speaker leads, headphone jack, etc. Uses one 9 volt battery, which is included with the unit. For those who have the money to spend, this is a product worth checking out. Metro Tel number is: 408-946-4600.

The views stated above are strictly my own, based on my experience with the product. Actual performance may vary, which I cannot be held accountable for.

3969. Scanner recommendations 800 and 900 bands

Newsgroup: rec.radio.scanner
Date: 1995-09-13 00:00:00 UTC
From: insanmil@nbnet.nb.ca
Message-ID: <insanmil.51.0016F090@nbnet.nb.ca>
Source record: 249194

Our emergency frequencies have gone to an 18 channel set of frequencies. The click of the transmit button causes the system to choose a channel. The reply will come back the same way but not on the same channel. If the sender pauses to gather thoughts then whe the transmission is restarted most likely a new channel will be chosen.

To monitor or make sense odf a call it seems that two scanners will be needed.

I have a scanner that covers these two bands. Ib fat all 18 channels are in the 800 band.

We only really have Radio Shack in this city but I will be in Montreal - a much larger market and selection - this weekend.

Anyone have a recommendation for a good model with;

fast scanning,

mutiple banks for storage.

Make and model appreciated and a street price if you have one .

Maybe Radio Shack is the best ?

Post (I check twice daily) or E mail is fine and thank you.

John

Most flight schools (which are located at most airports and which you can find listed in the Yellow Pages) carry them. If you ask for an Airport/Facility Directory (A/FD) for the area you'd probably find that the most helpful. A sectional chart for the area is also helpful.

i live in the dallas/fort worth texas area, and i seem to be able
to download from local bbs's all the freq's used in this area. so i
never needed to go to radio shack looking for a book of them.
as for the people working at radio shack, you will run into some
that know there stuff every now and then but not verry often.
if you wonder why most of them dont know much just ask one of them
what radio shack is paying them!

3975. Re: It's NOT illegal to listen.....

Newsgroup: rec.radio.scanner
Date: 1995-09-13 00:00:00 UTC
From: fnord@clark.net
Message-ID: <435bbo$3fs@clarknet.clark.net>
Source record: 249296

I agree that it's kind of laughable, but this is what I know as far as the way the legal system likes to look at this form of eavesdropping.

Cell phones are protected under federal wiretap laws... probably the ones that were just recently posted, but I'm not sure. But for some reason, cordless phone users are NOT protected.

Cordless phone users are considered to have "No reasonable right to privacy guarenteed" since they 'know' they are transmitting signals into the air... anything intercepted is fair game.

But companies are required to make their scanners skip over the primary Cell Phone channels because they expect a certain level of privacy since it's a phone SERVICE and not just a device they buy. Bell Atlantic, Cell One and all those guys wouldn't sell any phones or service contracts if they couldn't say that they're customers would be guarenteed privacy. Hence the laws.

So listen to cordless phones all you like.... hang out outside an apartment building or something.... always a fun time... but don't listen to those cell phones.... that'd be illegal. *grin*

From: jsisul@cstp.umkc.edu
Message-ID: <1995Sep13.223250.1@cstp.umkc.edu>
Source record: 249301
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

Does anybody know of a good NiCad charger that discharges the batteries before recharging them? Radio Shack sells two, but one only takes AAs; the other charges all sizes, but only four at a time. I want one that will charge a pile of AA, C, D, or 9-volts at a time, and fully discharge them first.

Grove, Tucker, and ACE don't have any such beastie, nor is anything advertised in any of the scanner magazines this month. Any suggestions?

Thanks,

--Jim

Earlier this year Cordless phones were added to the list. It's now
illegal to listen to either.

You're looking for "contact cleaner", also called "tuner spray". Radio Shack
has several versions, in spray or pencil form.

SV>73 de Scott

you're probably hearing a variation of motorola's MDC1200, MDC2400, or
another manufacturer'
s data signal burst. yes, it's used in most cases as a unit ID. since
it's not all that common for each officer to always have the same
vehicle and the same handheld radio assgined to them at the beginning of
each shift, the officers usually go through some sort of logon
procedure, telling the dispatcher what the id# for their handheld radio,
what vehicle they're in, what shotgun they have, and in some cities,
pager#, cellphone#, laptop computer#....

at the end of the logon procedure the id#'s for the devices / units are
paired up with the officer that logged on with them. every time the
officer unkeys the radio the packet burst is sent with the radio's id#.
the computer at the dispatcher's workstation decodes the packet burst
and show's the officer's individual id on the screen.

the problem you have with the handpacks always sending a data burst on
all channels while the vehicle radio only sends it on the main
frequencies it was assigned to is a firmware difference between the
handheld and the vehicle radio. the vehicle radio has different
capabilities than the handheld. one of them is the ability to select
which channels will have an ID burst sent on them and which ones don't.
most handheld radios, however, usually have the firmware setup in such a
manner that either the data burst is transmit on all channels or none,
with no in-between options. i guess it allows the manufacturer to use a
simpler chip in the handheld for cost-savings or something like that.

I'm looking at the new Beartracker BCT7 from Uniden; it's claims to alert the user when you're within 3 miles of a police radio mobile extender unit. Does anyone know how well these work, especially the mobile extender detection feature? What antenna would you recommend? Thanks.

3998. Computer controlled scanners

Newsgroup: rec.radio.scanner
Date: 1995-09-13 00:00:00 UTC
From: frisbie@flying-disk.com
Message-ID: <1995Sep13.103944.589@flying-disk.com>
Source record: 249319

I would like to know what scanners are available that are designed for computer control. My application is to monitor a list of frequencies (or, alternatively, a frequency range) and log the activity. Signal strength indication would be a plus. I don't want to "park" on an active frequency, just note that there is activity and move on.

I know that Bill Cheek documents how to modify the PRO-2006 for computer use, but I would like to know what the professionals use for this task. Since I already have an AOR-1000, I don't need another handheld, so am looking for a desktop unit. Software would be nice, but I am perfectly capable of writing my own, given reasonable documentation.

If the (modified) PRO-2006 turns out to be the best choice, is anyone interested in selling me one? (Unmodified, as I prefer to do my own work.)

I've had the BC200 and now have an AOR8000. Dollar for dollar, the BC200 was one of the best ever. Built like a proverbial outhouse, easy to use and a solid all around performer. I paid $200 for mine and it was a great deal. To compare it to an AOR8000 is nearly impossible, however. The AOR has a lot more features, programmability and so forth. As for performance, it can't be beat.Reception in my area is far superior but I had to buy a new antenna to find that out. The one that came with the unit has about as much gain as a wooden stick. I switched to a Diamond RH77 and it's made a world of difference.

In article <4350qi$qq6@newsbf02.news.aol.com>, ec222@aol.com (EC222) wrote:

Only a few are sold with a computer interface.
The AR8000 and AR2700 are the only handhelds I can think of
that have computer control.

As for base scanners:
Icom R7000, R7100, R9000
AOR AR3000(A), 2500 (avoid this one)
Uniden MR8100 (limited interface)

If you want to add a computer interface, go with a RS Pro-2006 setup
with the Optoscan 456 and/or Cheek's CE-232 interface.

I have my R7000 and AR3000A controlled by computer, but not my 2005.
The R7000 works better under computer control than the AR3000A.

I have a friend that is interested in selling his Pro 43. It is alterable and in excellent condition. Willing to part with it for $300 US.

I work at a Radio Shack near Vancouver. Contrary to popular opinion the Pro 43 and the Pro 2006 are not discontinued. However the word is that they will be soon. The sale that was just on was simply a regular sale. I have no idea when they will be going discontinued, however they are not listed in the most recent catalogue. For right now I can get an unlimited supply of Pro 43's and 2006's . . . all alterable. I can even have them altered for you if you prefer. Please contact me via my e-mail address
ddueck@uniserve.com

Thanks

You took the words right out of my mouth!!!

I bought a 12A3 Pro-51 on sale at RS 2 months ago for @$219. If ANYONE
out there will give me $350 for it , It's yours . and I will pay
shipping. I might even consider delivering it myself!! :)

Before buying one of these new "alterable" scanners, make sure that it really is. Any pro43 with an " a" prefix to the s/n is, as far as I know, not modifiable. I opened the first one I saw up and, lo and behold, the diode was no longer on the board. It may be that someone has come up with a new mod that isn't posted here. If so, PLEASE POST it here!!

or: email it to jim.dean@sid.net

Gee, this is really interesting. When I was about to order Scan*Star Commercial, I asked you (on
Compuserve HamNet) if there was a Windows version. You responded that there was no plans to ever
offer a Windows version because in couldn't possibly give adequate performance. A long thread
ensued with no movement on your part. What changed your attitude? And will those of us who purchased the DOS version be offered an upgrade? Is it also compatible with Win95?

TIA

Its apprent this guy doesn't understand anything about how the LAW works....
Ofcourse its ILLEGAL to monitor Cellular and Cordless telephone transmissions, that fact can NOT be disputed, the reason being that NO ONE really cares if you "mind your own business" while monitoring seems to work. The law was put in place for only one single purpose, and thats criminal and civil action against someone who is using the phone for such, ie. you monitor a call about a drug deal on cell, you know who it is, you know what time and where thay are going to be at, you know whats going to happen and how, but, THIS INFORMATION is now subject the the Communications Privacy act of 1986, any and ALL information is void in a court of law, law enforcement can not accept it, and in most times will not if you tell them how you obtained the information, and if you DO inform them as a "good citizen" you could be reported to an FCC field office, and charges brought up against you for breaking that LAW. This is why this law has been passed. No one can never tell when you are monitoring a telephone call, everyone who owns a phone should "beware" for personal sake, but as for criminal and civil, thay are protected under this Act. I do hope the person who made such a bold statement as "its not illegal" will read this and TRY to understand just exactly what it is I and many others have been telling him and others like him.

Please not that these spray cleaners will provide an immediate solution
to the crackling volume pot problem. They are not a permanent solution.
Your problem will eventually come back and more spray will be required.
The best solution is to replace the volume pot.

Get a copy of Southern California Police call at Juns Radio Supply on Sepulveda Blvd in Culver city. This is a much better publication than the Police Call that is sold by Radio Shack. It will cost $10.00 at Juns and has the information you requested broken down by area and LAPD division. Also you will easilty find frequencies for fire, CHP, and LASO.

4029. NC Highway Patrol Freq?

Newsgroup: rec.radio.scanner
Date: 1995-09-14 00:00:00 UTC
From: hblakney@hr.house.gov
Message-ID: <hblakney.289.003187F3@hr.house.gov>
Source record: 249214

Anyone know the frequency used for the North Carolina Highway Patrol (State Police) around the Outer Banks area (Avon/Buxton)?

I've tried listening to 42.7 (F-9) and 42.5 (F-10) but hear nothing. These two frequencies are printed in police call as being for Troop A out of Williamston. I've also programmed in 42.78 and 42.62 for Troop B just in case and still no luck. I've even done periodic range scans of 42.0 through 45.0 and still hear nothing. I can receive the local (county) police channels no problem, but they are much higher frequencies.

I've seen the antennas used on the state police cars and they are definitely a long wavelength so this seems to validate the printed information. I've seen their radio (from inside the car...oops) and they had a "mode" selector button on the front. humm?

I use a "universal" antenna that is optimized for the higher bands, but I can hear local Govt. vehicles that use 39.1 (but they are usually close by).

What may I be missing.

Thanks in advance
Harold

In Shortwave Magazine, July issue, p.23, AOR UK has given some good tips on increasing the scan speed on the AR8000. It's recommended to use a small frequency range with the frequencies programmed in ascending order, and then start to reduce the PLL LOCK and SQUELCH DETECT times until you either get PLL ERROR or the receiver fails to stop on busy channels. You then increase the value slightly and try again. They do stress however that the results using this procedure will vary between units, and although the settings are not practical for general scanning some increase in speed can be obtained when looking at a small portion of the spectrum.

Actually, the law was passed at the request of the cellular service providers. They were concerned that once the word got out to the public that it was possible to monitor these analog, unscrambled RADIO SIGNALS with a scanner, it might have a negative effect on sales. So, their high-paid Washington lobbyists convinced Congress to pass a law, restricting your right to monitor these analog, unscrambled RADIO SIGNALS. They figured this was cheaper than having to incur the expense and bother of scrambling their signals.

Another fine example of how Congress acts in the interest of the high-dollar lobbyists, and not the common person.

Trying to sell a BC8500XLT for $450? Why would I do that when I
can buy a brand new one (no, they weren't discontinued due to
the Privacy act of '93) from Scanner World for $299.

Well, we looked at the situation and decided that we had the technology to solve the Windows performance problems. The world seems to be getting sucked into the black hole in Redmond, so we decided to take advantage of the situation rather than be left on the sidelines. Signal Intelligence is in this business long term.

And YES, it works on Windows 95, and YES we are offering a discount to prior customers.

Download the DEMO from our WEB site: www.scanstar.com.

Well, we don't have plans for any UNIX versions, and the Windows version won't work in an emulated environment, and neither will SS Commercial. SS Professional might work though.

>Can anyone elaborate on the use of the 8000 with the computer and
>Scanstar or the 8000 with other software?

>thankd
>-dan

The issue actually has nothing to do with Scan*Star -- it's just that the AR8000 will overload when you hook it up to an external antenna. You need to use an external antenna because you don't want the antenna near the computer, or it will pick up too much hash from the PC and display. Most people use Scan*Star to manage the memory contents, but find that the radios performance limits it's usefullness as a computer controlled radio. The 8K was designed for battery life and the front end suffers.

4040. Heatkit GR-740 Scanner

Newsgroup: rec.radio.scanner

It does excellent on the military UHF band. If military comms will be your primary target consider the Uniden BC9000xlt. It has a far superior search/scan speed and it AUTO SEARCH/STORE is vital for unattended hunting of some elusive mil comms. The 2006 and a good mil freq directory will do well, but for serious speed in searching/scanning, and the remote taping capability, the 9000 can't be beat, IMHO.

From: chris@lvld.hp.com
Message-ID: <43a0mh$a9m@hplvec.lvld.hp.com>
Source record: 249233

I purchased a Garmin 45 from Cabela's in Nebraska a couple of weeks ago, and I love it. I have seen magellans and Eagles, but chose this one for the following reasons:

1. Has NMEA and other Datacomm capability for differential GPS and interconnection with a PC, map software, etc.

2. Was only $299.

3. Has a simple but well designed used interface.

4. Has many functions like track log, 768 waypoints, multiple "routes" memory composed of waypoints.

5. sensitive receiver capable of tracking 8 satellites simultaneously.

6. Time and altitude readout (not on many marine versions) on main screen.

7. removable antenna to allow external antenna on vehicle.

8. Jillions (really! about 2.5 jillion) variables for data format, scales (metric, statute, nautical), etc.

9. Easy to use.

10. fits in shirt pocket without tearing shirt.

11. easy to use.

12. small and lighter than most others.

13 easy to use.

My opinion for what it's worth. I have been coveting a GPS since they dropped below $1000, and this is the nicest unit in the $300 range I have found. Some units now are availab;le for $199 (magellans) but I didn't like their user interface.

Chuck,

Now that you mention it, when the DPS frequency in our area was locked up a while back, one of those tones (I now assume they're all different, depending on the officer) was keying, and another trooper said he wondered if (this other guy's) "A & I" was locking up. I'll bet what he really said was "aNi" -- Automatic Number Identification!

Thanks Chuck!

Most AR-8000 reviews recite as fact the 30 ch/sec scan rate from the
AOR ads and manual, but I think the actual scan rate is *much* slower.

Did you actually measure a 30 ch/sec scan rate for the AR-8000?
>I tested a AR-8000 recently and it scanned about 16 ch/sec
>with a reasonable mix of unsorted frequencies in two linked banks.

>The highest rate I measured was about 25 ch/sec when I programmed
>*all* the channels in a bank to the *same* frequency and mode -- an

>The AR-8000 I tested is the slowest scanner when tested against
>other current portables (BC3000XLT, PRO-26, PRO-60, PRO-62, AR2700).

>AR-8000 test results will appear in a future issue of Monitoring Times.

I have timed the AR8000 and I agree with the 25ch a second speed. Putting
in the frequencies in a asending numerical order helps too. I had a
BC3000XLT for about 3 days till I shipped it back. Speed is just not that
important to me, the BC3000XLT has a very small display, reception not as
good as the AR8000 and poor battery setup. The BC200XLT was the best as
far as battery setups, mine would run for about 12-14 hours!

>anyone know how well these work, especially the mobile extender detection
>feature? What antenna would you recommend? Thanks.

I have a simular scanner the Bearcat BC350a, which I only paid about $80 for factory reconditioned. Great little scanner. Biggest problem is there is no number key pad. Makes it hard to recall specific frequencies or input them. Out here in California the mobile extender does work- if the officer has his on and if there is radio traffic. It has saved me from a couple of tickets. A good antenna from any of the catalog companies like Grove or Tucker should do nicely. If you don't want to make your car look like a cop car try using your exsisting antenna with a spilter.

Time signals are only broadcasted on shortwave. They are not brodcast on
VHF/UHF. Therefore, you will not be able to receive time signals on your
BC890.

the Texas Dept of Public Safety can be heard on:

155.460 usually base to mobile and car to car..
154.680 mobile to base.
155.445 referred to as ch 7..used in areas where 155.460 get
interference from anohter city. This can be a repeater.. if it is..
is has 154.695 as an input.. if you only hear the base on here tehn
check for mobiles on 154.680

159.210 is a mobile repeater .. again this is also used a as a
repeater for both base and mobiles in urban areas.. the input is
154.665 with different PL tones so they don't hit every repeater
across the state.

159.090 input is 154.935 uses mostly by CLE which is Criminal Law
Enforcement.

154.950 is statewide mobile intercity
155.370 is statewide base intercity.

155.505 is also CLE input is 154.920 Everything that is not highway
patrol is on here.. such as lotter commision, racing comission, texas
Rangers, CLE etc tec.

155.475 is nationwide law enforcemnt and I have heard DPS talking on this
one too.. car to car.

DPS has been using dash mounted cameras.. which means the officer my
wwear a wireless microphone ..so if you pass a trooper on a traffic stop
try 173.075 or right around that area.. to see if you can hear him..

good luck..

In coastal areas around the beach (salt conditions) volume controls and contacts get a lot of corrosion and cleaning with contact cleaner only helps for a short while (1-2 months at best). As suggested to me, I've started using WD-40 "lubricant" and this *appears* to solve the problem for a longer time (1 year so far). I thought this would attract dirt, but so far it looks like a good fix.

After going over freq. deployment map the info I preveously gave you is
not correct. The Freq assignment for Dare county is 42.70 and 42.50.
And as you said served out of Williamston.

Yes, ANI is a digital stream that allows the dispatcher to see what unit is transmitting. For instance, if Trooper 286 were transmitting, the dispatcher at the post would see "286" on the display.

10 codes vary from state to state, but more common ones: 10-1 : Radio
sounds bad. 10-2 radio is loud and clear. 10-3 switch channel. 10-4
acknoweldged. 10-5 ? ?? 10-6 busy. 10-7 out of service. 10-8 in
service. 10-9 repeat. 10-20 location. Code 1 at your convience. Code
2. Lights. Code 3 lights & siren. Code 4. Situation under control.

Although wrapping yourself in aluminum foil is probably on the right track, one thing that MUST be done is to provide a ground connection so that the radio emissions can dissapate before being received by the other parties. While this could be accomplished very easily at home using a normal ground rod/mat combination attached to an aluminum tent, travelling could be a problem.

I would suggest fashioning a harness of some type to allow a common lead acid automobile battery to be carried. attaching the foil shielding to the positive post (remember which way the electricity actually flows?) would allow the extraneous emissions to be safely stored until such time as they could be disposed of by grounding out the battery.

Should you observe the battery becoming overcharged while travelling, immediate discharge of some energy could be necessary. I would suggest connecting the battery to some type of load to release the stored energy. Finding such a load should not be difficult. I suggest using the emergency warning lights on a police car. Simply find an unattended police vehicle, cut the power wires going to the light bar, and attach your battery. This will very quickly dissapate this energy, and will have the added benefit of scattering the transmission as the lights rotate, making reception nearly impossible.

In all seriousness, right now, bugging someones thoughts is impossible due to the complexity of the transmitted "brain waves". There have been experiments done though to see what the effect would be of bombarding humans with mammoth radio signals though, which usually resulted in confusion and headaches.

WWV does not have Time stations on VHF/UHF for scanner listeners,
however, many Public Safety (Fire/Police) stations do identify
hourly or quarter-hourly with their callsign and time, usually in
24Hr notation.
(Gee, maybe the National Weather Service stations should pop in a
time check between weather spots)

4078. DOA Bearcat 250

Newsgroup: rec.radio.scanner
Date: 1995-09-14 00:00:00 UTC
From: "Michael J. Linden" <gmlinden@bgu.edu>
Message-ID: <79550.gmlinden@bgu.edu>
Source record: 249263

I've got a Bearcat 250 (modem BC-250) that is dead in the water. Keyboard and display are completely unresponsive (only a small decimal point lights up on the far right of the display when unit is turned on). The unit does produce 'hash' if volume is turned up a bit and the squelch is turned down.

Inside, the regulators on the RF and digital boards are running extremely hot (smoke marks on the pc board and components near them). Story was that it was placed in the basement for a few years, when it was brought up and turned on again, it wouldn't work.

Anybody have an idea what the problem might be. This sounds like it might have been a common mode of failure for this older scanner.

Any input would be appreciated.

Why pick on Radio Shack?
In the last few days...
I asked a mechanic at a gas station what the octane rating of his unleaded regular was. he didn't know.
I asked the manager of the local Smith's grocery store what the caloric content of a 2-ounce serving of a certain ice cream was. He didn't know.
I asked a salesman at a local SILO what the difference between "concert hall" and "stadium" was, on the Dolby settings for a high-end stereo receiver. He didn't know.
In the local Circuit City, I asked what "Digital Ready" on a pair of headphones meant, since the signal to them was analog. He didn't know.
Radio Shack has no lock on people who don't know as much about a specific product as you or I do. In a store like Radio Shack, it's impossible for one person to have specialized knowledge about all the products. So, you know what a gender changer is, and he's not a computer guru. So what? Does that mean he's ignorant? I'll lay you money to donuts he knows much more about what's in that store than you do, even though you may know more about specific things like scanners and computers.
Remember, to *you*, your are terrific. To *any* sales person, you are a potential customer, one of literally thousands, and nothing special in that category at all.

Not as such in the US. However, here in Phoenix, both the Fire Dep't and
Police will give the time quite frequently, as reference points on the
recording tapes. I would imagine most other such departments would, too.

B> 30 thousand feet, better safe than sorry.

Something to consider:
Much of the wiring on commercial planes carries multiplexed data, and are not discrete lines. All it takes is one birdy at the wrong time to insert a signal on a line, and something gets the wrong signal. Maybe only something like a warning light, that can be checked, and maybe something like a rudder controller that throws the plane for a loop (hopefully not literally!!). The kind of shielding you are talking about is very heavy, and the aircraft designers would rather curtail your fun than their sales.
Consider also: there have been a *lot* of people here, and elsewhere, who have said that "all it would take is a little shielding." By now, you would think that, if that's all it took, the designers would have put it in by now.
Maybe, just maybe, they have reasons for *not* putting it in.

RI> transmit intermittently)?

You bet it is!
I use a grove SDU with an Icom R-7100, and it works great. For HAM monitoring, it's a snap; just tune to the middle of the band, set the display for the approximate same width as the band, and go to it! When you see a signal pop up, tune to it! Works like a charm. Will even find signals on freqs where there aren't supposed to be any. Just tune to any band you want to monitor, and watch.
For those bands with a lot of activity, it's better (IMO) to simply program the wanted freqs, and scan them. However, the spectrum analyzer can be used to find out what those *other* transmissions are, by tuning to the freq's you don't have identified.
A little expensive, but if you are really interested, it's a great help.
Have fun!

BS> Any response would be greatly appreciated. Thanks in advance.

There are specific products to do this. Any decent electronics store (I
don't know about Radio Shack for this, tho) will carry them
WD-40 can be uses, if uses sparingly. I know that some say no, and they are
entitled to their opinions. The main complaint about it seems to be that it
all evaporates, so leaves no lube behind. However, I tried this out: spray
some WD-40 on a mirror. Now, don't clean that spot on the mirror for a
while, and you will notice that it does NOT all evaporate; it leaves a film
of oil behind. Don't take my word for it, try it yourself. The can *I* used
left an oil film behind.
Of course, that's not what WD-40 was designed for, so use your own
judgement.

Then, you want a CB. A scanner will only tell you where the police are actually doing something. A CB will let you know where they ARE. There's a big difference. The truckers will let you know where the police are, if they are anywhere near. A scanner won't do that, unless THEY talk, which they don't do often.
Have fun.

>simply "A MOTOR". A salesperson is NOT an EXPERT in EVERYTHING
>IN THE STORE!(no I'm not a saleperson I'm a LAN MANAGER and I get
>the same beating)...THEY are SALESPEOPLE THEY SELL, THATS IT!

Sorry but that's no excuse. A salesman is responsible for learning
about one's products. Sure, that's alot to know but when you take a
job you just don't sit back in ignorance. You are expected to learn
and grow to make yourself more of an asset. When you go to a grocery
store I expect the employees to know where things are or who to ask.

I worked in many jobs (building supplies, electronic parts, insurance,
etc.) while in college and in all of them I was EXPECTED to either know
or find out. All at minimum wage.

Why is RS any different? I EXPECT service, that's why I'm spending money
there.

Personally, if I don't know something I sure as hell try to find out.
That's what I get paid for. How about you?

>
>If so, can someone recommend a good hand-held (inexpensive of course) model that would do this, or
>do all models do this?

You simply need a scanner that will operate on 118 to 136 Mhz. A scanner would have very limited use for a pilot as a backup communications device simply because it is only a receiver. However in the event of complete on board communications (eg: electrical) failure it may be better than nothing.

Icom and Bendix/King have been making hand held aircraft transceiver that would be a better choice. Even Sporty's Pilot Shop (1-800-LIFTOFF) has a private labled, hand held. The prices range from about $250 to $600 depending on what you want.

I have an Icom IC-A21. They were just discontinued but you can still buy them from dealer stock. They list for $499 but I would bet they are discounted now. I got mine in "never used" condition from a fellow piolt for $350. The A21 has 720 comm channel ability and a 20 channel memory. It can scan the 20 channels. It also receives nav stations (VORs) and has a course deviation indicator with omni bearing selector. The nav function and reliability is limited - but in an emergency it can help.

So with that in mind, yes a scanner has a use as a monitor (if you want to listen to the ATIS on the way to your plane). But I wouldn't buy one thinking it was a very good backup device for a pilot's needs. The real aircraft hand helds can give a pilot a lot more piece of mind.

If you want to avoid spending the money on a radio that can only be useful for a pilot. Consider a cell phone. You can probably find a lot of uses for one away from the airport. However (before people start jumping up and down about cell phones on planes) the use of cellular phones on board any aircraft when airborne is illegal - they must be turned off when you are flying. But in a communications emergency - as in the aircraft systems required for safe operation have failed - all rules can be thrown out the window as the pilot deems necessary. If you

saw rescue 911 this week, they recreated an event where a pilot used a cell phone in a bonafide emergency.

If you have no idea what I am talking about - pass this on to your "SO". He will probably understand.

Adam,
I think the AOR radios are a good value. There are a couple ways to go as far restoring cellular. One is to buy the AOR radios from a dealer in Canada, since they don't have those band restrictions. The other is to buy the Optoelectronics CX12AR and software from RCSI, ScanStar or ScanCat and program the radio so that it receives in the 800 MHz band. One thing to note, the CX12AR will allow you to control the 2700 and the 8000 via the computer. So, I suppose you could kill two birds with one stone with the CX12AR. Also, the other reason I like the AOR radios is that they're the only handheld radios that can interface with our Scout for Reaction Tune. This means that the Scout when interfaced with one of those radios will automatically tune the radio to the frequency it (Scout) captures. By the way, I happen to think the 8000 is worth the extra money.

Sincerely,

Kevin Cox

I currently have the following items FOR SALE:

1. Bearcat BC-300 50 channel programmable scanner. Has service search feature that will find up to 2100 active frequencies. It needs some work done with the memory and display, but I have never sent it in to Bearcat. I just had it sitting in the closet..probably could be a good scanner if someone wanted to send it in, or had the knowledge to repair it themselves. Unit needs a new screw in antenna for the top. $25 + UPS COD Shipping takes it.

2. Turner Supersidekick CB Radio Desk Micorophone. Has volume controls and lock-down button. In good shape, and worked fine with CB base about 2 years ago. $10 + shipping takes it.

I also have 2 digital pagers, 2 lowband-VHF mobile units, 1 high-band VHF mobile unit, an on-site paging system, and some portables (good for parts) for sale. If interested, please inquire to my e-mail address. Thanks.

Paul

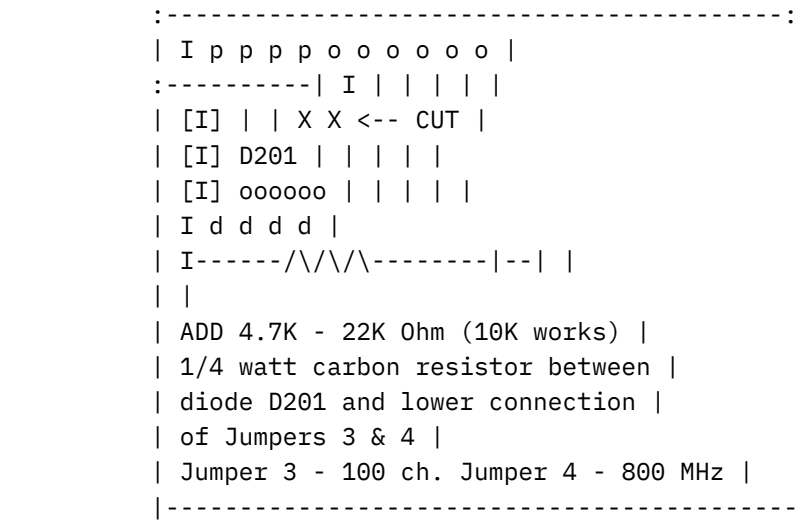
I have tried to modify BC855XLT according to the following instructions but I was not able to locate D201. Also my scanner have a set of two connectors with 6 to 10 wires in each. Is it a different model board of BC855XLT? Does anyone else had the same problem.

Tanzeem
ktanzeem@megaweb.com or
humanaz@aol.com

UNIDEN BC-855XLT MODIFICATIONS
Scope of modifications:
[1] Allow continuous 800 MHz receive.
[2] Increase channel capacity from 50 to 100 ch.



1 2 3 4
I p p p p o o o o o o
I
[I]
X X <-- CUT
[I] D201
[I] oooooo
I d d d d
ADD 4.7K - 22K Ohm (10K works)
1/4 watt carbon resistor between
diode D201 and lower connection
of Jumpers 3 & 4
Jumper 3 - 100 ch. Jumper 4 - 800 MHz

1. Remove 5 screws from bottom of scanner case.
2. Carefully separate case top and bottom.
3. Unplug connector to the internal speaker.
4. Locate diode D201 and 4 jumpers near edge of circuit board.
5. Cut the 3rd and 4th jumpers near the middle and fold downwulate leads, if necessary.
6. Connect the lower part of jumper 3 & 4 to one end of a 10K Ohm 1/4 watt carbon resistor, insulate all exposed leads.
7. Connect the other resistor lead to the lower connection of diode D201, DO NOT cut any leads on D201.
8. Make sure all exposed leads aren't touching any other connections, insulate as required, tack in place with a dab of RTV silicone, or low temp hot glue.
9. Reassemble scanner, make sure to plug the speaker back in.
You should now have a scanner with 100 chs. numbered 01-00 ï¿½

in 5 banks of 20 ch. and continuous 800 MHz coverage.

Haven't heard that one before. It's likely that the dispatcher is turning off the repeater so the cruiser-to-cruiser talk isn't rebroadcast. Try tuning in the input channel to the repeater.

A variation is that the cruiser's talk channel is the same as the repeater input channel, but without the PL subaudible.

Mike; While I don't work at RS I have worked in a consumer electronics store. We did bend over backwards for the customer who gave us the respect and courtsey we deserve. However if you or some of these other sniveling whiners came into my store demanding that even though they had just bought a $2000.00 stereo that we should give them free speaker wire (stereo sold at a few dollars over cost, most likely). I would tell them NO.

RS is a business. They have rules (most of which are imposed by the corperation, necessitated by lawyers afraid of liable suits) which they are obliged to follow. Reguardless of whether we feel it is a good rule or not the employee must follow it or become unemployed. Try it at your work place, see if breaking your employers rules is worth more than your job.

As for their knowledge, ask your self how long did it take you to gain the "superior" knowledge that enables you to be smarter than the Rs employee? Second would you work there for what RS pays. Last time I looked Mc d's paid better and you could eat the product you were selling. (although they have rules as to how much). Ask a RS employee how much of a discount (if any) they get on RS merchandice.

Also remember there are peoplr out there who don't have the knowledge you or I do and in their case RS does have the answers. And last but not least I see that a lot of those who posted mentioned that they had purchased RS scanners. Something about RS must be right. 'nuff said.--

4109. Voice Recorder Question

Newsgroup: rec.radio.scanner
Date: 1995-09-15 00:00:00 UTC
From: ajax@well.sf.ca.us
Message-ID: <43cnbi$b0s@nkosi.well.com>
Source record: 249152

I'm new to the world of scanning, having just picked up a
PRO-46. I have some questions...

- I wanted to get a VOX recorder at Radio Shack. I want to
be able to connect the earphone jack from the scanner into
the mic in jack of the VOX unit. I understand that there is
a cable for this, but the droid at RS said that the VOX
feature didn't work if you bypass the internal mic. This
seemed rather strange to me. Does anyone have any experience
doing this?? I was looking at the CTR-96.

- Does anyone have any experience with Cellular Security Group?
I'm considering sending the PRO-46 to them for mods. I looked
at the inside of the unit, but I'm not experienced enough with
electronics to attempt this one.

and some comments....

- I tried the PRO-51 keyboard mod on the PRO-46 and got
test freqs, but only up to channel 18 and no *magic* freq.
I did find other keypad combos that would yield the test
freqs, but always with the same result.

- RS has had the PRO-51 on sale for $217 for a while. I stopped
by today and they said they would still give me the sale
price. The date code on the floor model was 7A4.

4110. Radio Shack Freq. counter?

Anyone care to share opinions about the Radio Shack freq. counter?

I noticed it's somewhat cheaper than the rest, is this a clue?

I'd like to get one to help find freq. while out and about.

How does it compare with something like the Scout?

The FLTSATCOM (UHF) freqs are roughly 243 to 265 Mhz. Transmission modes vary from narrow band FM, SSB, wide band FM to you name it. Occasionally you will hear narrow band FM voice in the clear.
Although most FLTSATCOM traffice is in the 243 to 265 Mhz range there is occasionally traffic on other freqs in the 225-400 Mhz range too.

The 1500-1530 Mhz freqs mentioned above are the civilian Marisat commercial maritime downlink freqs, more precisely 1537-1541 Mhz.

4112. Uniden Bearcat BC855XLT Mods (Longish)

Newsgroup: rec.radio.scanner
Date: 1995-09-15 00:00:00 UTC
From: jmccarty@spd.dsccc.com
Message-ID: <43cp39$bqk@sun001.spd.dsccc.com>
Source record: 249155

Concerning the Uniden Bearcat 855 XLT scanner:

Summary:

Two useful keyboard hacks are described. One loads test frequencies, the other resets all channels.

By making hardware modifications, four different independently performable modifications to behavior are possible. Each can be done by cutting and redirecting a jumper. Soldering is required. The four modifications are

(1) doubling the number of channels from 50 to 100,
(2) unblocking cellular,
(3) replacing the 29-54 MHz band with a mediocre 66-88 MHz band,
(4) completely blocking 806-960 MHz.

Doing any of these modifications results in loss of all programmed frequencies and scan limits.

Background:

According to Marc Saxon in "Scanner Scene" in Popular Electronics, November, 1995 the BC-200XLT, BC-205XLT, and BC-950XLT are all modifiable. The BC-2500XLT can be modified if the manufacturing code on the unit does not end in OBID, other codes ending in D are ok. The BC-700A, BC-700XLTA, BC-760XLT, BC-855XLT, and BC-890XLT are all modifiable if the manufacturing code on the unit does not end in D. No other Bearcat scanners can have their cellular reception unblocked. I do not know how accurate this information is.

I have been unable to obtain information about the modifcations possible for the BC855XLT unit, other than rumors that they exist, involve jumpers, and could open up the cellular frequencies and double the number of channels.

I purchased a BC855XLT at a Pawn Shop for $40 and successfully modified it by simply experimenting. The date code does NOT end in a D. This document contains the results of my experiments with this scanner.

Keyboard Hacks:

I tried all 385 possible combinations of three keys held down while turning on power. Only three significantly different behaviors were discovered:

MANUAL-0-E Load test frequencies

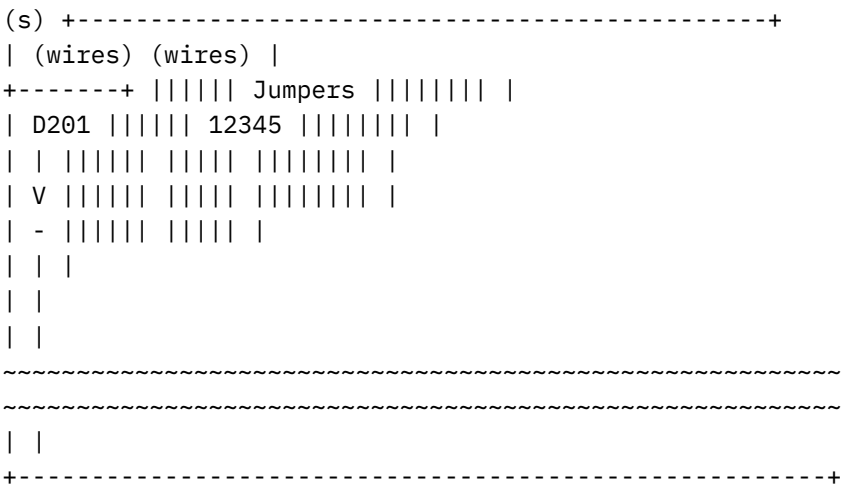
SCAN-0-E Clear all channels to frequency 000.000
Mark all channels as locked out
Clear the search frequency limits

(forget) Clear all channels to frequency 000.000
Mark all channels as NOT locked out
Clear the search frequency limits
(if anyone -really- thinks this is a useful
feature, I have written down somewhere what keys
these were and could look them up)

Hardware Hacks:

First, unplug the power from the back of the case, and remove any antenna connection. Turn the unit over. Carefully remove the five screws holding the case closed. As you open the unit, be careful as there are thin wires connecting circuit boards on the top of the case (the microprocessor/control board) and the bottom of the case (the receiver proper). The wires leading to the speaker should be disconnected (be sure to pull on the connector, not on the wires).

Now lay the botttom of the case on the left, and the top of the case on the right, with the circuit boards uppermost, and the back of the case (with the power and antenna connectors) away from you. Look carefully at the microprocessor board (on the right) and locate the parts and jumpers as shown on the diagram.



In this diagram, (s) represents the speaker, (wires) means several colored wires going to the other board, D201 is a diode marked D201 on the board, and Jumpers 12345 means bare wire jumpers which I (arbitrarily) numbered 1 through 5. The tildes (~) represent a large section of the board which is not depicted.

Each jumper has two ends. The end near where I have Jumpers and 1-5 marked on the diagram I will call the "top". The other end (down toward the rest of the board, or the front of the case) I will call the "bottom". The "bottom" end of each jumper can either be connected across the top of the board (the way it is shipped) or to an alternate

pad located on the underside of the board. Look below and determine which of the options you wish to change, and move the corresponding jumper to the alternate connection point.

Carefully remove the (was it 11?) screws holding the processor board to the top of the case. Carefully remove the processor board, and turn it over, from right to left. This leaves the notch for the speaker at the "upper right". You can now locate the pads underneath the jumpers. Each jumper passes through the board, and is soldered to a pad. Just above these pads are other pads, one for each of the jumpers which I numbered 2 through 4. To change the state of any of these four jumpers, cut the jumper on the top side of the board, and jumper the "bottom" end to the corresponding pad on the underneath side of the board, thereby connecting it to its alternate location. Remember that the jumpers are now numbered 54321 from left to right.

Jumper Connection Effect
------ ---------- ------
2 Across Top enables 806-960 MHz frequencies
Underneath disables 806-960 MHz frequencies

3 Across Top enables 29-54 MHz, disables 66-88 MHz
Underneath enables 66-88 MHz, disables 29-54 MHz

4 Across Top enables 50 channels 5 banks of 10 each
Underneath enables 100 channels 5 banks of 20 each

5 Across Top disables cellular frequencies
Underneath enables cellular frequencies

The reception on 66-88 MHz was nothing spectacular, but it was ok. Probably changing some coils in the front end would improve reception. One could add a switch to change this at will. But note that I found that modifying any of the jumpers cleared all frequencies when the processor was next powered up.

I don't suppose anyone wants to completely -disable- all 806-960 MHz reception, so I'll assume that you will perform the modifications to jumpers 4 and 5, possibly 3. This table summarizes the results:

Before Modification After Modification

29 - 54 MHz 29 - 54 MHz (or 66 - 88 MHz)
108 - 174 MHz 108 - 174 MHz
406 - 512 MHz 406 - 512 MHz
806 - 956 MHz (cellular blocked) 806 - 956 (continuous)

50 channels 5 banks of 10 each 100 channels 5 banks of 20 each

Turn the processor board back over, and carefully rethread the screws which hold down the board into the holes, and tighten them. It is best to turn them backwards in the holes until the threads re-engage. If you do not do this carefully, you will soon have holes which take a larger size screw. You have been warned. Also do not overtighten. Tighten only

enough so that the board is held snugly.

Now fold the case back together, and re-attach the speaker wire. The connector only goes back one way. Be sure not to pinch any wires between the halves of the case. Also watch for bundles of wires wrapped around or stuck between the volume and squelch controls.

Carefully insert and tighten the five screws holding the case together, following the instructions listed above for the screws holding the processor board. Reattach the antenna and power supply.

Disclaimer:

Intercepting transmissions in the cellular band is illegal.

The reader is responsible for determining the suitability of attempting modifications.

In other words, you are responsible for whatever you do to or with your scanner, and I am not.

The other day, I saw a Radio Shack ad which listed the PRO 2035 at a clearance price.
Does anybody know why they're discontinuing this model?
I purchased one several months ago, and have been very happy with it, but I would like to know if there is some problem with it.

Thanks,
David Branson

4116. Antenna for 900 Mhz cordless phone / how to ground coax

Newsgroup: rec.radio.scanner
Date: 1995-09-15 00:00:00 UTC
From: tmorrow@oracle.com
Message-ID: <TMORROW.95Sep15163128@ap368sun.oracle.com>
Source record: 249159

I have a 900 Mhz cordless telephone that I would like to extend the range of, by adding an antenna to the base unit. My plan is to run some coax cord from the base unit up to an antenna mounted on my chimney or something. Yeah I really am serious: I want to both transmit and receive on this, not just hook up a scanner.

Do you have numbers for manufacturers that sell suitable antennas? What are your recommendations for particular 900 MHz antennas?

Also, the base unit for the Uniden 9200 phone currently doesn't have a coax jack. I was thinking of adding one by connecting the tip to the circuit board where the current antenna goes on. But where should I connect the sleeve (ground)? Can I connect it to my grounding pin on an electric outlet? Should I try to find a ground on the circuit board?

Please send email; I will summarize.

Which one ?

The PRO-2035 sold in the USA/Canada cannot be modified for cellular - as guessed. The same radio sold here in Europe is full coverage with no gaps but uses a different main CPU.

Hi, I don't have experience with the CTR-96 model recorder, but I do have an older RS VOX recorder that works just fine using the external microphone jack. You might try testing it at the store, just plug in an external microphone and see if the VOX circuit works. If the RS salesman won't let you do it, try another store.

Source record: 249168

i am looking around to see if anyone has a bearcat 760XLT WITH a CTCSS board installed that they are willing to part with, and if so, what do you want in terms of price? are you willing to trade gear in lieu of cash for / toward the asking price. the unit does not need to be cellular modifiable, as i could care less about the cell band. I will accept a 760 without a tone board, but i do need to have one installed eventually, due to the intermod and rf enviornment i live in. as far as gear i have for trade, i could offer the following...

modified ICOM 2AT, no longer does 140-150, now does 150-160 @ 3watts max.

ICOM H-16 commercial handheld, 16 channel, fully field programmable from the keypad, 130-180MHz tx/rx, odd repeater splits, seperate CTCSS encode and decode frequencies. this radio is in good condition (few very MINOR scratches from use. i will sell with charger and 1000mAh high-power battery, along with two bp-5 packs of questional worth. asking price for package is minimum of $500, but could be negotiable if you're nice)

note: the sale or trade of any items depends on how i feel at the time, as i've been debating this with myself for some time now and still have mixed feelings on the H16.

again, i am mainly looking for the scanner, which is the main purpose of this post. i will sell the modified 2AT without battery pack for a reasonable asking price. if you live in the san francisco bay area, i'll even hand deliver the unit.

Has anyone had any experience with the volume on a RS 2006 scanner gradually dropping (over a period of a couple of years)? I have to turn the volume knob quite a bit higher to get the same volume (no, I'm not losing my hearing :)).

Just wondering if this is an easily fixable problem.

I believe the poster's point was not about ignorance, but about
insufficient data. Since you apparently didn't understand his
"autoparts" example, let's go with your "grocery store" example.

Going to a RS and asking for a "gender changer" is like going to a
grocery store and saying, "I'd like some _food_". It's terribly
vague, and without further information, one does not know specifically
what kind of food (or gender changer) the customer is looking for.

TO> CTIA reports 1.32 million per day in FRAUD across the entire system and
TO>growing like wild fire. The first step to misuse is monitoring.

Actually, I would think that the first step to misuse is having code readers that can pluck the phone numbers and ESNs off the air. Merely listening to the audio of someone's cell phone is not going to further a crime. Other than the victimless crime of monitoring the airwaves. Personally, I find it extrememly boring listening to cellular and couldn't care less about it. However, I hate to see laws banning things, such as scanners.

I have a similar birdy on my SC-150 at 156.150, which is the Pa. state police
mobile frequency in my area. I have found that I can greatly reduce the birdy
interference by programming scanner for 156.155, five kiloHertz above the
actual frequency. There is some loss of sensitivity, but the audio is fine.
Hope that might help you out.

Not only is it not illegal for you to kill someone if you are not
caught, it is also okay for you to kill two people if you can afford
the right lawyers to defend you.

For more information on circumventing the U.S. criminal code, contact
O.J. Simpson or his legal representative, Mr. Johnnie Cochrine.

Hi Chuck:

I seem to remember that there is a time signal woven into
the GOES (for lack of a better term) transponder trigger
frequency at about 400 MHz. However, it would take A LOT
of hardware to capture and decode it. There is also some
sort of time code sent along in the GPS signals in the
1300-1500 MHz frequencies.

From: cgcom@interactive.net
Message-ID: <43aqj2$84t@ruby.interactive.net>
Source record: 249279

Greetings!
I am planning a trip to Florida this fall and was hoping some of the subscribers here might like to share frequency info they may have for any central Florida tourist attractions such as Disney World, Universal Studios, Sea World etc. I am also planning to be in the area for one of the space shuttle launches or landings so any current NASA, Kennedy Space Center and or Cape Canaveral frequency lists would be extremely useful.
I will be staying close to Patrick AFB in the Cocoa Beach area and will be interested in monitoring any unique comms there as well. I will have Police Call Vol 6, Beyond Police Call, Scanner Master's Florida Communications Guide and Monitor America along for the trip, but since time will be at a premium, I am seeking any personal lists of confirmed hits so as to cut back on time spent hunting. This will also be my first trip to the area equipped with my AOR AR8000 and Optoelectronics Scout, so I hope to create a list of my own to share upon return, but for now any and all tips will be greatly ppreciated.
E-Mail replies are welcome. Thank You! :)

This seems like a great idea. Perhaps if a lot of people asked the
NWS, they would do it. Even if they only announced the time on
xx:00, xx:15, xx:30, and xx:45 it would be a useful service
for the "shortwave receiver impaired".

: It wasn't "common law" - it was a ruling by the US Supreme Court. Congress
: has felt the need (for big bucks - most likely) to negate that ruling. Until
: it is overturned by the courts again, it will stand as law in the US.

'Common law' is, by definition, law passed down from the courts. Common
law stands until overturned by the courts or by legislation. The most
recent changes to the ECPA were enacted due to laws passed by Congress,
and overturn the 'reasonable right to privacy' ruling.

: You cannot even listen to cordless phone calls on your scanner - even when
: you are a party to the conversation or have the permission of one party. The
: law is quite restrictive - and stupid.

Read the ECPA. It clearly states that you can listen to any transmission
you want if you are a party to the conversation or have permission from
at least one party to the conversation. The ECPA never says 'you can't
listen to xxx on your scanner', it merely says that 'you can't listen
to xxx'.

What if you heard a drug deal on the cordless or a drug deal on the cellular frequencies and notified the police !! Many small time drug dealers use pagers, pagers just send out a stream of digital bursts..the drug dealer then calls his party back on a wireline phone... yes there ae those who use a radio phone...

hey, I'm going to write congress and tell them to REPEAL any laws we don't need, and ther are lot's of them...if you can't enforce them or don't have the meney for what ever the law calls for..then repeal the law!!

Doesn't matter if it is. They are required by law to provide you with a warning that there will be a charge. By the time they can start that, you would already have hung up the phone.

If they send a billing to your phone company, it is trivial to have them remove the charge - and do a bill-back to the 800 number.

re: recent posts about glass antennas. they seem to be a compromise between something bolted solidly on the roof (good ground, bad re-sale) and using a "rubber duck" (where did that name come from? seems more like a stiff snake) inside the car.

i use the radio shack scanner antenna, and am satisfied. i live in a major market, lots of signals, and the antenna for me is acceptable with my AOR 1000 (a relatively low-sensitive radio) in the car.

i also have a larson glass-mount 2-meter antenna. it works great, and it de-installs in about 10-minutes without a trace. if glass is no conductor, someone better tell my antenna. somehow, my 1.25 watt kenwood 2500 is transmitting through my antenna.

on-glass antennas work. i thought the debate had been settled about a decade ago. the 'in glass' FM antennas were/are junk. but on-glass CB-HAM-SCANNER-antennas DO work. based on my first hand experience.

dejim, in the car with all those antennas

>I mean Grundig <G>.

>I'm thinking of picking up this portable. A few questions

>1. How is the sensitivity with the built in Ant? I'm only interested in the
>big boys (BBS..ect). Is it adequate?

Very good sensitivity. I would not say it is communications grade sensitivity,
but hey, that was not the attempt with this radio.

>2. How does the Sync detector work? Does is rumble if properly tuned?

The sync detector is essentially a way to pick off either the upper or LSB
while still maintaining A.M tone. It is a super nice feature when the band
gets crowded. A similar effect can be seen by simply switching to SSB mode.

>3. Is the sound really that good? Is it overly basey???

Do you mean SW or the FM?
The FM portion pf the radio spared no expense. When I first listened to the
700 with a pair of digital headphones, I was *inpressed*. Fantastic clarity
and seperation.

On the SW side of things...Who wants bass in that band anyway?
BTW...The 700 has a seperate bass and treble control.

All in all a nicely thought out radio and worth 375 U.S dollars, which is the
price I paid.
The only downside is the Ext antenna feature. It has been intentionally
attenuated...Long story.

Later Tom...Hope this helped a little.

Pete

I recently got the latest SCANNER MASTER catalog in the mail and in it
is a item known as a SCANNER BOADCASTER and it states that you can
play your scanner through your car audio system by tuning in to an open
FM channel.
I was wondering if
anyone has used this device and if so did it work well and is it a good
investment?

What are the frequencies for 900 mhz cordless phones.

Also, in my area (10,000 population) I have only been able to locate 16 different active cellular frequencies. This doesn't seem like enough channels to me.

Of course, I only want to know these things to be sure I don't accidentally scan thes Freqs.

>
>Anyone know?
>
>Thanks.

Also - on UHF frequencies - sometimes the frequencies are
paired

ie in 450-470MHZ they are paired with a freq. 5Mhz higher.
453.800 is common in both base and car while
458.800 is only found in mobiles, is not sent through the
vehicle repeater, and is low power (very short distance)

the other option is that perhaps they use a specific frequency
for unit to unit (like a mutual aid frequency, one that all
emergency services across county boundries would have - so that
different departments could communicate in the event of an
emergency).

most of this is detailed in Radio Shack's police call.

>Anyone know the frequency used for the North Carolina Highway
>Patrol (State Police) around the Outer Banks area (Avon/Buxton)?

Highway Patrol

42.620 Ch 1 Base to Car
42.780 Ch 1 Car to Base
42.520 Ch 3 Base to Car
42.800 Ch 3 Car to Base
42.600 Ch 5 Base to Car
42.660 Ch 5 Car to Base
42.640 Ch 7 Base to Car
42.760 Ch 7 Car to Base
42.500 Ch 9 Base to Car
42.700 Ch 9 Car to Base
42.820 Ch 11 Base to Car
42.580 Ch 11 Car to Base
42.840 Ch 13 Base to Car
42.900 DMV Enforcement
154.680 NCHP High Channel
154.920 NCHP High Channel

try these babies out and see what happens...(I have left out 3
listed high band channels that they may use there that they
don't there in the capital city)

note that you will hear base to car really good, but car to
base will be kind of bad...the high channels are usually car to
car or places where the 42mhz band is not working well...

All of these I have heard used at one time or another - I used
to drive a courier truck from raleigh to the outer banks every
day and back again.

good luck

: use. Southwest flies only Boeing 737 jets:

: You obviously can use the AT&T airphones located on the back of
: every third airline seat.

: Portable devices that may be operated at all times are:
: Hearing aids,
: Electronic watches,
: Pacemakers (how nice, you don't have to die of a heart ailment while
: you're on board!).

: Portable devices that may be operated operated inflight, but turned
: off and properly stowed for taxi, take off, and landing are:

: Portable computers with or without umbilical or mouse,
: Electronic calculators,
: Audio recorders or players,
: Hand-held electronic games,
: Television receivers,
: Pagers,
: Electronic cameras,
: AM/FM radio receivers.

: Devices that cannot be operated while inside the aircraft are:

: Portable telephones,
: Remote controlled toys,
: Radio transmitters (ham, CB, etc.),
: Any other devices not addressed in this section.
: Plus, cellular telephones MUST be turned off while on the aircraft.

: ----
: If find it interesting that Southwest lets you listen to AM/FM radios,
: or even to try and tune in a television while the aircraft is flying,
: contrary to problems I've seen posted about AM radios possibly
: interfering with avionics. Maybe the 737s they use, most which are
: relatively new, are more immune to this interference. Nothing is
: said about scanners or shortwave receivers operated on board, although
: since they aren't mentioned, you'll probably won't be allowed to
: operate them unless you get approval from the pilot.

never really had any problem listening to a scanner on b oard the
aircraft. I always listen with an ear piece. I like listening to ground

and clearence to find out how long we will be held at the gate before being allowed to taki...sometimes the controllers fudge this time a little. the aircraft's clearance and flight plan have a specific time by which they must be airborn, if for some reason, they are still on the ground, the flight plan and clearance becomes void and a new one must be filed.
the Tower, tracon, and center frequencies are also interesting. I usually get a window seat and normally sit near the rear of the aircraft.

Sometimes, I wear a sport coat andput the scanner in the inside chest pocket. I run the ear piece into my ear and can listen without anyone ever saying anything!!

I do remember visiting an amusement park with the scanner in my ear. the radio was in an inside jacket pocket. i road one of those roller coasters where you go upside down..no problem..the ear piece stayed in my ear the whole time!!

Hello Peter,
I was on a flight from Hawaii to Dallas and was listening to my Ht Ham radio.
Again I say listing. The young stewardess TOLD me to turn it off> After explaining that I was only listening she still was not impressed.
They tell you not to transmit during take off in the flight prep dialoque. It is also stated in one of the hand books in the pocket of the set containing various reading material.I think if she might have had some knowledge of an ht she could have had another opinion.

I would suggest to ask for the co-pilot or pilot for approval before take off and your experience my be differnet than mine
What I did get to hear was interesting before I turned it off. Some air,local police and other hams

Since few of you seem to really understand the point, on which you're so intent of amplifying, let me go back and do the job properly. RS sells four gender changers; they keep them on a display rack in the computer department. I walked into the store and asked the fellow, "Where are the gender changers?"

The reply that I got was, "What's a gender changer?" (he said with a shocked expression on his face).

Perhaps I should have been more explicit and asked, "Tell me my good fellow, I'd like to purchase a serial RS-232, DB25 male/DB25 male, gender changer. Where in this electronics emporium do you display them and would you be so kind as to lead me to them?" The analogy of asking for a motor in a parts store or food in a grocery store is grossly flawed. What I did was the equivalent of going into an auto parts store and asking where are the windshield wipers or into a grocery store and asking where are the apples?

Now all of you people who have responded to this post, as well as the anonymous cowards who wrote to me directly to tell me that I'm an idiot, a sniveling something or another, let me make this point as clear as I can make it. If a RS salesman does not know where in the store a gender changer is displayed, then he's not earning his keep. This is not some high-tech item that requires training, understanding of electronics or anything else beyond the ability to read labels. You can try to justify why RS hires the people it does; and why they don't do as good as job as they might; or why today's customers are too demanding; but as far as I'm concerned, you would be better off pissing into the wind.

RS needs to do a better job of providing basic service to its customers. After that, we'll talk about the more advanced sort of service that you get at McDonald's, Wal-Mart and the Jiffy Lubes of the world.

> I believe the poster's point was not about ignorance, but about
> insufficient data. Since you apparently didn't understand his
> "autoparts" example, let's go with your "grocery store" example.
>

From: andyc@opus.freenet.vancouver.bc.ca
Message-ID: <43ee5j$qci@milo.freenet.vancouver.bc.ca>
Source record: 249101

It is said the European model of the Pro-26 is continuous from 25Mhz to 1.3Ghz, unlike those that can be found here. Since they are the same model, perhaps a mod is possible? Unless, it is all inside the chip, then... no go.

Jim:

The entire cellular concept is built on the idea of frequency reuse. If a radio station in New York City is using 770 kHz, for instance, and the station is broadcasting at an incredibly high power so that people in NJ and CT will hear, no other radio station within hundreds of miles can use the same frequency because the two would interfere with each other.

Since cellular frequencies are so scarce, and there are so many users, someone years ago came up with the idea of CELLS where certain groups of frequencies are used at LOW power. By doing this, a cell 15 miles away could use the very same frequencies. Another cell 15 miles from that one could use the same frequencies...and so on. Why is this good? Because then many people can be having simultaneous conversations on the same frequencies at the same time and NOT interfere with each other.

In order to reuse frequencies like this, however, you must have LOW power. And low power converts to a small coverage area, or a small cell radius. A mobile traveling 60 MPH through a cell will need to continue service on another cell with different frequencies. Hence, the call is "handed off" onto another frequency.

The breaks you hear in the conversation are just that. And there's absolutely no way YOU could know which frequency the call will continue on. In order to know that you would need to know:

(a) where the mobile is
(b) in which direction the mobile is traveling
(c) which frequencies are assigned to the cell that the mobile is traveling into

The call will continue on one of those frequencies IF there are idle radios -- it could continue at a less desirable cell if there are no idle radios to serve the mobile.

It should be obvious that there are no rules which can help you find the conversation once it hands off. By the way, the new conversation you hear is a different mobile handing IN to that radio.

bill.funk@iotp.com (BILL FUNK) wrote:

> I got news for you, John: it is indeed illegal to listen to cellular phone
> calls in the U.S.

Yes it is. Just like it's illegal to remove tags from your mattress.
Unless you walk into a police station and confess there is ABSOLUTELY
NO WAY that they know you are listening -- NONE.

The Cellular industry knew they screwed up when they decided to send
clear analog over the airwaves. When they started losing customers
who became aware of the fact that they were using RADIOS, the industry
lobbied Congress to get a law passed. (I guess the campaign
contributions were pretty high!) Now that the law is passed, there's
no compunction to warn customers.

This is indeed a smoke screen because cellular customers don't know
how easy it is to be listened to! Cellular companies just tell their
customers -- "oh no! It's against the law...don't worry, nobody's
listening!" Same with cordless phones (which are still legal to
listen to in SOME states, but not all, and the number is decreasing).
When is the last time you saw a BIG warning on the box of a cordless
phone explaining that it was a RADIO that can be picked up by all the
neighbors?

This is indeed one of the stupidest laws ever to be passed. It says,
in essence, that if I have the audacity to DEMODULATE radio waves that
are TRESPASSING on my property, I can end up in jail. Can you believe
such nonsense? How about SOUND waves? Suppose my neighbors (on the
other side of my apartment wall, are having a heated argument? Should
I plug my ears? Or light waves/photons? Should I look away if my
neighbor lady decides to iron in the nude in her picture window?

> checked, glass is an INSULATOR, not a conductor of electricity. i can
> guarantee you that if you just left the coupler box on the inside of the
> car attached and removed the antenna element on the outside of the car,

The last time I checked, two conductors with a slice of insulator between
was called a capacitor. The impedance of which is dependant on the frequency
of the signal passing through it. (In this case an insulator to DC)

If you haven't grasped the difference between resistance and impedance, now
would most likely be a good time to shut up.

I don't know how/good bad the aerial in question is, but it is most definatly
better than just the coupler box.

I have also seen glass mount antennas for transmission use at 144MHz, so
they can't be that bad.

> ... to connect the earphone jack from the scanner into the mic in jack ...
> ... the droid at RS said that the VOX feature didn't work if you bypass
> the internal mic

I've used a number of VOX recorders with a direct connection without a problem. In fact, it would be difficult to design a recorder where the VOX didn't work from all microphone level inputs. I suspect the salesman was thinking of the problems in signal levels. If you pick up a matching attenuator (RS #274-300, $3.49) you should have no problem (use a shielded audio cable for the connection, to avoid picking up low level noise).
You might consider the Micro-51 desktop microcassette recorder that was recently on sale at $40. With a right-angle adapter (#274-372, $2.99) to tuck the attenuator out of the way, it makes a nice complement to my Pro-2005. The half-speed feature means I can slow morse IDs down to a speed I can copy.

Source record: 249107

This has been a recent topic of discussion. If you probably dig up the relevant stuff if you do a search on "PRO 2035." Lots of people have pointed out that is it being discontinued and others have pointed out that its replacement is the PRO 2042 (for $50 more). I don't think anyone has really said why. I don't know why. Jonathan Clough told me that it was being discontinued in Europe because of some impending regulations (not really to scanner listening but something to do with the design of the unit itself). That may have a bearing on it, but like I said, I dunno.

I've been seeing commercials on my cable system for closed
circuit radio stations called "music choice". And I was wondering if I
could hook my scanner up to my cable coax and receive these channels?
Does anyone know what frequencies these channels operate on, are they
just the regular fm 88 - 108 mhz??? or are they scrambled, and you have
to pay for them?? tnx.

>explaining that I was only listening she still was not impressed.

Here's what you do: get a stereo-to-mono adaptor for your Walkman-type headphones. Plug them into the scanner/HT and get out your favorite magazine to "read." When the flight attendant comes by, just cover it with the magazine. All they see is the headphones and assume that you're listening to cassettes on a Walkman. This avoids the issue and it's worked like a charm for me!

I'm pretty sure they're scrambled. A friend of mine has it and it requires a special convertor box, the output of which hooks up to the AUX input of your stereo. It is really impressive, though; CD quality audio, no commercials and over 30 choices of music to listen to. And if you like a particular tune, the remote control will cause a screen on the front of the convertor box to display artist and song title. Around here it only costs an extra $6 per month.

> ... program the second phone so that they both can be on the
> same phone number.

It's called cloning and is, if not criminally illegal, a violation of your contract with the cellular provider. There are shops that will do this for you, but they tend to work late at night and change addresses abruptly.

The reason that the cellular companies go after duplicate phones is that an active phone periodicly reports to the system, which notes the current cell. If two phones report the same ID in different cells, the computer doen't know what to do with it. While this is clearly an oversight in the system design (and some providers are making mods to allow duplicates), it is still the current status.

While you may swear both phones will never be powered at the same time, you still run the risk of losing your cellular service (and possibly both phones if the cloner gets raided while working on your units).

4186. PRO-26 Frequencie Mod question

Newsgroup: rec.radio.scanner
Date: 1995-09-16 00:00:00 UTC
From: foxcat@omni.voicenet.com
Message-ID: <foxcat-1609951231340001@philly20.voicenet.com>
Source record: 249113

I'm brand new to scanning.

I have a Radio Shack PRO-26 scanner. 25MHz - 1.3 GHz

I notice that several ranges of frequencies are locked-out. Below, the
"-locked-" sign indicates the locked-out range of frequencies between the
two frequencies shown, specifically:

28.9950 -locked- 29.0
53.9950 -locked- 59.7450
71.7500 -locked- 72.0
75.9950 -locked- 81.750
87.7500 -locked- 88.1
107.9000 -locked- 108.0
173.9950 -locked- 179.750
215.7500 -locked- 216.0
224.9950 -locked- 225.0
399.9875 -locked- 400.0
511.9875 -locked- 517.750
805.7500 -locked- 806.0
823.9375 -locked- 851.0
868.9375 -locked- 896.1125

Can anyone tell me if there are any modifications to fill in all these blanks?

Any help would be greatly appreciated.

Thanks!

It's digitally modulated, so you need a separate, stand-alone converter to decode it. But, just like regular cable boxes, the music decoder boxes (which are rack-mount size and fit in nicely with your stereo gear) are available from third-party sources; so you don't have to pay cable the monthly rental charge for the box.

: : Cordless phone users are considered to have "No reasonable right to
: : privacy guarenteed" since they 'know' they are transmitting signals
: : into the air... anything intercepted is fair game.

: The most recent changes to the ECPA make it illegal to listen to
: cordless phones, too. The 'reasonable right to privacy' is a common-law
: ruling that is superceded by actual legislation. Now the only legal ways
: you have to listen to cordless phone calls is to either get a
: court-ordered wiretap, be a party to the conversation, or have the
: permission of at least one party to the coversation.

It wasn't "common law" - it was a ruling by the US Supreme Court. Congress has felt the need (for big bucks - most likely) to negate that ruling. Until it is overturned by the courts again, it will stand as law in the US.

You cannot even listen to cordless phone calls on your scanner - even when you are a party to the conversation or have the permission of one party. The law is quite restrictive - and stupid.

: Wow. I'm sure that will stop a lot of people. :^)

Yep.

: single purpose, and thats criminal and civil action against someone who is using the
: phone for such, ie. you monitor a call about a drug deal on cell, you know who it
: is, you know what time and where thay are going to be at, you know whats going to
: happen and how, but, THIS INFORMATION is now subject the the Communications Privacy
: act of 1986, any and ALL information is void in a court of law, law enforcement can
: not accept it, and in most times will not if you tell them how you obtained the

Nope. That is NOT how it works. It is also illegal for you to break into a house and steal material to be given to the police as probable cause for a search warrant. As long as you did it on your own - without the request of the police - the material/information is acceptable in court.

The privacy act just makes it illegal to listen, and does not allow the POLICE to listen illegally and then use that information as evidence. It does not stop the private citizen from doing so.

: information, and if you DO inform them as a "good citizen" you could be reported to
: an FCC field office, and charges brought up against you for breaking that LAW. This

Yes, you could be charged. However, what police department would do so? I also doubt if the FCC would be the one bringing charges - it would most likely be the FBI or federal agents.

By definition a "good" charger won't discharge your batteries before
charging them. Doing so is very hard on your batteries, and really
shortens their life. Don't do it.

If you are worried about "memory", don't be. It's a non-problem.
You'll notice that *NONE* of the battery manufacturers recommend
discharging or deep-cycling their batteries.

I recharge all my NiCads immediately after any use, regardless of how
short. They last MUCH longer than when I used to deep-cycle them.

The Pro-2042 like the Pro-2035 is not sold by RS in Canada...

From the 1996 RS Catalogue the Canadian Market has;

HAND HELD $ CDN
Pro-24 16 ch. $229.99
Pro-25 100 ch. $299.99
Pro-26 200 ch. $529.99 MIL A/C
Pro-27 20 ch. $189.99
Pro-29 60 ch. $269.99
Pro-50 20 ch. $249.99
Pro-51 200 ch. $399.99
Pro-60 200 ch. $469.99 MIL A/C
Pro-63 100 ch. $349.99

BASE $ CDN
Pro-508 20 ch. $249.99
Pro-2026 100 ch. $279.99
Pro-2033 10 ch. $189.99
Pro-2036 200 ch. $569.99
Pro-2037 200 ch. $399.99
Pro-2040 100 ch. $299.99

That's what they sell up here!!!

The case against the drug dealer would be thrown out of court on the basis of illegally-obtained evidence and you, the informant, would be prosecuted for violating the federal ECPA laws by illegally monitoring their conversation. Also, since the drug dealer has the necessary financial resources to hire a sharp lawyer, he would probably file a civil suit against you for invading his privacy by illegally monitoring his cordless phone calls and be awarded a substantial judgement for damages.

Kinda makes you proud to be an American, doesn't it?

Yep, and they do misbehave. E.G. married men/women calling (900) sex chat lines, ordering prostitutes, illegal gambling, etc. Anyway, it's also "illegal" to listen in too. But I do agree, there are much more interesting things to tune into, than your neighbors. There is just so much out there to scan these days, although I worry that the spread of digital technology will gradually eat away at the stuff out there to listen to.

That is not quite correct. Law made by the courts is
called "case law". Common law arises from the mores of
society and is often the basis for written law
(legislation). The courts often attempt to interpret the
intent of legislation based on existing common law.

Sounds like a service we have in this area called Digital Music Express (DMX). The catch is - it's a digital signal. It requires a converter that essentially acts like a modem and digital-analog converter. Just looks like a cable box. Your scanner won't hear it.

The service is actually very good. Since it is a digital transmission it sounds as good as a CD. And they send data along with the music. My brother had it for a while. The remote for the converter box was two way - and would display the name of the currently playing song, the artist, the album (with catalog number) and Billboard ranking.

And yes, it is a pay service. I think it was $9.95/month.

I too have an R/S counter. Obviously it's not going to be as good as a three hundred dollar counter, which it isn't. The only shortcoming I can find is that it is very easy to accidentally bump the power switch, turning the unit on, and it EATS batteries. If you do get one, buy nicads and a charger.

Not necessarily. "Evidence" can only be obtained
"illegally" by the police. If THEY monitor without a
warrant and then attempt to use what THEY hear in court, it
would be thrown out. Evidence obtained through the
"illegal" actions of citizens is admissible. If it were
not so, what would be the point of getting a co-defendent
to testify against his buddies?

s to hire a sharp lawyer, he would probably file a
>civil suit against you for invading his privacy by illegally monitoring
>his cordless phone calls and be awarded a substantial judgement for
>damages.

Maybe, but then he would have to admit to the existence of
the alleged conversations and that may make the evidence of
those conversations admissible in a criminal trial. They
could be ruled as "other comments by the defendent" that
could be brought up during cross-examination by the
prosecution (if Mr Drug Dealer takes the stand).

4218. Re: Radio Shack on-glass mobile scanner antenna?

Regarding the glass radioshack antenna...

It's a tough decision. I bought the magnet base antenna which stated it will sustain speeds in excess of 55mph. That's BULLSHIT. It fell off at 60. Beware, it might fall off at 56mph. :(

The glass antenna depending on where you put it is also important. Don't put it on the roll down windows or else you won't be able to fully open your window. As well, it's a tape stick attachment. If the "stick-um" fails, there goes your antenna.

Just my 2 cents.

Take it easy!

4219. PRO-2030 Mod Listed Here

Newsgroup: rec.radio.scanner
Date: 1995-09-17 00:00:00 UTC
From: hbgeg066@huey.csun.edu
Message-ID: <43hp7r$r26@dewey.csun.edu>
Source record: 249004
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

I've seen several posts asking for the Mod to the Radio Shack Pro-2030. I've listed it below, but it only works on older units manufactured before May of last year. The newer units lack the diode to cut to unlock the full 800 mhz band. In any event, I do own one of the older Pro-2030 scanners (also a 2006). It uses more inexpensive double conversion circuitry, but still is a nifty little desktop scanner. It is extremely lightweight. If you are unable to do the mod, I've found on mine many cellular images you can scan approx 21 mhz above the actual frequency, in the 896 - 916 mhz range. You'll miss many frequencies because you can't adjust to 30 khz spacing in that area on this scanner, but at least you should get quite a few frequencies to listen up there.

**
BC> Any mods known for the Radio Shack Pro-2030? Keyboard preferred, but
BC> hardware mod OK too, if that is all there is. Please post or e-mail.
BC> Thanks.

Product: Realistic PRO-2030 by Radio Shack
Purpose: Restore full 800 Mhz coverage

** Disclaimer...Modification of receiver will void the warranty of your unit. All modifications are done at your own risk.

** Monitoring of certain portions of the 800 Mhz band is prohibited by United States law.

** READ THIS!! IMPORTANT!! DO NOT PROCEED UNTIL YOU HAVE READ THIS!!**

New versions of the '2030 have been coming on the market that do not have L201. This is to comply with Federal US law. The jury is still out on whether the mod can still be performed even though L201 is no longer installed.

Modification of PRO-2030 for full 800 Mhz coverage with 30 khz stepping available. (Valid for models manufactured before May, 1994.)

1. Take out the screws at the bottom to open the 2030.
2. Look down into the top of the unit, behind the front panel, and locate a metal loop labeled L201.
3. Clip that part and move the two pieces slightly away from each other.
4. Re-assemble unit.

If your unit ever needs service, you can bend the two pieces back together and no one would know that the part had ever been snipped, due to it's rigidity.

>gender changers?"

Michael:

I don't want to spam all over you, but RadioShack sells more than four gender changers. And yes, you are right the employee's response should have been more in the line of "What type of gender changer do you need?" You might have been looking for a PL-259, BNC, TNC, F, N, Motorola and so on.

It is clear that perhaps the employee didn't know what a gender changer is. And his/her job is decode what you really meant to say. But really Michael, life is to short to get worked up over little stuff like this. Next time just shrug it off and ask where the computer supplies are. Maybe even try to share some of your vast computer knowledge with the less endowed people that wait on you.

My question for you is why did you need the gender changer to begin with? Why not get the right cable or change the end??

Hmm .. well, most airport towers are going to be running relatively
low power. Unless you are within 30 or 40 feet of the transmitting
antenna, your Scout probably won't pick it up. And, the antennas at
the airport tend to be mounted rather high. If you positions yourself
very close to it, you are probably going to be in it's RF shadow.

Whew. That's an old topic. Seems to me that teh first character is the
day of production, the second is Month and the third and fourth are the
year. Mine is OCHH which is 15th day, third month, 1988. Sounds about
right since I bought it in June of '88.

I guess yours would be 15th of the 5th of 1992.

Hello,

Excuse me if there's any FAQ info on this, I didn't see any.

I'm looking at a Beartracker mobile scanner for use on long trips. This is the one with the ability to indicate the presence of a transmitting police vehicle within 3 miles, and is programmable by state.

Have you used one? I'd like to hear about the pluses and minuses of this feature and or the regular scanning capabilities.

Thanks!

>Bill Funk
> Internet: bill.funk@iotp.com

Bill,

The compentancy of staff from other businesses is irrelevant.
Likewise, the level of expertise that SHOULD be expected from someone
on the Radio Shack staff is irrelevant.

Bottom line: if enough customers are not as understanding as you,
Radio Shack could go out of business. Whether they should or not is
not applicable since RS is subject to the laws of supply and demand in
the (seemingly) free market.

So far RS has not gone out of business (at least not all over), so
it's not a problem -- yet.

Please excuse the slight off topic post.

I am looking for information about an early aircraft radar used by the US Navy during World War II. Known as ASB or Air to Surface type B radar these units were carried by TBF Avengers and SBD Dauntless dive bombers. Externally the units had two small Yagi antennas one under each wing. There may have been a US Army SCR designation but it is unkown to me.

What I need are contemporary descriptions or mauals for this equipment. Any leads to other sources are welcomed. I will be glad to pay for photocoping and postage.

Please respond to schapiro@notis.com

You did not mention which airline you were on and for that matter, I don't know if it varies from one airline to another, but I have flown on American and United in the last few weeks and it is a different story.

On these two airlines, the requirement (both stated and written) is for all electronic devices (with the exception of hearing aids, pacemakers, etc.) to be turned off before they begin to taxi. They must remain off until airborne for 10 minutes. At that time, they may be used. The exceptions are radios and specifically cell phones. By the term radio, I interpreted their meaning to be any radio receiver and/or transmitter.

While I personally feel some of this is overkill (i.e., cassette players), it is still the way the regulation is stated.

This brings an interesting, new twist to the Good Samaritan philosophical quandary. Suppose an eavesdropper overhears someone contemplating a murder? Is the eavesdropper obliged to alert the authorities, because that would mean self-incrimination and a violation of that person's 5th amendment rights? The eavesdropper, knowing the he is breaking a law, will be hesitant to do anything about it.

Of course, this type of thing already exists where, for instance, it is illegal to carry a concealed gun. A person doing so, and witnessing a violent crime, will be hesitant to use the gun, lest he himself end up in jail.

Are there any precedents for handling this sort of thing?

I don't think it's possible. The unit was a replacement for the
PRO-2006 (which was modifiable), and the 2035 had to comply with
U.S. Govt ECPA regulations regarding 800 mhz cellular reception.
Whether some different, modifiable unit, was sold in Brazil, I
don't know.

Message-ID: <43imms$edk@newsbf02.news.aol.com>
Source record: 249029

WOW!

You have been given the biggest line of B.S. this week!

First, unless the 800MHz system they are going to use is going to be digital (i.e. the audio is modulated digitally as opposed to analog -- the way most radio systems currently operate), you can receive the transmissions on any scanner which is capable of receiving the 800MHz band.

Second, presuming they are using a trunking system, there will be anywhere between 5 and 30 frequencies grouped together as part of the "system." Because trunking means the sharing of a select number of frequencies by many users, they may not be on the same frequency all the time. So, you'll have to scan as many channels as the "system" has.

Third, aside from -audio- output, scanners have no RF (Radio Frequency) output. This 4 watt versus 8 watt stuff is drivel spilling from the mouth of someone who has heard the terms used, but has no idea what they mean. So, they start using the words themselves to make themselves sound like they know what they're talking about when they really don't! RF output refers to the power output of the acual radios in the system. For example, a portable radio might put out 3 watts, a mobile unit might put out 15 watts, and the base/repeater might put out 50 watts. Basically, the more power out, the farther the transmission will travel.

Salespeople are infamous for telling their prospective buyers that their trunking system is private, and can not be listened to. Well, they are technically private in that an average Joe six-pack can't buy a radio at Radio Shack and transmit on the system. But, since they are using frequencies that are part of the public spectrum, anyone who is so inclined can buy a scanner to listen.

So, tell your neighbor that he's full of, uh... baloney(!), and go to your local ham/scanner/electronics store, and buy a copy of Scanner Master, Police Call, or other scanner guide that should include a much more detailed explanation of 800MHz trunking than I've offered here.

Good luck!

PA>The last time I checked, two conductors with a slice of insulator between
PA>was called a capacitor. The impedance of which is dependant on the frequency
PA>of the signal passing through it. (In this case an insulator to DC)

PA>If you haven't grasped the difference between resistance and impedance, now
PA>would most likely be a good time to shut up.

it takes a big man to tell someone to shut up paul. why don't you,
since you're such the f***ing expert, explain what is so wonderful about
glass mount antennas.

i've tested many a glassmount antenna. i have come to the same
conclusion, over and over again, that glassmount antennas are trash at
lower frequencies. i've had many a cb'er that tried one of those cb
glassmount antennas come whining and crying that they had better
transmission and reception characteristics with their old magnet mount
antennas than with the glassmount antenna they just blew a load of money
on. there is a degree of capacitance there, but at less than a few
microvolts it's almost non-existant, and the reception is less than
wonderful even in the 400MHz bands. the uhf trials i performed were
done using a variety of glassmount antennas, and even the top of the
line 1/2 wave larsen glassmounts (and i find larsen antennas to be
typicaly one of the best), just couldn't cut it compared to even a
magnetcially mounted antenna. several repeaters that i normally
received (yes, repeaters, not just simplex transmissions), were at only
half the normal s-unit readings i took having the same transceivers
attached to magnet-mount and permanent mount antennas.

don't try to tell me i have no idea what i'm talking about. i'm not
denying that there have been a few recent advances in the glassmount
antenna area, but as for me, i'd never settle for less than perfect
performance. i don't approve of db loss in my equipment or
applications.

>for details. Happy scanning and good days. Keith

I've also had the 8000, and it was nothing but a pain in the butt for
me.Too much interference. It would stop scanning on about 20 different
freq's (of local Fire Departments) and just stop, and it would sound
like a dead key. Well, I put my old BC200 right next to it, and guess
what??? Yep. Nothing. BC200 goes right over it, and keeps scanning.
And the BC200 is single conversion, and the AOR is triple?? Whatever.
Also, did you ever think about buying the computer interface?? Don't.
If you read in the manual, "Do not operate the aor with the antenna
near a computer. The interference will be very bad." (not a direct
quote, but to the point. AH, so we hook up an external antenna.. BUT..
"Do not use an external antenna with the AOR. It's not meant to handle
it." Hmmmm.. PLUS, I've put the AOR next to the BC200, and locked them
both on the same freq, 153.770, Palo Alto Fire Dep't. The BC200 came
aliive with a call, the AOR didn't break squelch. SO, I turned the
SQUELCH nob all the way (so as to hear the rushing noise), and held
down the monitor button. NOTHING. And, yes, the batteries were fine,
the volume was up, etc. Didn't even break squelch. Took three minutes
before it did. You may be missing calls, etc. How bad did I hate the
AOR?? Well, I sold my BC200 to a friend for $180 since I was $180
short to buy the AOR (long time ago..). Sold the BC200, went and got
the AOR. Well, the other day, I GAVE the AOR to my friend in a
STRAIGHT swap for the BC200 back. And I couldn't be happier. I have
the Metro West long life battery pack,. cellular mod, battery mod, and
I don't miss the AOR at all.

Even though the AR2700 is sold with the AOR label, one might assume
it's made by a different company. The case is almost the same as
the Yupiteru MVT7100 and the circuit boards don't bear the AOR logo.

You may want to read my upcoming AR2700 review when it is published
in October 1995 Monitoring Times. The AR2700 I tested had *lots* of
computer-type birdies and an insensitive carrier activated squelch.
It skipped over signals unless they were fairly strong so it was
frustrating to use. Too, the AR2700 is difficult to program.

The AR8000 I tested worked a lot better than the AR2700 and the AOR name
appears both inside and on all the printed circuit boards.
It uses a more sensitive, noise activated squelch (like most
scanners). The 8000 is a top drawer model with good performance,
but it scans slowly, draws a lot of current, and has a high cost.

Me? I still enjoy the Uniden/Bearcat BC3000XLT portable.
The Radio Shack PRO-60 is a good choice if you want to spend less
money, although it is prone to receiving images in the 160 - 162 MHz
range.

The BC3000XLT and PRO-60 lack computer interfaces.

For more info, see my reviews of these models in past and future
issues of Monitoring Times.

I think the biggest problem with Radio Shack is that they are where
people go when they aren't sure what they want. Someone technically
illiterate (like my mother) that knows nothing about computers or scanners
or SWL walks into RS. The salesman can sling any line of BS and
get away with it. I know, they've tried it with me. Betcha didn't know
that Fire Chiefs can give permission for people to talk on "their"
frequency? An RS salesman told me this. I've watched them tell people
within the past year that a 486-SX25 won't be obsolete for years.....
There is a certain amount of trust implicit in their job as
salesman. It's not just "sell anything". It's sell the right thing.
The person that bought that 486SX25 or that bought the scanner that can't
pick up 800 leaving them in the cold when the local PD changes freqs
may not learn what a disservice was done them for months. Then it
is too late.

I also noticed the PRO2035 missing from the new '96 catalog, yet the 2042 (presumeably the replacement) looks identical, and I could see no difference in specs.

If anyone has anymore information on this newer unit, please let us know.

thanks,

It hasn't happened to my 2006, but I know what you're talking. It's
happened to many radio volume controls I've had. I would, though, be
careful about using any tuner cleaner inside your scanner. You
probably could spill that stuff in a TV, and not harm much. But
the circuitry in your 2006 is much more delicate and tightly
placed.
But with an old stereo I have with that problem, I often turn the
volume knob all the way back and forth several times (with the
power off). This seems to temporarily help this condition.

BC> ignorance.
If you do that right away, they'll think you're an RS supervisor.
BC> You are expected to learn and grow to make yourself more of an asset.
In every other business in the world except Radio Shack.
I would like to meet the Rocket Scientist who wrote that RS slogan/joke,
"You've Got Questions, We Got Answers" It should win Science Fiction
awards everywhere. If you walk into any Radio Shack & actually find
someone who actually knows something about what you're asking about
WITHOUT looking it up in a damn catalog, consider yourself VERY lucky
indeed. It seems that if it's not in their bool, they're lost. If you
can possibly help it, don't show them they're wrong if you should know
something about what you want to talk about. I did that once with
something to do with a scanner, & they kept repeating, "That's not
what our book says" I also showed them where their Police Call Book
had made several mistakes & I was still told I was wrong.
What can you say?

> Funny, you must have had a few centimeters of dirt on the top. I have driven
> at over 80 mph, and never had the antenna slide at all.

Just a humorous aside to the notes on magnetic-base antennas:

I was moving cross-country and rented a 24' U-Haul truck.
Since I wanted the best possible coverage from my 2 meter
ham rig, I decided to put my magnetic-mount antenna on top
of the body of the truck. Unfortunately, there was a slight
problem with this -- the body is aluminum.

To solve this, I took a steel oil drip pan (about 2' x 4') from
my garage and duct-taped it to the roof. The antenna held well
to this and gave me great coverage for the long drive.

When I arrived in Los Angeles, I removed the antenna, but
forgot to remove the drip pan. So, somewhere there is a
24' U-Haul truck with a 2' x 4' drip pan duct-taped to the
roof of the body. I sometimes wonder if anyone ever
discovered it and puzzled over its purpose.

Electromagnetic shielding with a sport coat! (Patent pending ...)

I don't wish to be in a same aircraft with one of these 'no-problem' guys.
Safety orders are not just for fun, and the main question has nothing
to do with anyone's sayings.
Are you really sure that your equipment doesn't emit spurious signals
which may interfere with the control system of the aircraft where you
are sitting in? Who has measured the interference levels?

The MTX810 is a trunking 800Mhz radio, it will do Type 1 Trunking and conventional, regular non-trunking 800Mhz repeaters and talkarounds. The ABC switch and the 1,2 switch are programmable. You can have 2 talkgroups, in 3 systems, or 3 talkgroups in 2 systems. A conventional repeater or talkgroup takes up the space of 1 system.

The answer to the second question is correct, except for the price : <

>-Drew in Charlotte-

I know this might sound a bit anal retentive, but there really is a good reason why they don't let you use radio receivers on commercial flights. A superhet receiver has a local oscillator that can and does radiate a signal, say 10.7 MHz above or below the frequency you're listening to. If you're listening to something in the 2 meter ham band, this could very well put the L.O. signal right on an airline frequency. Make no mistake, it could block out the receiver in the cockpit. If they catch you, it's a federal offense.

If you have a North American PRO-2035 (Cat no 20-460 ?) as far as
I am aware you cannot modify the unit. The "non" North American Units
(20-9460) are full coverage but the two units use different CPU's.
Unless you change the CPU there is no way to restore cellular (AFAIK).

I assume the upcoming PRO-2042 will be the same.

:
:>'Common law' is, by definition, law passed down from the courts. Common
:>law stands until overturned by the courts or by legislation. The most
:>recent changes to the ECPA were enacted due to laws passed by Congress,
:>and overturn the 'reasonable right to privacy' ruling.

: That is not quite correct. Law made by the courts is
: called "case law". Common law arises from the mores of
: society and is often the basis for written law
: (legislation). The courts often attempt to interpret the
: intent of legislation based on existing common law.

Case law is the American equivalent of English common law -- which is
law made by judges. No matter which word you use, the basic info is
sound...that is up to now, the courts have ruled in the absence of an
express law that cordless phone users had no reasonable expectation of
privacy. However, this ruling should no longer stand since the
legislation changing the ECPA expressly made listening to cordless
phones expressly illegal.

Note, however, that the revised ECPA has not yet been tested in the
courts (to my knowledge). It will be interesting to see how the courts
rule.

From: dgs@53iss6.Waterloo.ATTGIS.COM
Message-ID: <DF3uLy.CA3@attwat.Waterloo.ATTGIS.COM>
Source record: 249050

Our local PD is in the process of converting from an ancient 142MHz system to a trunked system in the 868MHz range (have already found 5 of the frequencies). However, I need to now add the mod to my 2006 to restart the scan as soon as the transmitting station releases the key and avoid those tones that automatically follow (pause-beep-pause-beep-shortpause-beep-shortpause-beep). If this information is to be found in one of the Bill Cheek books, or needs to be ordered from him, I would appreciate that info - I did not find it in any of the 2006 mod sheets from the net sites.

Thanks in advance,

can't
>pick up 800 leaving them in the cold when the local PD changes freqs
>may not learn what a disservice was done them for months. Then it
>is too late.

As a former employee of Radio Shack (hey, I was between broadcasting jobs and had to pay the bills, what can I say?), I can tell you this: the employees are not only allowed, but ENCOURAGED to sell obsolete merchandise to the customers! The Radio Shack commission-based compensation package includes a provision for earning "SPIFFS" which are additional dollars that they can earn for getting rid of the old junk that has been discontinued and is still taking up space in the store. The "SPIFFS" are substantially more than the normal commission that would be paid for selling current merchandise.

That's why the sales drone always trys to steer you in the direction of that 486SX25 or non-800Mhz scanner!

Actually, what you mentioned DID happen in Tenn. this past Christmas
season. I'm sure it was posted here for some weeks, but it involved
a woman who received a scanner as a gift, and while listening to it,
heard her neighbor plotting to kill her(the neighbor's) husband.
Anyhow, she called the police and the plotter was arrested. I'm sure
there was a little more to it then that, but that's the gist of it.

And there never was any mention of prosecution for the listener.

>
> Thanks.

Depends. Local lay of the land, type of phone being used, etc.
For the most part, any cheap phone can be picked up within 100'
or so. Some more expensive phones can be heard clearly beyond
even the much hyped 500'. I have heard cordless phones through
obstacles such as other apt. buildings, and the base unit is over
300' away. It would be nice from a consumer standpoint to know
just what make & model this phone might be, but there is no polite
way to ask. (:

With a decent antenna you should expect to hear phones from at least
300' away.

With little more than a PAPER CLIP you should be able to hear phones 300 feet away! With a "decent" antenna...a vertical dipole or ground plane, cut to length for 46Mhz, mounted high and in the clear, and fed with good grade coax, you should be able to hear cordless phones up to at least a mile away and sometimes even further.

Paul Opitz (rpo3352@omega) wrote:

: : It wasn't "common law" - it was a ruling by the US Supreme Court. Congress
: : has felt the need (for big bucks - most likely) to negate that ruling. Until
: : it is overturned by the courts again, it will stand as law in the US.

: 'Common law' is, by definition, law passed down from the courts. Common
: law stands until overturned by the courts or by legislation. The most
: recent changes to the ECPA were enacted due to laws passed by Congress,
: and overturn the 'reasonable right to privacy' ruling.

Close. Common law is the body of law developed in England, based on custom
and unwritten precedent. It is the basis of the English legal system and, by
extension, most of the US.

: : You cannot even listen to cordless phone calls on your scanner - even when
: : you are a party to the conversation or have the permission of one party. The
: : law is quite restrictive - and stupid.

: Read the ECPA. It clearly states that you can listen to any transmission
: you want if you are a party to the conversation or have permission from
: at least one party to the conversation. The ECPA never says 'you can't
: listen to xxx on your scanner', it merely says that 'you can't listen
: to xxx'.

I will have to reread the document.

: >What if you heard a drug deal on the cordless or a drug deal on the
: >cellular frequencies and notified the police!!

: The case against the drug dealer would be thrown out of court on the
: basis of illegally-obtained evidence and you, the informant, would be
: prosecuted for violating the federal ECPA laws by illegally monitoring
: their conversation. Also, since the drug dealer has the necessary
: financial resources to hire a sharp lawyer, he would probably file a
: civil suit against you for invading his privacy by illegally monitoring
: his cordless phone calls and be awarded a substantial judgement for
: damages.

Nope. The courts have ruled that the evidence is useable - unless you
listen at the request of the police (in which case the evidence would
be 'tainted').

As invasion of privacy is a legal matter - not civil, I doubt if the
dealer could sue.

It is unlikely that you would be prosecuted for listening either. The
local police certainy would not favor it - nor would the federal enforcement
agencies.

: Kinda makes you proud to be an American, doesn't it?

Seeing as I think the current drug laws are as stupid and unconstitutional
as the scanner laws - it just continues my belief that our country is very
seriously screwed up.

Not really, considering the cell images appear in the 370-390Mhz area (approx) and mil air extends from 225--400 Mhz. A few freqs may be lost in the cellular image area but very insignificant. I have had no problem hear in Maryland.

You're in luck!

The PRO-2006 is the BEST radio for PC control.

You need the OS456 board from Optoelectronics, call them at 1-305-771-2050.
The OS456 goes 50 channels per second, and does PL/DPL/DTMF too!

For software, the #1 products are Scan*Star for WIndows & Windows95 (new) and
Scan*Star Commercial. Call us at 1-408-926-5630.

4287. Computer & Scanner FAQ?

Newsgroup: rec.radio.scanner
Date: 1995-09-18 00:00:00 UTC
From: michael@alexander.terranet.com
Message-ID: <michael-1809951817360001@alexander.terranet.com>
Source record: 249069

One of the most frequent questions that come up is, "How do I interface my Gonzo PCX10000 scanner with my Deluxorame PC and is the Scanbrainblaster program more suitable than the Scanscatological program?" There a FAQ to answer these sorts of questions? I haven't seen Bob Parnasses' (sorry, I know I misspelled his name) FAQs lately and I don't recall what they cover.

If not, I'd be willing to devote some time to it, if I can get a couple of helping hands. I don't have first hand experience with Commtronics' HB232, for example, and while I use Opto's CX12AR interface and I don't know anything about the EDCO and UK units. I'm familiar with WAVe for the Mac and Scancat for PC; anyone know Scanstar for Windows and the others? I'd like to make this really comprehensive (otherwise, why do it?).

Anyone interested? Reply to me via email and let's perform a badly needed public service.

Bill,

An old saying is to walk a mile in the other person's shoes before you condemn them. I think it would be incredible enlightening for you and many others in this group to try a few weeks behind the counter at Radio Shack.

First, I agree that many RS salespeople are inexperienced. The job doesn't pay enough to cause career moves by rocket scientists. But, if they are lucky, they will last long enough to learn. RS does offer product training and OJT provides quite a few eye openers. Occasionally, a customer will be decent enough to share product knowledge with another human being who needs help. Also, some salespeople at RS, as anywhere else, are not pricipled and will say and do anything to get your money. If you are surprised by this, you need to get out more often. If you find this to be true, let the district manager know. Most of the ones I have known were somewhat around-the-bend, but were very much concerned with customer complaints. If this does not work, find another store or another company. It's your choice.

In spite of your apparent confidence in yourselves, I doubt very much if you are an expert in every product area represented. I have heard gender-bender, gender-changer, double-male, double-female, etc. named in connection to everything from computers to CB to stereo. When a customer comes into the store, their resume, ciriculum vitae, and IQ are not printed on their foreheads. Part of the job is to determine the customer's knowledge level when trying to respond. Often this is difficult when the customer is taciturn and unresponsive. Many times this is because the customer is much more informed that the salesperson about the area of his interest. More often, it is because the customer is clueless about what he wants and is angry about it. In either case, the salesperson has to overcome this to help.

My work requires me to be on call in the evenings for equipment service at a local hospital. My mornings are quiet and from time to time I hire on a at local RS to kill some time. It is frequently frustrating to try to answer someone's question when they lack the background to adequately understand what you are trying to explain. This is not a joke, I once spent over an hour with

an angry customer. He had purchased a TV splitter from me the day before. He proceeded to cut the cable from his satelite dish to receiver and install the splitter. He then connected the other output to his VCR. As expected, neither the receiver or the VCR then worked. His complaint was that the splitter had damaged his satelite system. I tried a straight forward explanation. I tried apples and oranges. I drew pictures. Nothing worked. He left angry and convinced that I didn't know what I was talking about. I am sure if he was on internet, he would sound like many others spounting the ignorance of RS employees.

On the other hand, some of the customers are informed and want to prove it. I don't know everything about electronics. Unfortunately, in this age of system level repair, I have forgotten a lot of the fun stuff I used to know. However, in some areas, I will defer to few people. Occasionally a customer will come in with a chip on his/her shoulder and makes it clear that it is beyond my ability to advise them on anything. Often, they will have difficulty finding what they want and I will try to help. By inquiring what they are doing I get an explanation (targeted for a pre-schooler) and can help. Sometimes I can't help myself and will offer suggestions for a better way thus showing the customer that he is dealing with at least his equal. Its kind of fun to say," Let me try to put it so that you can understand."

BOTTOM LINE: If you think you have all the "answers", you try it for awhile.

If you interested in autoprogramming you need Commtronics HB232 ($200 in kit form, I think, but not certain). If you want computer controlled scanning you need an Optoelectronics 456 ($299). I don't have contact info handy, perhaps someone else can fill in the rest.

No, not like removing the tag.
Removing the tag from your mattress is not illegal at all. Listening to
cordless phones on your scanner is.
I never said you would get caught. I said it is illegal.
...

While your ideas may carry weight, they don't change the *FACT* that it's
illegal to listen to cordless phones with a scanner in the US.
While I happen to agree that it's a bad law, it's still the law.

This can still be done. Use a cell phone or a pay phone to call in the tip;
just don't tell the police where you got the info. Anonymous tips are valid
reasons, in court, to start a surveilance. "There will be a drug sale on "X"
corner at "Y" time." Hang up. That's all it takes.

Do you think it will be that soon?
I think it will take a little longer than that. Heck, it'll take longer than that just to depreciate present hardware for taxes. I think it will be between 9 and 12 years before we see wholesale changes to digital technology. Just my opinion, of course.

I have the RS DX-390, which is the same as the 392, but without the tape
recorder built in. It's a real nice portable SWR.
Have you noticed the lack of HF during the days? The pits.
Anyway, it's real early to tell if the 394 will be a good SWR or not, until
it gets into the hands of some people. Remember, the R-8 is a great radio by
specs (and in operation!), but the ergonomics leave a lot to be desired.
This wasn't understood until it got out in the hands of users, for the most
part.
When it hits the shelves, you can try it for free for 30 days. Let us know
what you think?

This is not a problem with the Scout, as such. You are trying to use it as a scanner, but it's much more like a frequency counter. As such, it needs to be in what's called the 'near field' of a transmitter. How far that is depends on the transmitting power, and the transmitter's antenna. It's not anywhere as far as most people think, BTW. You have to be CLOSE to radios that output small signals. Those walkie-talkies are relatively puny in output... You'd probably have to be within 8-10 feet to lock on with the Scout.
Hope this helps, though I doubt it's what you wanted to hear.

To the best of my knowledge, the 2035's sold in the US and Canada are not
able to be modified for this. The models sold in Europe (and, I would guess,
Australia) are unblocked in this area, so I hear.
Sorry.

The name comes from both a song and a movie about CB radio, back when they were the craze (a 'long' time ago... the 60's). The song was by C.W. McCall, and the movie starred Chris Kristopherson(sp?). ("Back off with that PigPen... Them hogs is gettin' INtense...")(I get 5 points for that!)

David Branson <DDBranson@msn.com> wrote:

>The other day, I saw a Radio Shack ad which listed the PRO 2035 at a
>clearance price.

I don't know. Companies keep that information "close to the vest."
Many of these decisions are economic, e.g, hoping an improved
model will sell better or be cheaper to manufacture.

>Does anybody know why they're discontinuing this model?
>I purchased one several months ago, and have been very happy with it,
>but I would like to know if there is some problem with it.

I returned my own PRO-2035 to Radio Shack because:

1) it had a band-independent selectivity problem.

2) the 100 channel banks were too cumbersome,
especially since the scanner wastes time
scanning channels programmed with 0.0 MHz.

3) the Auto Store mode was dumb and kept storing the
same frequencies over and over again.

Your mileage may vary.

For a complete PRO-2035 review and a comparison with the earlier
PRO-2006, see my article in January 1995 Monitoring Times.

Wht don't you contact K&L Technology @ 214-414-7198. He has a product which consists of software and a cable that plugs into your serial port on your computer. You can scan by freq. or search by capcode (dial the # of the pager and enter a # like 8888, when you see it come up on the screen, you've got the pager's capcode) now you can enter the capcode on the list "of codes to scan for" and you're in business. If you own a scanner and a computer this will do it for about $140.00. The only fault is that it doesn't work under windows.

Is it possible to connect my RS2006 to my Mac? And what might that allow me to do?

Any pointers to hardware and software sources would be appreciated. Please Email and I'll post a summary.

I've used my scanner on Southwest flights on numerous occasions. Since a scanner *is* an AM/FM receiver I accept it as a permitted device. After all, Southwest was the one who published the guidelines. They're the ones who said I could use an FM receiver. Nowhere do they indicate a list of "approved" frequencies that your AM/FM should be tuned to be an acceptible device. I also extend this logic to my operation of my GPS since it is an FM receiver tuned to 450 mhz.

So far the aircraft I've been on haven't been adversly affected. At least the crew hasn't communicated any problems to ATC or to their company via radio... :)

>investment?
>-

I toyed with a similar item, but was not too enthused with it. The one
I used is a Radio Shaft Silent Play (designed for use with video games
or TV's). I found a much better solution. I recently bought a baby
monitor (Fisher-Price), added a jack to the base unit and connected it
to the audio out jack of my scanner. Now I can carry the portable receiver
around (or use the AC adapter) and listen to the scanner anywhere. It
works better than carrying my handheld since I get better reception
through the base antenna - particularly when I want to listen in the
basement. The total cost for this project was $5. Now I'm watching
garage sales for more receivers - I'll keep them stashed around the
house. I leave the transmitter off when I am not using it...

4321. Radio Shack on-glass mobile scanner antenna?

you're still taking this to extremes paul. you're obviously still convinced that your answers and opinions are the only ones that matter. go spend some time and put a little money where your mouth is. you'll see that the glassmount antennas aren't all they're cracked up to be. maybe in an urban enviornment where all one monitors are nearby repeaters (i know, i used one around san jose for almost a ATS0=1 an entire year before i realized i was missing all the point to point and simplex communications) and powerful base stations having a glassmount antenna doesn't matter. the fact is, signals lacking the field strength of high power repeaters and nearby units are going to be missed, period. i provided test results to back up my conclusions, whereas it seems you're content to simply rattle off theory that you haven't yet attempted to apply to the real world.

you sound like the type of engineer that would design a circuit with components that don't exist, then argue with the tech who had to make due with what was available to duplicate the conditions your circuit called for.... complaining that the circuit looks nothing like what your schematic describes. are you an engineer paul?

>Rich
>>>>>

I have extensive experience with the CADEX product line. They are
good products. One of the first things they tell you in the manual is
that deep-cycling your batteries should be a periodic event, no more
than monthly. CADEX sells one of the few lines of battery
conditioners smart enough to not ruin or sharply decrease the
battery's life.

I have extensive experience with NiCad batteries, and I'm here to tell
ya, the more you discharge 'em, the shorter their lives.

Granted, every month you can find an article in X magazine expounding
on the benefits of deep-cycling, and the dreaded memory effect. But
if you look closely, about once a year you can find an article written
by someone who knows what they are talking about, and can show the
research to prove it. QST had two good articles last year. Watch for
'em. NiCads are too expensive to be abused. Be nice to 'em.

It's apparent that both of them moonlight for Radio Shack ;-)

800 MHz frequencies are usually trunked....yes, they may be a little
harder to monitor (your radio has to be able to receive 800 MHz) but
unless they are going to a completely digital system, they can still be
monitored.

The wattage of the scanner has nothing to do with anything.

I have freqs for Iowa City and Johnson County, IA that I monitor on a regular basis, but I can't quite figure out the Iowa State Patrol freqs. I monitor SOME transmissions on what Police Call tells me is right with difficulty, but tonight I got a crystal clear call on 159.090 which Police Call doesn't even list.

Does anybody know the correct Iowa State Patrol freqs for the Iowa City area? I'd be forever grateful. I have a PRO-39 modified and I live near I-80, so ISP calls would be interesting to me. Anybody else out there have this problem?

Robert,

155.655 is the ISP dispatch freq you want to be monitoring. In nearby Washington County, you can keep an ear on 155.565. There are mobile channels, too, if you are interested.

Send me a self-addressed, stamped envelope and I'll try to run through my fax machine a copy of the Iowa State Patrol map that shows the entire system for the state, including mobile and input freqs. This is an official map that I can send you.

Thomas M. Schaefer (toms@utw.com) wrote:
: The reality is that you will lucky to hear anything, even of your airline
: does allow scanners. I fly Delta at least 5 trips per month and they do
: allow scanners. They SPECIFICALLY state this in their magazine. There are
: no exceptions for the type of aircraft (so there goes the B-737
: argument).

Yep. Delta is one of the more easy to work with airlines. I use my scanner religiously whenever I fly. I also go to the extent of carrying one of the suction cup BNC antennas that I promptly stick to the window. Sure, the aluminium "tube" is quite a shield but I get plenty of reception from stations quite a distance away. Courtesey dictates that I use an earphone.

And, of course, I'd NEVER think about dialing in the handset freq for the airphones... :(

: Perhaps, these other airlines do not understand the
: difference. BTW, the few times I have taken a scanner on board and used
: it after 10,000 feet, even the flight attendent said that I could not use
: it. I had to refer her to the page in the SKY magazine about.

I've taken to carrying a laminated copy of that to show flight attendants on other airlines as well. On an American flight I had one of the flight attendents whip out her BC-2500 that she carries while traveling. Some of the nicest folks carry scanners...

: SO, the bottom line -- Delta allows scanners above 10,000 (or as soon as
: the seat belt sign comes on during approach). However, because of the
: orientation of the antenna away from the aluminum tube, it is very
: difficult to pick up much. You will hear the plane's communications, but
: it will be harder to hear the controllers particularly distant centers
: (ARTCC).

Now if the airlines were *really* customer oriented they'd provide us with an "in your seat" BNC jack and an external antenna... :)

Odd that no one has noted that Radio Shack's new slogan is (brace yourselves):

"You've Got Questions? We've Got Answers!"

Bwa-ha-haaaa!

My own RS story: I asked the salesman whether the future held a scanner that could read the data channel of a trunked system so it could track calls just like the originating equipment. He didn't know what trunking was so I had to enlighten him. Bad news when the *customers* have to answer the *employee's* questions!

Suggestion for a truth-in-advertising RS slogan:

"We've Got Questions. Do You Have the Answers?"

Ken

I'll listen to whomever I want to...

Hi folks,

I bought a RS PRO-51 on sale last month and have had a lot of fun with it. But now I'm thinking of ordering a better scanner from Javiation so I can get better quality and full coverage. Which is better price performance, the PRO-26, or the bearcat 2500 or 3000 XLT's.

They're all made by Uniden, right?

Around here, it seems like you can get more features for less price from the Bearcat models...

What other companies make handhelds that should I consider?

Is Javiation a goo splace to order this stuff from?

Thanks...

That's all very well and good Drew, but for most people, mounting
a length-tuned antenna 'high and in the clear' presents some
obstacles. Perhaps you and I differ on the term 'decent'. I was
only trying to give realistic expectations. I use a discone mounted
fairly high and clear, and receive quite well, but I also realize
not everyone will be as fortunate as I am.

You know, the more I think about this, the more ideas I come up with!
Of course you can't always plan these things perfectly...what if you
taped the phone conversations, and then when the right opportunity
arose, broadcast it to the wife/hubby, etc. Or get one of those cheap
kid's walkie talkies at RS and do a little baby monitor broadcasting-
they are on 49.83, a common 'space talkie/baby monitor' frequency.

Why bother? for like 20$ you can get a *REALLY* nice proggie that will
use input from your sound card. it stores infinante digits and will even
put a time date stamp on them. just plug your scanner or tape recorder
or vcr or whatever has touch tones on it into your sound card and away
you go.

LAPD air units frequently go to a TAC frequncy in the simplex mode when they are working with ground units at the scene of the occurence. When this happens in an area that's close-by I can continue to hear the voice traffic fairly well. Obviously, I hear nothing when the units are several miles away. Is there a way to improve the reception of simplex voice traffic even if you're some distance away? Thoughts would be appreciated.

When you hooked up the discone you also raised the noise floor.

Here's a trick that has helped me. Local FM b'cast towers played hell with
my Scout. I used an old Radio Shack FM trap (still sold for $3.00) with
adapters and rigged a short ducky mount and cable dash board mounted.
Since using the filter my hits have increased 10 fold compared to before.
Now if only we could knock down pager and TV b'cast signals we'd have
it made.

What antenna were you using? A target such as an airport is likely to be
in an urban or RF saturated envirnonment. Anyone who has ever used
a spectrum analyzer can appreciate this. It takes quite a bit of signal
to overcome the dozens of local pager towers that transmit upwards of
5 kilowatts of power, compared to less than 100 watts for many police
and fire transmitters, for example. The best bet is to use a short resonant
antenna cut for the band you are targeting. Unfortunately most of us
compromise and use either our scanner duckies, which are broadband
in design. The best by far has been the short DB32 antenna, it works
best in UHF and 800 mhz, but drops off at VHF and lower. Great for
cutting down pagers and FM b'cast, unfortunate for VHF air.

Personally, I too thought I had a problem, until I got freq hits
from a small aircraft overhead on final approach (perhaps 500 ft altitude),
and a police car much further than 500 ft behind me. If the background
RF level drops for an instant, you're bound to get a hit.

I don't think you have a problem with your Scout, it just takes some
getting used to using.

>P.S. - I am also interested in a list of space shuttle frequencies
> that I can monitor with my Radio Shack Pro-50 scanner.

Unless you live close to KSC, there is nothing to hear on VHF, UHF.

The shuttles primary air/ground freqs are in the microwave region. They can be heard with the proper equip...if one has a deep pocket. :)

Some freq directories do show a UHF listing; although it is now known this is rarely used.

Finally; when the shuttle transmits, the signals are processed via TDRS "Tracking and Data Relay Satellite " and are very directional to the ground controllers.

If any would like, I'd be happy to post a short description on shuttle communications systems and ops...

BTW...My brother works at Kennedy Space center as a Sr. Communication Engineer and has worked directly with the on-board radios. (pardon my bragging)

Pro-51 Scanner for sale $190 + extras
Scanner, 1 month old picks up frequencies into
the cellular bands. 200 channel.

I tried scanning but decided that it wasn't my interest
included in the package is a mobile antenna plus
bracket to mount to the car and the 95 Police Call
book from Radio Shack.

$190 prefer to sell to someone in the S.F.
south bay region. but will sell if prepaid with
cashiers check or can do COD if you cover the
extra expense. If you send the check first I will
cover shipping UPS brown (ground).

Marc Jensen
marcj512@aol.com
MJensen@Ventritex.com
W(408)522-6212

Here are the specs/information on it:

- 200 channels
- 800 Mhz
- "Band-Search" for VHF-air, Marine, Fire, and Weather
- HyperScan with 50 channels/sec or 100 channels/sec
- Priority Mode
- Lockout Channels
- Backlight
- Keypad lock button
- Memory Backup
- Earphone jack, external power jack, charging jack, and BNC antenna jack.
- Rubber ducky antenna included.
- Takes 4 AA batteries.
- Can run off AC current or DC with appropriate adapters.
- Covers the following:
29-54, 108-174, 406-512, 806-823.9375, 851-868.9375, 896.1125-956 Mhz..

From the catalog: 6 1/6" tall, 2 7/16" wide, 1 11/16" thick

The condition you describe is usually caused by deterioration
of the electrolytic capacitor in series with the audio amplifier
output and the speaker. I've replaced these caps in other models,
including the PRO-2004 and several BC800XLTs.

The Scout is not a scanner. It's much more like a frequency counter. As
such, it must be in the Near Field of any transmitting antenna.
Obviously, it wasn't in such a near field.
Your scanner has several differences from a frequency counter. It will scan
or search one discrete frequency at a time, while the FC will receive it's
whole spectrum at once, and must detect a single signal as being stronger
than all other signals, and then lock on that one freq.
The scanner can have a much higher sensitivity than a FC, because it only
looks at one freq at a time.
Hope this helps.

Well, I must confess that I have had the Radio Shack 5/8ths 2 meter magnetic mount antenna blow off a couple of times. Of course, it always was while driving in excess of 70 mph while passing within 3 ft of an oncoming 18 wheeler also traveling in excess of 70 mph while the prevailing winds were focusing the shock wave on the compact car I was driving. I would guestimate the wind on the antenna to be in excess of 120 mph, a bit above the recommended maximum speed of 65 mph. In routine driving in excess of 90 mph and staying more than 6-8 ft away from oncoming semi's, I have never heard the mag mount rattle. Say, any volunteer passengers for my next road trip???

: I recently got the latest SCANNER MASTER catalog in the mail and in it
: is a item known as a SCANNER BOADCASTER and it states that you can
: play your scanner through your car audio system by tuning in to an open
: FM channel.

Since you can't use the car radio and the scanner together why not just use one of the cassette adapters that plug into the cassette slot and has a wire connection to the earphone jack of the scanner (assuming that you *do* have a cassette player in the car). I've seen some of the RF links and they left a bit to be desired. Maybe this one is different...

Since I enjoy having a car radio *and* a scanner I usually rely upon a portable amplified speaker when I'm away from my usual mobile monitoring post.

I am trying to decide if I should by a new antenna for my bc200xlt. I currently am using either the original or a telescoping antenna from radio shack, which is band tuneable by adjusting length. How much better reception will I get with a better antenna such as the RH77-CA I have heard mentioned. A salesperson I talked to at Tucker Electronics said I would see very little improvement over the factory antenna.

Also, currently I am using RG-59u cable, which I had laying around, to connect to my outside antenna. How much signal loss will this cause vs. RG-8 cable.

Thanks

Billy

Sometime back I bought a Southwestern Bell FA1010 Digital Answering machine.
It is now out of warranty, but has "a problem" that I find annoying.

I am an Amateur Radio operator, and consequently have a fair amount of
radio receiving gear around. This FA1010 generates a lot of nasty
electrical noise on a multitude of radio frequencies, enough so to
seriously interfere with the radio work.

What I'd like to know is if there are any other folks out there with
this same machine that have noticed a similar problem.

I contacted the "help line" in the owners manual, and they were really
very little help. The guy said the machine "probably had a defective chip"
but said that if it is out of warranty (pretty sure it is) they don't
service them, all I can do is replace it. Like I said, not especially
helpful, as the machine *works* in all other respects.

FYI, something else that I've noticed is that after a couple months, the
internal clock (which you set for time/date stamping) will have fallen
about 1 1/2 hours behind. Whether or not this is in some way related to
the RF noise, I don't know. Again, I'll toss that out to the assembled
masses. :-)

If you have related info., please email me.

I regards to the following article written by foxcat I wish to say the following: I have had both the glass mount and the magnet mount. The glass mount sucks and is a piece of crap. I returned it with much difficulty and bought the magnet mount. The magnet mount works really well for reception and holds in place fine. I have gone at least 80 mph in my truck and it has never moved or fallen off. I don't know why his fell off at 60. Don't buy that shitty glass mount antenna.

I agree with you. Anyone who is prepared to take even the slightest risk with other peoples' safety in order to indulge in his or her chosen activity on board an aircraft is not the sort of person I would want as a friend.

Aircraft of a particular type may look identical from the outside, but in fact they can be highly customised for individual airlines - indeed, I suspect there are differences even between individual aircraft within the same fleet.

The only way to be sure that something isn't going to intefere with the aircraft control system is to try it and see - and by then, up to 400 people are at risk of being sacrificed to the selfishness of one individual.

: >>
: >> Any help appreciated...
: >> Jim Howard
: >> howard_jim@isa.com

: Jim:

: The entire cellular concept is built on the idea of frequency reuse.
: If a radio station in New York City is using 770 kHz, for instance,
: and the station is broadcasting at an incredibly high power so that
: people in NJ and CT will hear, no other radio station within hundreds
: of miles can use the same frequency because the two would interfere
: with each other.

: Since cellular frequencies are so scarce, and there are so many users,
: someone years ago came up with the idea of CELLS where certain groups
: of frequencies are used at LOW power. By doing this, a cell 15 miles
: away could use the very same frequencies. Another cell 15 miles from
: that one could use the same frequencies...and so on. Why is this
: good? Because then many people can be having simultaneous
: conversations on the same frequencies at the same time and NOT
: interfere with each other.

: In order to reuse frequencies like this, however, you must have LOW
: power. And low power converts to a small coverage area, or a small
: cell radius. A mobile traveling 60 MPH through a cell will need to
: continue service on another cell with different frequencies. Hence,
: the call is "handed off" onto another frequency.

: The breaks you hear in the conversation are just that. And there's
: absolutely no way YOU could know which frequency the call will

This is by far one of the best short-and-quick descriptions of cellular basics I've seen on the net. If there's a FAQ, I think this post should be added in.
I have only one thing to add- you CAN follow a call to the next frequency. You either need an interface with your radio (either stand-alone, or computer-interfaced unit) or if you have a cellular phone of your own that you have put into "test" mode, you can use it to monitor the data stream and it will tell you on what frequency the conversation is about to be "handed off" to. It's not exactly as simple as it sounds, but it IS possible.
If you have a Motorola cellphone in test mode and you are listening to a conversation (illegal, blah, blah, blah) with code 11XXX# (where X is the channel) you can press 40# to monitor the data stream. When the call is handed off, you will see data scroll across the phone's display. You then need to decode this string and get the channel that the call is going to.
You can then use a lookup-table (or a program like CM.EXE [Cellular Manager]) to convert the channel # to a frequency to punch into your scanner.
-ken

: continue on. In order to know that you would need to know:
: (a) where the mobile is
: (b) in which direction the mobile is traveling
: (c) which frequencies are assigned to the cell that the mobile is
: traveling into

: The call will continue on one of those frequencies IF there are idle
: radios -- it could continue at a less desirable cell if there are no
: idle radios to serve the mobile.

: It should be obvious that there are no rules which can help you find
: the conversation once it hands off. By the way, the new conversation
: you hear is a different mobile handing IN to that radio.

Will be taking a riverboat cruise from LeClaire, IA to Galena, IL the
first of the month. Anybody have some tips on what to listen for
while on this Mississippi River tour?
Thanks

Bob

I think you're guessing correctly.
Although I'd make sure they are *real* spread spectrum, some are
just digitized voice.

Not first hand, but the Tropez model and successors from Vtech
[some have AT&T brand, others, earlier, have Radio Shack] in
the 900 band have been reported to have ranges of a mile or more,
excellent quality. part of the attraction is the large number
of channels, the immunity to "normal" [nbfm analog] monitoring,
and range and quality. Maybe someone else can expand....
/mark

Hello, a guy at work just dropped of a new condition Uniden BC55XLT for me as he learned that I am interested in radios. He said I can pay him "whatever you come up with that's fair". I am unfamiliar with these scanners as my only experience is with Icom tranceivers. What was the retail value of this thing and what is a fair used price?

Also, are there any mods for this unit to allow cellular monitoring or increased channels?

4389. Re: 800 MHz police

Newsgroup: rec.radio.scanner
Date: 1995-09-20 00:00:00 UTC
From: jamesmc@delphi.com
Message-ID: <RnJCW6B.jamesmc@delphi.com>
Source record: 248922

hi folks
I just wanted to bring up this question because its going to come up
sooner or later.
The Massachusetts state police are currently using a low band system and
a 800Mhz trunking system concurrently, soon however they will be bringing
up a couple of channels on the trunk using DIGITAL, they will only have
a few radios at first that can access them, but eventually the whole system
will be DIGITAL (a few years from now). They want to bring it up slowly to
make sure that it meets the digital standard that APCO(association of public
safety communication officers) is providing. SO the question is: assuming
that its NOT encrypted, and that there is a standard, why couldn't uniden or
some other electronic mfg make DIGITAL SCANNERS???
ANY IDEAS??? Thanks, Jim.

4390. Wanted: Scanner with Cellular

Right now I have the new RS pro 26, but it does not receive cellular freq, just images. I am prob going to return it to RS. I am looking for a pro 43 or a Pro 51 that is fully capable of receiving cellular calls on the 800 mhz band because I listen to these images quite a bit on the Pro 26 and I want the real thing. A quick question: Does a scanner that receives full 800mhz pick up both parties on the same frequency? Or am I going to be listening to a "one-way" conversation? Regardless, my interest still remains. Please email me back with offers

This breeds comtempt and disrespect for the law.

While I am law-abiding and don't listen to cellular (even if legal I wouldn't
because I don't have the time or inclination) I am VERY concerned about
this law and its implications. It doesn't guarantee privacy, so it is useless
for the cellular customers, and it makes a common and easy practice illegal,
which creates a whole new group of "criminals." Not a good law.

Hi
I have a Bearcat 2500xlt. It has annoyance with the Priority and Scan buttons.

1) Am I the only person in Canada with this model? (I only seem to hear stuff about the Radio Shack Scanners)

2) If you have this scanner, do you understand what i am talking about with Scan/Priority problem. Uniden played dumb to the problem.

3) Is anyone out there?

4) I tried the Scan /2/9 keys while turning the unit on...bad idea. All frequencies were erased.

5) I tried the Manual/2/9 keys while turning the unit on....I got the test frequencies. So what now?

If you can call BBSes, try Frequencies R Us 919-851-3121,
MMS/Raleigh Amateur Radio Society BBS 919-779-6674 or
Gadgets & Gizmos BBS 919-772-9745 and download the
TRIFREQ.ZIP or TRIFREQ.TXT file. This will give you about
12 pages of frequencies for the Research Triangle area (Raleigh/Durham
and central N.C.), formatted for sorting by a spreadsheet or database
program, or readable in ASCII.

If you can't call them, let me know and I'll try to get the list
to you another way.

Hey Jim, Where did you get that badge, in a box of Crackerjacks? You're regularly off the mark when you decide to police prices! I sold my Bearcat200XLT last year for $175, without breaking a sweat. If his unit is in excellent condition, already cell modded, then $200 is a fair price. Why don't you got try to price getting a new one and see what you come up with and report back?

I hereby demote you to Corporal and appoint myself Chief, Price Police.

If the antenna fell off at 60, and the assertion was it would sustain
speeds in excess of 55, and you complain, then I agree that one of you
is full, but I'm not convinced that it is Radio Shack. It sounds like it
did what it was advertised to do.

Uh, what risk???
Permitted devices are permitted devices. If an airline says you can
operate an FM receiver after takeoff who am I to decline the invitation.

: The only way to be sure that something isn't going to intefere with
: the aircraft control system is to try it and see - and by then, up to
: 400 people are at risk of being sacrificed to the selfishness of one
: individual.

Lets try to be clear as to the nature of the interference created by
scanners. Most of them toss out a signal on the displayed freq plus or
minus the IF frequency. That would be a carrier usually 10.6 or 10.7 Mhz
above or below the displayed freq. depending upon the mfr. If you were
listening on 120.0 then a BC-100 may put a low power carrier on 130.7 Mhz.
If the crew made a freq change to 130.7 they *may* hear a hetrodyne but not
much more than that.

A more serious and less probable (but still possible) effect would be that
in some *rare* instances a scanner might cause some deviation to some of
the nav equip but with the redundancy it should be quickly detected and
teh worst case scenario would be that the equip would get a writeup of
some sort and some maint. tech would have to perform a needless check of
the equip.

Now if you were playing with an oscillator on the ILS freqs then you
might have a valid concern. And *that* is one of the reasons that they
don't want RF generators used in the cabin during ascents and descents.

The best publication to get hold off is "The Scanning Directory". Its as near as you will get to something like Police Call etc. Its a pretty good guide to point you in the right direction when searching for certain agencies.

You will find local Police on 451-453MHz, NFM 25 Khz spacing and also in the 147-153MHz area, some of these will be AM depending on where you are going, spacing is 12.5KHz

Gas Boards and other utility Companies will be in the 138Mhz area, Fire services are down at 70MHz, again some in AM. Ambulance services are in the main the the high 160MHz area with duplex +4.8MHz.

If you are visiting a partcicular area try asking in alt.radio.scanner.uk - I'm sure somebody would provide a little more area specific info.

Hope this helps.

I understand how the "handoff" between cellular phones works.

I assume that the system uses 2 frequencies (cell mast -> cell phone)
and (cell phone -> cell mast) to allow it to be full duplex.

If so, is there any tie up between the two, ie is the relationship fixed
(say cm>cp = cp>cm+25 Mhz).

The frequencies I think you are referring to are the 100MHz area, right?
Unfortunatly this has now been taken up by 'Classic FM' in the UK, plus

4415. All PRO-2006's modable?

Hi there...

I have a quick question about the PRO-2006. All all of them cell
modifiable? Have there been any versions that aren't?

Please mail you replys to:

aphex@cyberspc.mb.ca

As I don't get to read this group that often.

Thanks...

Whoops...try again!

The area is now taken by Classic FM (countrywide), plus various regional
independants (eg Kiss FM in London, Galaxy FM in Bristol).

It used to be difficult *not* to tune through the police band back in the
late 70s & early 80s! Indeed, one pirate station (Radio Isis?) based in
Oxford used to use the slogan 'We're on the right side of the law'
as they broadcast in the 104MHz area! :-)

Matt

: Can someone post the approach/departure/tower/ground freqs(both UHF/VHF) for
: Edwards AFB? Thanks.

Sure, Here's a bunch that I plug in when I go prowling. Aircraft
operating in the Edwards, Nellis, and China lake complexes can appear on
most of the UHF channels listed depending upon what they're doing. Some
of the real interesting stuff comes out of the Naval Weapons Center at
China Lake weekdays between 10 am and 3 pm when they launch some of the
missles from aircraft. Makes for some good listening! But you need to be
north of Red Mountain for clear copy...

Nope. The 2006's are ALL modifiable. One of the best scanners ever made,
IMHO. Get one either used or out of Canada before they're all gone.

4422. HELP: Roof antenna

Newsgroup: rec.radio.scanner
Date: 1995-09-21 00:00:00 UTC
From: foxcat@omni.voicenet.com
Message-ID: <foxcat-2109951133330001@philly45.voicenet.com>
Source record: 248855

I live in the dense woods on a hillside. My trees are at least 100 foot pines, ash, cedar, etc. Anyway my reception isn't so grand with the PRO-26 in house (I use the Radioshack Model 20-012 Magnet mount antenna indoors when home).

I was interested in mounting a discone antenna on my roof. I have an old TV antenna that's long been abandoned and was wondering if dismantling the TV antenna and attaching a mast and a discone antenna would help.

Realistically, how tall a mast can I mount on my roof before I need guidewires to keep it from bending? I imagine to get a clear line of sight 360degrees I would need a 100-foot antenna, but that's out of the question.

Can anyone suggest anything to help in solving my problem. Or am I overestimating my problem?

I.E., HELP!

Thanks!

Does that TV antenna have a rotor on it? If so, turn it on it's side and attatch your coax. You will then have a directional beam for your scanner that will substantially outperform a discone!

Pete (rogerh@cris.com) wrote:
: >P.S. - I am also interested in a list of space shuttle frequencies
: > that I can monitor with my Radio Shack Pro-50 scanner.

: Unless you live close to KSC, there is nothing to hear on VHF, UHF.

EXCEPT - NASA has given permission for amateur radio operators to
rebroadcast shuttle communications on local repeaters. The comms are
available from a regular communications satellite (forgotten which one).
This means that Pete should search the 2-meter and 70-cm ham bands to
see if any rebroadcasts are going on in his area.

When EVAs are in progress, though, it MIGHT be possible to pick up
the suit-to-shuttle radio links, since they're in the milair band.

: If any would like, I'd be happy to post a short description on shuttle
: communications systems and ops...

Please do!

What does digital sound like vs. DES scrambling (can DES be done
w/out using digital?). While I'm at it, what would spread spectrum
sound like?

Bill was just here in CO and all I got on the SS frequencies was
strong static.
I'm wondering what methods they were using. I expected the
scrambling to sound much like the data channel on trunked systems. It
didn't.

)Thanks.
)
)Henry.

I am not precisely familiar with this exact model, but I am
knowledgeable about electronics, and have a couple of scanners myself,
as well as other receivers, both bought and of my own design.

What you describe sounds like POWER SUPPLY FAILURE. If you have a "wall
wart" type of supply, try getting hold of a similar one and try it out.
Or running off your car battery (if your scanner is capable).

If you have an internal AC only supply, then you possibly have a blown
fuse. Check for a fuse compartment. You may need to open the case
(unplug first! don't just turn it off, unplug!).

Otherwise, you need to either learn some electronics, or go to just
about any electronics repair shop that handles receivers (CB, etc. I'm
not sure I would trust one of the "VCR" repair shops, as they usually
fail mechanically and that is the expertise of the people who man them).

)
): That is not quite correct. Law made by the courts is
): called "case law". Common law arises from the mores of
): society and is often the basis for written law
): (legislation). The courts often attempt to interpret the
): intent of legislation based on existing common law.

He is right ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

)Case law is the American equivalent of English common law -- which is
)law made by judges. No matter which word you use, the basic info is
)sound...that is up to now, the courts have ruled in the absence of an
)express law that cordless phone users had no reasonable expectation of
)privacy. However, this ruling should no longer stand since the
)legislation changing the ECPA expressly made listening to cordless
)phones expressly illegal.

You are wrong ^^

Case Law is exactly that, Case Law. Common Law is based on mores of
society. American Common Law has departed from British Common Law, but
they were at one time the same, and differs somewhat from state to
state. It is the law about which we say "ignorance of the law is no
excuse", because =everyone= knows it - it is founded in the society
itself. Common Law often governs Civil or Tort Law.

In Texas, there is =no= Common Law. It is expressly excluded, only
Statutory Law being recognized. But there is, of course, Case Law,
which depends on the principle of Stare Decisis, and is not law at all.

)Note, however, that the revised ECPA has not yet been tested in the
)courts (to my knowledge). It will be interesting to see how the courts
)rule.

It sure will! Especially if =I= am on a jury. Support the Fully Informed
Jury Ammendment (FIJA) in -your- state.

)
)Dan Balogh

Case in point here in the Dallas, Texas area. A woman in Dallas county
overheard (on her room monitor receiver) a crime being planned on -
guess what - a cordless telephone. She reported it to the local police.
They prevented the crime, and she was commended. I forget details, but
it made the papers and TV news around here.

Nobody mentioned the ECPA.

Pardon me if this question is not appropriate for this group, or better yet, direct me to a better source if you know of one, but...

I've been thinking of getting a cell phone. There is a lot of sales hype about those things, but other than that, I'd don't have any source of information about them. Is there a cell phone FAQ somewhere on the net? Does anyone who has more experience with cell phones have advice to share on the topic?

I've been a scanner user for long time, but all I know about cell phones is related to the band they occupy, etc -- nothing about actually using one, or what criteria to consider in selecting one!

I'd appreciate any advice you folks could offer. - Dave

He's right, forget about the discone if your main interest is scanning. Try the TV on it's side, I've had very good results that way. I'm also happy with the Scantenna (omni) that I bought from Grove for aboout $40 (I forget). You might want to consider that too--cheaper than buying a rotor.

Usually, but not always. Radio Shack makes a lot of junk, but there are a few jewels in their crown of thorns. I bought a PRO-34 for the sale price of $239.99 in August, 1989. It has been dropped on concrete, fallen off the roof of a moving vehicle, had high voltage run through it, suffered temperature extremes (from -30 degrees during Minnesota winters to 130+ degrees on the car seat during Florida summers), and it still works perfectly.

Also, I think you'd be hard-pressed to beat the value offered in their HTX-202 for a 2-meter HT at the current sale price of $199.99.

Right...but how can we expect the flight attendent droid to differentiate between a superhet receiver and a TRF receiver? They don't even know the difference between a transmitter and a reciever. Last time I was using my scanner on the aircraft (completely legal on the airline that I took as per their in-flight magazine), she immediately came over and said "Sir, you cannot use your telephone on the flight, sorry."

The Dade county SQUIRT units are a form of ladder truck. It has a boom
on the top that can extend and rotate similar to a ladder/bucket type
truck however it is NOT designed to facilitate personnel. Thus it is
mainly used to "SQUIRT" water for outside/large scale deluge attacks.

Barry D. Carrington (barryd@spectra.net) wrote:
: Thats funny, I get a call from my cellphone company first thing
: the next morning asking me to come and have my phone
: reprogramed.

the latest buzz is that the cellular companies are reprogramming
customers phones for free once they have been tickled by the "clone
detection" software.

The topic of this thread should not be confused with individual phones that
are configured to answer to the same phone number but with different ESNs -
kinda like an extension hardwire phone. In those cases an additional
charge is added to your bill and both phones respond to the same phone
number but each maintains its own electronic ID (unlike cloned units).
The only trouble with this is that one phone can not call the other one.

4460. Motorola Cordless phones

Newsgroup: rec.radio.scanner
Date: 1995-09-22 00:00:00 UTC
From: cyuzik@direct.ca
Message-ID: <43tph2$9fd@grid.Direct.CA>
Source record: 248745

I was thinking about buying one of these new Motorola cordless telephones that has "Secure Clear". Is there ANY extra security with this? And, will it prevent other cordless phones in my apartment building from stomping on my calls?

Thanks.

>Hi here's a newbie and a silly question : what is an optoelectronic
>scout device ? I tried to guess but I'have failed to...

It's a seriously cute gadget manufactured by Optoelectronics.

It's around the size of a twenties pack of cigarettes and has a large
LCD on the front panel with a few control switches.

Basically what it does is to display and record to memory the frequency
of a nearby radio transmitter.

For example, at the scene of a car smash, where several emergency
vehicles may be present and using their radios, you would be able to
immediately see what frequencies they were using as you drove past with
your Scout as long as they were transmitting at that moment.

A VERY cute feature of the Scout is Reaction Tune. This allows you to
connect a cable between the Scout and a scanner (AR8000, AR2700 or any
radio supporting Icom's CI-V protocol) and each time the Scout detects
a transmission it tunes the radio at the same time so that you don't
have to key the frequency in manually.

It's a really useful piece of equipment. And I don't even work for Opto!

Tim.

The way I got around that was to put the headset piece in the seat pocket when they did the last cross-check. After they had a seat, I plugged back in. Of course, your solution works the best expecially on most newer planes with the electronic connection versus the air connection. Of course, I do leave the headset on the seat so they can find it. This is one item I do miss on Delta and I think I will write to them and ask for it. Maybe if enough people who fly Delta will ask, they will consider it.

Mark Fraser <mfraser@vanbc.wimsey.com> wrote:

>Although I'd make sure they are *real* spread spectrum, some are
>just digitized voice.

For privacy this is probably fine and most of the digital ones I have
seen say they are encrypted as well.

That would thwart probably all but the NSA.

>Dale Mosby (dale@sequent.com) wrote:
>: I am thinking about getting a cordless phone. A requirement
>: is something that cannot (within reason) be monitored. The
. . .
>: base and remote agree on the shifting and another of the same
>: brand won't listen in. Is this correct or are they also subject
>: to monitoring.

The spread spectrum phones that I've seen seem to be frequency hopping
instead of truly spreading the signal energy over a range. So while
this has decent privacy and probably intermod avoidance it may not be
as good as true spread spectrum. At least as I understand it.

>: I'm a ham operator and also would hope that these might be a
>: bit more RFI immune that the other cordless phones are. As a ham
>: and scanner owner I understand how easily monitored the typical
>: "10 channel" cordless phones are and this is not acceptable (at
>: least not for me to use as a phone).

I would suspect that the RFI problems would depend more on the
susceptibility of the electronics in the phone and not the modulation.

Have you seen any difficulty? I use a 46/49 phone and a cell phone
and haven't had any problem other than a little bleeding in from a 2
meter packet transmitter.

Local laws I wasn't referring to. Nor the ECPA. Let me quote the
implementing federal regulation:

47 CFR Section 15.9

Except for the operations of law enforcement officer
conducted under lawful authority, no person shall use, either
directly or indirectly, a device operated pursuant to the
provisions of this part for the purpose of overhearing or
recording the private conversations of others unless such use
is authorized by all of the parties engaging in the
conversation.

Guess which Part covers cordless phones. Guess what "use ... indirectly"
can mean.

Andrew Cogswell <medman@qnet.com> wrote:
)Didn't I see someone posting about people ripping you off by asking for $5
)for mods to scanners? I just got one of those emails, and I don't see the
)message refering to it now...

Has the vernacular changed while I wasn't looking? I thought "ripping
off" meant "thieving". How is it theft to sell information?

I responded to one of the ads, and got back a list of two mods to my
scanner (Uniden BC 855 XLT). I already had figured the mods out on my
own without any help (unblock cellular, double channels from 50 to
100), so I didn't send them any money. I also found 2 1/2 keyboard
hacks on my own, which they did not list. But what am I out?

They told me exactly what they offered, and exactly what they charged. I
didn't want the information, so it cost me nothing.

This is not a scam. They seem completely aboveboard. If you don't want
their product, then don't buy it.

The scanners purchased in Canada have been the same as those available in the U.S. They have always required modification.
Since Canada does not have a ban on import or sale of cellular modifiable scanners there are still older models available here that are not available in the U.S. These are being replaced by the same models available in the U.S. It appears that the manufacturers do not want to make another model for the Canadian market.

Could someone on the net please post the Keypad sequences
for the various test modes for a Bearcat SC-150 scanner?

I have been told that the modes are similar to a Pro-51
but not exactly the same.

Also are there any mods for cellular restoration?

I had it apart and it looks like there are two surface mount
pads that are open next to the CPU and two chip type parts
that could be moved. Any body know about this?

I sure did. A friend of mine owns a dealer store and doesn't stock ham
stuff so I had him order the thing. I read everything he had received
about the radio, looked at the box it came in at a hamfest, talked to
other RS employees about this, and did not know that they had done this.
I guess that the point I'm trying to make is that they could put this in
their literature since most other radios DON'T work this way

: minus the IF frequency. That would be a carrier usually 10.6 or 10.7 Mhz
: above or below the displayed freq. depending upon the mfr.

True, but incomplete...

There are other frequencies (than the Local Oscillator) "happening"
in virtually all modern scanners. If you don't believe this, then
seal up your scanner in a metal box, program it to search from
top to bottom, and count the birdies (a drastic example, I'll grant
you...). The last scanner that I had apart contained no less than
4 separate xtal oscillators (there might have been more...).

Anyway, as long as you confine your activities to "at altitude" then
I certainly don't mind. :-)

I once was given permission to use my 2m handheld in an airplane.
The plane was virtually deserted...3 passengers total! We passengers
were up (practically climbing around in, "wanna fly for a while"...)
in the cockpit. I asked if they minded - they didn't mind a bit.
They told me to just make sure that it was off during approach.
Had a ball...

>jack was sort of an after thought.

If I recall, the BC220XLT has a stereo earphone jack, too, and it's
a great idea. The Radio Shack portables (even the models manufactured
by Uniden) have old-fashioned monaural earphone jacks which are not
really compatible with popular "walkman" style headphones because
they divert audio to only one ear.

The BC3000xlt provides both external speaker and earphone jacks.
Earphone and external speaker jacks are usually designed to furnish
audio signals at 2 different levels.

The earlier BC200xlt had but one jack -- for an earphone.
Many 200xlt users wanted to connect an external speaker and were
disappointed that the earphone jack in the 200xlt had a series
resistor which limited audio out level. Perhaps you read the "mod"
to short the shield contact of the 200xlt earphone jack to the
hood of the antenna BNC connector? The mod bypasses the audio
limiting resistor so more signal is available at the earphone
jack. (The earphone jack becomes an external speaker jack in effect.)

Having 2 separate jacks enhances the scanner's flexibility.
I'd like a computer interface jack, but I see a good motivation for
providing 2 audio out jacks, too.

> Just curious, is this a FAR that applies to all aircraft including private?

Actually the reason for this rule doesn't have anything to really do with
aircraft safety. From a high altitude (actually doesn't have to be that
high) you will activate many cells in many systems. This would not be good,
and would be downright confusing for them and your cellular phone. Considering
that most cell sites have antennas with a directional pattern that tries
to limit the cell coverage area, and you will probably not activate a cell
that is right below you, but a few of them off to either side. It is amazing
how far 3W @ 800MHz will travel from even 5000ft.

* Crossposted from: alt.algebra.help

Save big $$$ on your long distance phone calls with service from NTC. NTC has been in business since 1988 and provides 100% digital fiber optics long distance service in all 50 States and Canada. The company is owned by IncomeNet, headed by Sam Schwartz, formerly of Commodore Computers.

Here are few things that make NTC a good choice for all of us:

1. Billing in 6 second increments: NTC bills every 6 seconds rather than in increments of one whole minute. If you just make 20 calls a month that average a hang-up time of 30 seconds (easy to do with modem calls) you could now be paying for an extra ten minutes of time when you were not even
using the phone.

2. Prompt Pay Discount: NTC provides customers of residential services a discount up to 32% for prompt payment of their long distance bills.

3. No "Bong" fees: There are no operator surcharges on using the NTC calling card.

Here's a sample of NTC pricing vs. AT&T, US Sprint and MCI. This is based on a
4.5 minutes residential day time call:

1- 10 miles NTC: 0.8487 AT&T: 1.1500 Sprint: 1.1000 MCI: 1.0995
11- 22 miles 0.8487 1.1500 1.1500 1.1475
23- 55 miles 0.8856 1.2000 1.1500 1.1475
56- 100 miles 0.9225 1.2500 1.1500 1.1475
100- 124 miles 0.9225 1.2500 1.1500 1.1475
125- 292 miles 0.9225 1.2500 1.2000 1.1975
293- 430 miles 0.9594 1.3000 1.2000 1.1975
431- 925 miles 0.9963 1.3500 1.2000 1.1975
926-1910 miles 0.9963 1.3500 1.2500 1.2445
1911-3000 miles 0.9963 1.3500 1.2500 1.2445
3001-4250 miles 1.1070 1.5000 1.5000 1.4995
4251+ 1.2177 1.6500 1.6500 1.6495

This is a day rate comparison, based on a $25.00 long distance bill, with 18% prompt pay discount. NTC is 6-second billing, all other carriers are 1-minute billing. Tariffs filed as of 1/12/94

If you are interested in this I'll be more than glad to send you more literature and a sign-up form via snail mail. Just send me your mailing address
and the number of billing phone lines you have.

The sportcat doesn't cover the cellular range, it is skipped in scanning. It does however allow you to monitor an image of a cellular phone call. Sometimes due to the increments of scanning in the 900mhz range the call does not come in very clear. But you can monitor cellular using the 894mhz to around the 915mhz range.

IMHO

I've had one for about 3 years now and have found it an excellent scanner. Good sensitivity and workes extreamly well with just the whip antenna that comes with it.

I don't know the fine points of electronics but I am sure there are others out there who would be happy to elaborate.

The only bad thing with the AOR's is the manuals stink! Must be written by some stuck in the lab techie. They really need to find someone else to redo them. You can figure them out but it takes awhile.

Good luck! <g>

OK, I thought I knew all the itinerant freqs (used in general use walkie-talkies, among other things...They were designated by a color and a dot or star...Like this:

Red Dot: 151.625 (assigned to mobile companies)
Blue Dot: 154.570
Green Dot: 154.600
Silver Star: 467.850
Gold Star: 467.875
Red Star: 467.900
Blue Star: 467.925
Brown Dot: 464.500 (assigned to mobile companies)
Yellow Dot: 464.550 (assigned to mobile companies)
White Dot: 462.575 (GMRS)
Black Dot: 462.625 (GMRS repeater)
Orange Dot: 462.675 (GMRS emergency/REACT)

But now, I start hearing about itinerant "J" or "K" frequencies and other names...What is up with this? Are J and K, etc. just different names for the same old freqs, or are there more itinerant freqs?

Scott in Iowa

Has anyone got this program to work? I built the required circuit
which appears to be working ok but I get nothing on screen when tuning
into pager freqs.

My name is Scott Glasrud, and I am running for the New Mexico State Senate during the 1996 elections. One of the reasons I have chosen to run is to combat the proposed state and federal regulations of the Internet. As you know, the Internet was never designed to be regulated! It was designed to allow communications in the event of anuclear war or a major catastrophe. I OPPOSE REGULATION, and if elected will fight to preserve your constitutional rights. HOWEVER, I NEED YOUR HELP!

I am asking each person who reeives this message to send $5.00 to the Scott Glasrud Campaign Committee. If we pull together, we CAN protect our first amendment rights! HELP ME show the politicians the POWER behind this important NETWORK. Please send contributions to:

The Scott Glasrud Campaign Committee
11024 Montgomery Blvd. NE, Suite 179
Albuquerque, New Mexico 87111

Thank you!

The pro-43 is triple conversion. The pro-51 is only dual conversion. The 51 scans faster than the 43. All in all, the 43 is a much better scanner. If you can get a 43 that does not have an "A" in the SERIAL NUMBER, then you can modify it to receive cellular.

I just took a flight on United this past weekend... I had my PRO-46 in
my hand when I boarded. The attractive flight attendant politely
told me that I must keep my celluar phone turned off during the
flight. I advised her that it was not a phone, it was a scanner.
"Whats a scanner" was her reply. I explained that it was a receiver
capable of listening to the pilot and tower talking to each other.
She seemed intrigued by the possibility and went about her work with
no other comments. Then to my total amazement, the captain's
anouncement said that all tower communications could be heard on
channel nine on our complimentary headsets. I decided to spare my
batteries and listen on there. Much nicer than my earphone, and much
clearer.

I wonder if other airlines do this as well? Anyone...
Regards,
Pedro

Good try, but no cigar Andy! How in the hell would the police know
you made a wrong turn? Just tell them you were coming from the other
direction. A better example would be to say that while you were
robbing someone's house you heard someone being murdered in the
basement -- and it was impossible to hear unless you were in the
house.

Of course, brandishing an unlicensed gun to stop a rape is a more
plausible real-world example that may occur often.

Cheers!

Dan

Hi Dave:

Three things:

I have a Motorola Trunk mount Cellphone, and I have no complaints.
I would definately recommend the Moto products.

Look before you leap on buying one of the phone + cell service
packages. You probably can do better by purchasing the phone separately,
then arrange for the service at the best rate plan for your use needs.

As for the service provider, I would suggest the wireline service
provider.

Need more, just E-Mail me.

>>>jumping up and down about cell phones on planes) the use of cellular
>>>phones on board any aircraft when airborne is illegal - they must be
>>>turned off when you are flying. But in a communications emergency - as
>>
>> Just curious, is this a FAR that applies to all aircraft including private?

This specific prohibition is not in the FARs. FAR Part 91.21 prohibits
the use of all portable electronics devices with certain exceptions. But
there is not FAR that expressly says you can't use a phone on board. The
FAA has advised airlines not to allow any intentional radiators once a
plane has left the gate.

However FCC rule 22.911 (I believe that has been moved and the same text
is no under 22.925) specifically addresses the use of cellular phones
while airborne. Use of a cellular phones on board any aircraft while
airborne (including balloons).

>Actually the reason for this rule doesn't have anything to really do with
>aircraft safety. From a high altitude (actually doesn't have to be that
>high) you will activate many cells in many systems.
[snip]

FAR 91.21 exists for reasons of aircraft safety. But the FCC prohibition
is for the reasons you state.

>It is amazing
>how far 3W @ 800MHz will travel from even 5000ft.

Actually... unless you're packing a "mobile" cellular phone on board it
probably much less power. Hand held cellular phones transmit at 600mW.
And 6/10th of a watt can go a long way from high altitude. But another
"however"... at the normal cruising altitudes of most airliners, about
30,000 feet, and being inside an aluminum tude, using a cell phone on
board will likey be pretty ineffective. You can actually get too high
for some land mobile system to work well, since system designers try to
keep signal takeoff angles low.

Source record: 248798

My PRO-43 just died, and I cannot return it as I am not in the US.
Can anyone help me?

When I turn on the radio, I can hear static, but I can't receive anything
on any frequency. I've tried holding a cordless phone right next to it
and I still can't receive anything.

Blown front end?

Is there any way to repair it without sending it back? I'm quite okay
with light soldering work.

thanks

I routinely use a Radio Shak Pro-34 and 2006 (with mods to speed up rate of channels scanned and restore cellular) to scan the local 800 MHz trunked system. I lock out the "buzzing" (data) channel and the scan rate of 30+ cps seems to work okay for me to keep up with the local action. My town has a population of 61,000 and two other (but smaller) towns also use the same system, so I hear all three...and it's easy to follow the action. Unless you're trying to scan something like 20+ channels, the newer (and faster) scan rates should do even better than my setup.

I only know one little trick for the Sportcat, hold WX and LO while you turn it on, and it will read the voltage left in your battery. If you find any more, or find some mods, PLEASE email me. Thanks in advance.

I want ANY and ALL info on this scanner!

I've got one of these and have had it apart several times to mod it or to replace a keypad or somesuch thing. If you don't mind doing a little soldering, separating the unit into it's component boards only requires de soldering the antenna connections on the top board after the back is removed. Then unplug the two wire harnesses from the board VERY CAREFULLY as they can take the solder connections right off the board if forced, and remove the top board. The second board has one wire connection to the speaker that unplugs (mine is now hardwired because I forced it so be careful) and a few screws. The lower board has several screws to remove. When removing the lower (long) board be very careful with the display, as it is not fastened underneath, and if it comes out it will fall out in several pieces. Putting it back in the right order is not a lot of fun so your best bet is to loosen it from the board and lay it in the case just the way it came.

Why do all this, because hopefully you have a very close friend who has a pro 43 and will let you try your boards in his. that way you can see which board is bad. I know this would be more expensive than component replacement, but it might be the best way to go. Once you determine which board is bad, RS sells by mail order now. If you need any more info or assistance, feel free to email me..

The box inside should be mounted the same as the outside box so they look like a matched set. Mine is with the coax horizontal. If you mounted it incorrectly I believe radio shack has the replacement pads to correctly mount it. If not Grove probably has them.

4539. Radio Shack on-glass mobile scanner antenna?

Hi all,

I have purchased this antenna, and think that I mounted it wrong..Does the coax inside the vehicle go verticle "down" to the bottom of the window then to the scanner or horizontile "to the side, left or right"?? Mine is going verticle and not having good reception.. If mine is mounted wrong.. Is there anything suggested to use to remount it?

Thanks

The PRO2006 was discontinued about a year ago. That's a very good price
for a NEW IN BOX UNIT, since they are very desireable, hard to find, and
even when you can get them new, they're selling for about $350. Can you
provide further support for your information, such as a Grove catalog
number and current price? As I recall, Grove was getting $350 when they
had them.

I haven't had much luck with discones for scanners. All of the "experts" that I have talked to always suggest other alternatives given the discone's fair, rather than excellent, performance across the range of a top-shelf scanner. I'm told that it more suitable for people who want to transmit and receive. I have one, but haven't used it since getting a Scantenna. I've got it mounted in my attic and I have picked up cordless at well over a mile (closer to two,I think).

The PRO-34 is about $80.00 overpriced. A PRO-34 in EXCELLENT condition should sell for about $120.00. You can buy a cell modified pro-43 for $200.00. A pro-43 is a much better radio. All of the other prices are on the reasonable high size. The only exception is the pro-34.

Good answer,NOT, another prime example of an ex-cb'er with a license <g>.
The mobile unit DOES have extended receive capability, even though the
HTs do not (ref. 1996 RS catalog).

Admittedly the original poster should have checked out the radio more
thoroughly before purchase, but the people who replied should check their
facts before posting. It appears that they think they know it all, and
that is good enough for them to go ahead and post it.

.
.
>-Dana

I use my pro-43 as a backup whenever I fly. It's notg as useful as an
aviation band tranceiver (can't transmit), but it is MUCH better than
nothing. Most scanners don't receive the aviation band (about 118MHz
to 135MHz), so check for this before buying.

If you want great scanner listening in the New York City area just wait until October for the 50th Anniversery of the U.N. It should be better than the Pope. I read in the New York Times that 140 heads of state will be there with over 3,000 Secret Service officers protecting them. The Times said that this was the biggest protection operation ever in the history of the Secret Service. In fact they need so many officers that the Treasury Dept. will also have to use officers from their other law enforcement sections such as ATF and even the IRS. (These agents are receiving training now on protection.)

I have had this problem with various pieces of equipment. What it boils down to is usually one of two things. Cheap volume control wearing out or dirty volume control. Solution? Usually it's best to just replace it with the best quality Variable resistor/Potentiometer you can find (Making sure it's the same value). Turning it back and forth usually does solve it temporarily. Using tuner cleaner on modern equipment is usually not a good idea in this case because even though it may solve the problem it will also only be tempoary. This can wear out the control even more and remove any lubrication put in during manufactoring making it rougher to turn. I have the same problem with my PRO-2005 and so far have been to lazy to replace the volume control. I hope this helps some. E-Mail me if you need more assistance.

Can anyone provide info on the simplest way to construct a rooftop scanner antennae, primarily for 800mhz. How does one calculate the element lengths; angles? Do the elements need to be insulated from each other. Must coax cable be used? Thanks, pinky@primenet.com

Hi folks.

I need a schematic for the uniden 590 scanner. This was a pretty popular one so I'm confident that someone can point me in the right direction. My unit seems to have lost it's audio output. I haven't started poking in it yet so if anyone could tell me of a common failure mode with this radio I'm sure it could save me some time.

Thank's!

Andy

Hello, I own one of these beasts. It works quite nicely. It scambles the signal between the base and the handset. This prevents scanners from listening to you. I think it still operates on standard phone channels so you might still get stomped on. Although, I have never had a problem in my dorm.

4570. Re: New Itinerant Freqs

Newsgroup: rec.radio.scanner
Date: 1995-09-24 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <443033$o05@hopper.acm.org>
Source record: 248636

> OK, I thought I knew all the itinerant freqs ...
Actually, only three of the 'dot' frequencies (151.625, 464.500 & 464.550) are designated "itinerant". The rest are either GMRS or limited to 2 watts (except 151.955, which doesn't seem to have any limits ?).
> ... are there more itinerant freqs?
The itinerant designation also includes 27.49, 35.04, 43.04, 151.505, 158.400, 469.500 and 469.550.
> ... hearing about itinerant "J" or "K" frequencies ...
The "J" and "K" frequencies are two of a large number of low-power interstitial (12.5kHz off the standard) allocations.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 Red Star 467.900
Black 462.625 Blue Star 467.925
Orange 462.675
Brown 464.500
Yellow 464.550

"Dot" stickers are used by the manufacturer or distributer to indicate the frequency of otherwise identical transceivers. They are often found in rental inventories and on construction sites. Note that the 462.xxx frequencies are for GMRS.

Haven't seen a grove catalog in several months. I'm sure they still
have them for sale since they bought a ton of them before ban.

To demand NEW price requires more than "new in the box" claim.
A individual selling to an individual puts a lot of risk on the buyer
(as does buying from "as is" pawn shop). This risk mandates a
substantial reduction in price.

True. When you look at a 900MHz phone, if you want SS it needs to say
spread spectrum, not just 900MHz digital. BTW the spread spectrum phones
are digital.

>For privacy this is probably fine and most of the digital ones I have

Freq hopping is considered real spread spectrum. When you refer you to
true spread spectrum, you are probably thinking of direct sequence
coding. If you think that DS is probably a more desirable SS method, I
would agree. However is a bit more complicated and costly.

>>: I'm a ham operator and also would hope that these might be a
>>: bit more RFI immune that the other cordless phones are. As a ham

>
>I would suspect that the RFI problems would depend more on the
>susceptibility of the electronics in the phone and not the modulation.

SS is practically 100% immune from interference from other narrowband,
even wide band radio operations. Any interference would probably be in
audio circuits - as opposed to narrow band operations where interference

can be introduced any where, like the front end and IFs as well as audio.

I too am interested in an SS phone. I know a couple of people that have them and they think they are great. More privacy and in some cases, 10 times the range.

One thing I am curious about. With the ever growing number of unlicenced spread spectrum devices, I wonder what will start happening to the noise floor in the 902-928 area. I would imaging that every device adds more noise to the spectrum. Since SS devices essentially work "in the noise", I can't help but think that it will eventually effect the useful range of some of these things.

>Have you seen any difficulty? I use a 46/49 phone and a cell phone
>and haven't had any problem other than a little bleeding in from a 2
>meter packet transmitter.

I dont really have a problem with my amateur gear. I have trouble with all of the other phones and devices on 46/49. I keep the base station downstairs. When I bring the handset upstairs, it is very hard to find a quiet channel. Being up higher, the handset of course "hears more signals from around town". Bringing the base station upstairs causes it to hear all of the interfering signals as well and effects my calls no matter where in the house I have the handset. I am looking to spread spectrum to eliminate that problem and increase my level of privacy.

The FCC does not want people using cell phones from a plane because of the tremendous range you obtain being in a plane. Since cell phones are line of sight, imagine how many different cells you could hit. Of course, as with most technical challenges, the real reason is that the airlines (and GTE) have lobbied to keep cells out of planes because then you would not use the airphone for $2.00 per minute. As usual, marketing supercedes technology!

Pre-amp? What pre-amp? :)

I also wonder if this freq. counter can be "mod" to scan from 1hz instead of 1mhz to 1.3Ghz. Perhaps theoridically impossible but technically possible. :)

Scan*Star for Windows (or Windows 95) or Scan*Star Commercial Edition (DOS).
Scan*Star is one of the few programs that can actually drive the 535 at full
speed. Scan*Star for Windows is the ONLY Windows program that can.

Scan*Star is a high-end scanning software product with advanced features that
will complement the speed and performance of the 2035/535.

Download a DEMO from the Signal Intelligence home page at: //www.scanstar.com,
or from the BBS at 1-408-258-6462.

Sam: Do you have a business relationship with the company that you are recommending? If that is so, you should disclose that relationship while you're making this pitch. If not for the sake of courtesy, then for the sake of honesty. If I'm off base making this connection, please accept my apologies.

As for a recommended software, I suggest you also get a demo version of ScanCat Gold from one of the scanner web sites (I believe Javiation has both software programs discussed here; perhaps someone else can suggest a site).

A while back, I did a very informal poll of recommended software and of the 7 replies I received, all 7 suggested ScanCat Gold. No one even mentioned any of the others. Among other benefits, they cited the company's very good technical support, while at the same time noting that none of the other companies offered even remotely comparable support.

I purchased the product to use on my Mac, running it on top of SoftPC. I have been thoroughly satisfied with it; I use it mainly to program and reprogram my AOR8000, thus speed has not been a major interest to me. However, I tried it on my 486 at work, and it ran wonderfully, enough so that I'm in the market for a PC to use at home.

FYI: I am working on a FAQ for scanner software and computer interfacing. It will be several weeks before I get around to finishing it, so that is not likely to be of any help to you. Once you purchase a program, please let me know what you think of it, because your observations will probably be relevant to the FAQ.

>when I get inside ? Loose,missing diode ?
>TIA
>Richard Reider.
Sounds like a diode was moved. The mod to get expand the 800 MHz band
is to remove (or clip) a diode. If that diode is moved to another
location (I forget which one) it will enable 68-88 MHz but eliminates
30-54. Find the mod file at one of the ftp sites (like oak.oakland.edu)
and it will explain this further. I am assuming this is an american
version. I think the UK versions came from RS that way but I believe
they can also be switched to get 30-54 but they are not filtered as good
for reception in that area, just as the US version isn't filtered as good
for reception in the 68-88 area.

Chris, these phones use what is known as "voice inversion". It usualls stops most people with baby monitors or cordless phones from monitoring because your speech becomes "scrambled". However, if someone wanted to monitor, all the would need is a simple module made by Ramsey Electronics that sells for around $40. Another monitoring option is to use a another "secure clear" phone to monitor. With my Panasonic secure clear phone, all I have to do is set the phone to the correct channel with "secure" on and then simply disconnect the power to the base. So it's more security than before, but is not too hard to monitor. Digital 900mhz spread spectrum is the best way to go. They cost a bit more, but have much better range and are much harder to monitor (I haven't figured out how yet).

4591. Law Enforcement Communication Security

Newsgroup: rec.radio.scanner
Date: 1995-09-24 00:00:00 UTC
From: jackmor@iglou.com
Message-ID: <jackmor-2409951520100001@dp2-031.ppp.iglou.com>
Source record: 248720
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Attached is artical from the FBI gopher, this artical is about radio security for law enforcement.

August 1995
Law Enforcement Communication Security
By Laura E. Quarantiello
Ms. Quarantiello, a writer in San Marcos, California, has published several articles on law enforcement radio communication.

On every shift, law enforcement officers don equipment designed to protect them from harm during their tour of duty on the streets. Like a knight's armor, each piece of equipment forms a link of protection that, when complete, affords officers the best possible safety from the dangers they will face.

Under their uniforms they may wear tight-fitting protective vests; on their equipment belts, they carry service weapons and handcuffs. Trained to use these tools, officers hit the streets confident in the protective value of their gear. But the weakest link in the department-issued armor may turn out to be the most innocuous piece of equipment that officers use--the two-way radio.

THE LIFELINE

In the early days of urban policing, a blow on a whistle or the rap of a nightstick on a manhole cover was sufficient to summon assistance or transmit information. Officers basically worked alone, with very little need during their shifts to communicate with others in the department.

Today's police officers, however, work beats in a far different world. Their jobs and safety depend in large part on information exchange--a dispatcher giving details of a call for service or coordination among officers during a search for a suspect. This constant need for information can be fulfilled primarily through a voice link. Thus, the radio serves as an officer's lifeline.

Unfortunately, the radio wave that carries an officer's voice to a dispatcher's headset also radiates out into free air. Anyone with a scanner and a little time can tune in easily to the communications of local, State, and Federal law enforcement agencies. Every conversation can be overheard.

WHO IS LISTENING?

Officers using radios often fail to realize that not everyone who hears them is true blue. Though officers intend police communication for internal, department use only, the radio frequencies used to broadcast them can be tuned in by anyone. A

quick trip to the local electronics store will prove that the general public easily can acquire the equipment to intercept police transmissions.

Civilians who monitor police radio communication are, for the most part, hobbyists. They have an interest in the job itself and in keeping track of what happens in their city. The scanner simply provides entertainment. In fact, many hobbyists have become assets to police by calling in tips based on their knowledge of current police activities.

Hobbyists and their scanners do not concern law enforcement. What does concern the police is the increasing number of criminals who use scanners.

A scanner properly programmed with law enforcement frequencies can furnish criminals with a steady stream of information about police activities, including advance notice of everything from routine patrols to drug raids and warrant services. This legal eavesdropping compromises officer safety.

MYTHS AND ILLUSIONS

Officers who believe that their radio conversations cannot be intercepted by others outside of the department live with a delusion. Dependence on the radio link has bred complacency and generated several myths about radio security.

Officers often believe that with so many frequencies in use by their department, the chances must be small that a criminal will be listening to the right one at the right time. In fact, the chances are very good. With today's scanners capable of continuously searching hundreds of channels in seconds, even departments that use many different frequencies are not immune.

Officers believe that using codes and abbreviations prevents civilians from knowing what officers are talking about most of the time, right? Wrong. Commercial outlets routinely make police codes available. With a little listening and some common sense, most abbreviations can be deciphered. While number codes and abbreviations allow for clarity and brevity over the radio, they in no way ensure transmission security.

The biggest myth among police departments might be that 800 MHz (megahertz) radio systems make it impossible for police communication to be overheard. Manufacturers tout 800 MHz trunked systems as scanner-proof, and news agencies have reported that the advent of these systems destroys the ability of outsiders to listen. Nothing could be further from the truth. Trunked radio systems provide a bit of a challenge to monitor, but they also supply many pluses to listeners. With these systems, tactical and car-to-car communications, as well as the transmissions of detectives, now are broadcast over repeaters (devices that amplify and resend radio signals), which extend broadcast range. Even undercover details can be heard clearly.

Officers hold another common misbelief that most conversations over the radio are routine and disclose nothing that a criminal could use to put them in danger. It does not take a full-scale

discussion to compromise officer safety. Just a few words, a seemingly minor detail, or a dropped name can be enough. An officer once innocently asked another, "207 David, 356 Adam. I am on the south side. Where are you?" "Second and Grand," responded the officer, continuing, "I am headed to Madison for a special detail."

Two things are wrong with this 5-second exchange. First, a criminal familiar with local police call signs would recognize that 207 David is the radio call of a detective unit. Second, the detective revealed his destination. The criminals listening in at the drug house on Madison would be packing by now, or loading their weapons.

PRECAUTIONS

Budget cuts and the high cost of equipping police officers often preclude the purchase and use of sophisticated scramblers and other forms of voice protection. In the end, the least expensive and most effective means of employing communication security lies in officers' watching their words. For this reason, officers should take the following precautions when transmitting over the radio.

Stick to the Necessities

The radio is not a telephone and should not be used for casual conversations. Officers should not convey personal or sensitive information over the radio.

Avoid Details That Can Be Communicated Later

Unless the information is urgent to current operations, it can wait. Officers should remember that everything they say can be heard, and they should always question whether they must communicate by radio immediately or if they can talk to the person later.

Use Typed Messages or Face-to-Face Meetings

Mobile Data Terminals (MDTs) provide some security by reducing conversations to typed messages relayed from computer to computer. Though MDT communication can be recorded and stored by the department, outsiders so far cannot decode the transmissions. If at all in doubt, officers should meet in person to exchange information.

Avoid Officer Names

Officers often approach conversations on tactical or car-to-car frequencies casually and use personal names instead of call signs. A wise criminal will learn to associate names with voices and then with call signs, which can endanger officers later when the criminal identifies special operations by the officers involved.

Avoid Unique Call Signs

Distinctive call signs alert criminals to the type of operations being conducted by the department. Departments should try to avoid special number or letter combinations that might tip off listeners to officers' whereabouts or activities.

Do Not Disclose Locations During Undercover Operations

Although officers might find it cumbersome to refer to "the location north of the main drag" or to use other verbal disguises, such tactics will help keep eavesdropping criminals off guard. All movements should be outlined in preliminary briefings and mapped out prior to the operation so as to reduce the need for radio exchanges.

Do Not Coordinate Special Operations Over the Air

The details of drug raids, warrant services, and other operations always should be coordinated during briefings. Once on the road to the location, radio chatter should be kept to an absolute minimum. All too often, listeners have heard sensitive details, such as the physical positioning of officers during tactical operations, that could place officers' lives in danger.

Use Low-Power Communications

If at all possible, officers should use simplex, low-power communications during undercover details and when transmitting from car to car. Sometimes called "talkaround," these channels do not use the system's repeater and, therefore, are harder to hear.

Use Out-of-Band Frequencies

Listeners know the police radio service bands and scan them diligently, so even communication on a supposedly unknown channel can be found if the channel falls within the range of police wavelengths. Departments should try low-power communications on bands away from the norm. Federal Communications Commission rules1 allow police agencies to operate low-power radios on almost any public safety frequency, provided the transmissions cause no harmful interference.

Avoid Using Cellular Phones for Sensitive Conversations

Officers often attempt to avoid the radio by using cellular mobile telephones. These phones operate in the 869-894 MHz band, and their transmissions can be picked up by most moderately priced scanners. Recent legislation2 makes the manufacture and importation of cellular-capable scanners illegal, but owning such a scanner remains legal.

Officers should make all phone calls from wire-connected telephones. If that is not possible, officers should avoid parking in one spot while using a cellular phone. Driving around takes ad-vantage of frequent handoffs of the call from cell site to cell site, thereby causing listeners to lose the signal.

Do Not Rely on 800 MHz or Anti-scanner Tones for Protection

As mentioned previously, new 800 MHz trunked radio systems do not provide secure transmissions. In fact, they can be overheard easily. Some companies market their systems with anti-scanner tones intended to delay scanning radios and cause them to miss communications. However, users can defeat these tones by making internal modifications to the scanner.

CONCLUSION

The two-way radio has become so much a part of the daily routine that, unlike a weapon, officers largely ignore its potential for harm. Criminals, unfortunately, have realized the benefit of

listening to police communications and often use the information gained to avoid discovery and arrest.

Officers' lives might be jeopardized when criminals intercept transmissions and learn of police movements and activities. Therefore, they always should guard what they say over unprotected radio frequencies, remembering that officer safety begins with a good coat of armor.

Endnotes

1 FCC Rules and Regulations 90.19(g)(3) allows law enforcement agencies to use any Part B public safety frequency between 40 and 952 MHz for surveillance and stakeouts, provided the power output does not exceed 2 watts. Prior approval is required for use of any Part B public safety non-police frequency, such as those designated for fire or highway maintenance.

2 The Telephone Disclosure and Dispute Resolution Act of 1992 made it illegal (as of April 26, 1994) to manufacture in the United States, and/or export to the United States, scanning receivers or frequency converters that are designed or can be readily altered to receive cellular telephone frequencies.

Does anyone know anything much about a Trident TR-1200
handheld scanner? I recently bought one at a fairly decent price(I
think). .5 thru 1300 MHz, AM/FM/FM wide, No freq skips, etc.
Seems like a pretty good scanner, but not terribly sensitive. I was
told it is basically a relabelled AOR-1000; is this true?
Any additional info re possible mods, good antennas, etc. would be
appreciated.

Thanks; Phil T.

>but not exactly the same.

For test mode, hold down L/O + 2 + 9 simultaneously while turning on the unit ... to get out of test mode, try 2 + 9 + any other key. One warning: all your preset freqs will be wiped.

> Also are there any mods for cellular restoration?

> I had it apart and it looks like there are two surface mount
>pads that are open next to the CPU and two chip type parts
>that could be moved. Any body know about this?

There is no mod I know of that will restore the cell freqs, but it is widely known that most, if not all, can be found from 894-915 (give or take) thanks to imaging.

Hi All. Could someone or anyone help me shed some light on a couple of scanners I bought? Radio Shack had a sale (Canada) and I bought the Pro 43 and 46 (last day of the sale) . I've been playing with both and this is what I've determined.

Pro 46.
Date Code 10A4. Made by Netcom (Uniden). Keyboard mod to invoke 800mhz test freq on channel 43 works. Doesn't allow me to continuously search a specific cellular band (gives error msg.) Images cellular in the 897-916 Mhz band. (Because it's a dual conversion someone on the net explained.)

Has a larger display and the light toggles on/off. Also has a nice metal belt clip. Seems to be not as chirpy as the Pro 43. Only has 4 batteries.
It appears to be more ruggedly built than the pro43. Has larger buttons, bigger, more pronounced case. Internally, has only 2 main circuit boards.
And a larger speaker than the pro 43

Pro 43
Date code 10A4.
Diode Mod works. No imaging in the 897-916 Mhz band. (Triple conversion)
Has a smaller display and the light is momentary. Has a plastic belt clip.

The Audio is the pitts. there is a constant high pitched squeal when a freq. is actively being monitored. ie. very, very trebly. The pro 46 doesn't have this problem and seems a bit bassy. Also, the hyper scan is nice, but skips some of the active but scratchy freqs. Has 6 batteries.
Has a smaller case than the pro 46 and seems more cheaply made. Internally it has 3 circuit boards.

And, Rat-Shack didn't give me a manual. But it's in the
store (so they said today) :(

They said I could return the one I decided not to keep, but both are good units..... And I have 30 days to decide. My question is fellow netters and scanner buffs is: which one do I keep? Or, should I send them both back and get a Pro 2006 (clearing them out for I think $350??) I like the portability, but I definitely want something now. Cellular monitoring is a blast... And next week I'm going to try out a list of Commercial freqs. BTW, does anybody have that 845K file of Ontario freqs?

Please help out this scanner newbie. (Me) I seem to be at such a loss.....
Thanks in advance!!!

I have installed the S-Meter mod (using analog meter) and I noticed a problem... If I am mobile with the radio the needle moves around so much that it is all but unuseable... Can someone explain how to 'dampen' the meter movement? I assume it is something like a capacitor across the meter or something..

Thanks!

>Seems like a pretty good scanner, but not terribly sensitive. I was
>told it is basically a relabelled AOR-1000; is this true?

It **IS** an AR-1000.

Handheld scanners manufactured by Nissei Electronics are sold under
several brand names, depending on country imported to, and distributor.

AOR (and their licensed distributors) sell this model as the AR1000.
Some other companies (ACE, Nevada, etc) sell it as the Trident TR-1200.

Also in UK, some Nissei scanners are sold under the Camnis brand name.
Some AOR handhelds (e.g. the AR8000) have no Trident equivalent because
they are not manufactured by the same company.

>Any additional info re possible mods, good antennas, etc. would be
>appreciated.

Try the Radio Shaft center-loaded telescopic whip, the Austin Condor, or
the GRE all-band (Radio Shaft PRO-34 replacement) duckies.

If everyone understood the concept of the Scout there would be a lot less disapointment with it.

If your ambient RF noise floor is high (urban areas) then the 10-20dB target signal will have to be significant. I have achieved distances greater than 1000 feet from the source, and yes, early I too first believed my Scout was deaf. I also had the opportunity to test my Scout in a skiff room (certified RF 'quiet' room), it performs as specified.

The best bet is to use short, resonant narrow band antennas for selected target freq ranges, or take the

4627. Looking for Ham radio mods

Newsgroup: rec.radio.scanner
Date: 1995-09-25 00:00:00 UTC
From: arenek@cortez.its.rpi.edu
Message-ID: <4455b2$703@usenet.rpi.edu>
Source record: 248654

Hi.
I know that most of the mods posted/requested here are to unlock scanners
to get cell freqs or other scanner mods.
But, a friend of mine has the following radios that he's looking for mods to:
Icom: IC-736
Kenwood: TM-642A

The Icom is a HF Xcvr with 50 Mhz, similar to the IC-738, but that 738 has no
VHF. He's looking for a Xmit unlock for VHF.
The kenwood is also looking for a xmit unlock.
Please direct me to any sites with mod info, and any other (more appropriate)
newsgroups that this should be posted to.
If you want to talk to the radio owner himself, mail miked616@aol.com
But, I'd like the mods myself for my "archives" :>
Thanks for any help!

This might just be a stab in the dark, but I'll try. I own a 91 Acura Legend. In my rear window, towards the top is a nice little maze of wire run in the glass. It is similar to the defoger, but not connected. I am assuming this is the AM portion of my factory diversity antenna system. I have replaced my factory stereo and I'm no longer using this portion of the antenna. My question is this: How good of a scanner antenna would this be? Would it work at all? I'm not an EE, nor do I have any experience with building or designing antennas, so please no flames. Just thought it might be worth a try.

Jeremy

I should ask the same question of you, but I wont. I think you're off base
worrying about how others will percieve these messages. No one is forced to
buy anything, they try out the demo versions of the various software packages
and buy what they like.

>As for a recommended software, I suggest you also get a demo
version of>ScanCat Gold from one of the scanner web sites (I believe Javiation

>mentioned any of the others. Among other benefits, they cited the
>company's very good technical support, while at the same time noting that
>none of the other companies offered even remotely comparable support.

Both Computer Aided Technologies and Signal Intelligence have excellent
support and reputations. I could cite informal polls that support my view as
well. The fact is that SS & SC are both market leaders, SCANCAT takes the low
road and Scan*Star the high end. Hence the differences in price, performance
and features.

>I purchased the product to use on my Mac, running it
on top of SoftPC. I>have been thoroughly satisfied with it; I use it mainly to
program and>reprogram my AOR8000, thus speed has not been a major interest to
me.>However, I tried it on my 486 at work, and it ran wonderfully, enough so

Michael, how will people accept your FAQ when you so clearly demonstrate a bias towards one product? So much so that you can't stand to hear people talk about a competitor???

Hi Andy!

To computer control the PRO 2006, you would be well advised to check
out the HB232 interface from:

Commtronics Engeneering
Po Box 262478
San Diego, Ca
92196

Electronic address:
Compuserve74107,1176
FidoNet 1:202/731
Email bcheek@cts.com
BBS/FAX 1-(619) 578-9247

A quick overview of the HB232:

Avalable as kit or prebuilt unit, for internal or external
installation. External installation is preferable for flexability,
internal for ease of portable use.

Capabilities;
Will program the radio with a full set of 400 channels in about 7-8
mins.
Will autolog scanner operation in all modes, automatically logging
channel, frequency, mode, time, length and with a simple additional
curcuit, signal strength.

Can be programmed with split frequency information for automatic
awitching.

Example:
Scanning mobile frequencies in the UHF band, the unit will switch to the output channel when a mobile is receved. Great for monitoring local units in a larger area without All of the traffic coming through.

Scanning the mobile channels in a split frequency system, the unit will switch to the base frequency for the reply.

Scanning a Cellular system mobile frequency, the unit will switch to the appropriate tower frequency when a mobile signal is detected, monitor till the unit changes site and relock (assuming near proximity) for the new cell site. (no it won't track cell calls per se)

In a recent experiment, I programmed the rig to monitor a channel, and change antenna polarity once each min, logging signal strength twice in each orientation. Antenna polarity was mechannically changed by the interface through a programmable switch controlled by either the keyboard or in this case by a 'script' (short 'Basic" type program) telling the main program what I wanted done and when to do it. There are 4 of these switches all programmable by the user and also keyboard activated.

I run 4 PRO 2006's, and 2 PRO 43's all contolled and or programmed by the interface. In the case of the PRO43, the unit can only autoprogram the radio, with none of the broader control ability avalable to users of the PRO 2004/5/6 units.

The unit's installation does require some work within the radio, but it is a simple task for most. One does need to be familiar with goos soldering techneques and the ability to read and follow directions. The instructions for this unit are excellent. Several drawings and photos provide more than sufficient information for successfull installation. Also online help is avalable from the source at the BBS listed above, as well as through online addresses noted.

The unit is capable of much greate abilities than I have detaled here, but this gives some idea of it's application to your service.

Another unit the OS456 from Optoelectronics. is able to operate the radio through the computer, providing logging and CTCSS tone detection/logging BUT is Incapable of programming frequencies into the radio.

October Editoral from U.S. Scanner News
by R.L. Gehri

Larry Gass of Tulsa, OK was recently convicted in United States District Court for the Northern District of Oklahoma for listening to the Tulsa Police Department's 800 MHz trunked system. Larry owns a local Security Patrol company and a helicopter company which rents helicopters to some of the local media.
The indictment handed down by the grand jury states that "The City of Tulsa did not authorize, and did not desire to have the tactical radio communications of the Tulsa Police Department intercepted and listened to by the public and the media. The city of Tulsa did by written agreement, authorize specific media businesses to intercept and listen to only the patrol channels of the Tulsa Police Department, Channels A, D and G, but none other."
First Assistant U.S. Attorney Scott Woodward pursued the case as a violation of Section 705 of the Communications Act of 1934 (Title 47, United States Code, Section 605(e)(4) and 605(a)). Mr. Woodward stated that this case depended on a strict interpretation of the law, more so than any he had prosecuted in the past.
To understand how the Communications Act was applied, one must first read the sections that were applied here.

47 USC Sec. 605
(a) Practices prohibited
Except as authorized by Chapter 119, Title 18, no person receiving, assisting in receiving, transmitting, or assisting in transmitting, any interstate or foreign communication by wire or radio shall divulge or publish the existence, contents, substance, purport, effect, or meaning thereof, except through authorized channels of transmission or reception, (1) to any person other than the addressee, his agent, or attorney, (2) to a person employed or authorized to forward such communication to its destination, (3) to proper accounting or distributing officers of the various communicating centers over which the communication may be passed, (4) to the master of a ship under whom he is serving, (5) in response to a subpoena issued by a court of competent jurisdiction, or (6) on demand of other lawful authority. No person not being authorized by the sender shall intercept any radio communication and divulge or publish the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person. No person not being entitled thereto shall receive or assist in receiving any interstate or foreign communication by radio and use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto. No person having received any intercepted radio communication or having become acquainted with the contents, substance,

purport, effect, or meaning of such communication (or any part thereof) knowing that such communication was intercepted, shall divulge or publish the existence, contents, substance, purport, effect, or meaning of such communication (or any part thereof) or use such communication (or any information therein contained) for his own benefit or for the benefit of another not entitled thereto. This section shall not apply to the receiving, divulging, publishing, or utilizing the contents of any radio communication which is transmitted by any station for the use of the general public, which relates to ships, aircraft, vehicles, or persons in distress, or which is transmitted by an amateur radio station operator or by a citizens band radio operator.

Section 605(e)(4)
Any person who manufactures, assembles, modifies, imports, exports, sells, or distributes any electronic, mechanical, or other device or equipment, knowing or having reason to know that the device or equipment is primarily of assistance in the unauthorized decryption of satellite cable programming, or is intended for any other activity prohibited by subsection (a) of this section, shall be fined not more than $500,000 for each violation, or imprisoned for not more than 5 years for each violation, or both. For purposes of all penalties and remedies established for violations of this paragraph, the prohibited activity established herein as it applies to each such device shall be deemed a separate violation.

I'm sorry if all of that seems confusing, but that's why the lawyers go to school for so long. Let's see if we can simplify it somewhat. First, one thing that hasn't been mentioned as of yet is that the offense involved two-way radios made by Motorola and Standard Communications, not scanners. I don't see where that makes any difference, but the court seemed to. A press release by the City of Tulsa, Radio Service Division, explains their side of this case:

CITY OF TULSA VS. GASS AND ASTACIO
TULSA, OK -- On July 28, 1995, a federal jury in Tulsa, OK convicted Larry Nathan Gass on all counts charged of illegally modifying and selling two-way radios capable of intercepting the communications of the City of Tulsa.

In April 1995, a grand jury returned a 27-count indictment against Gass, 50, and Jon David Astacio, 42. Both were charged under 18 USC Section 371 Conspiracy, 47 USC Subsection 605(e)4 and 605(a), Sale or Modification of a Device Intended for Unauthorized Interception and Publication of Radio Communications, and 18 USC Section 2, Causing a Criminal Act.

The essence of these statutes is that it is illegal for a person, if not authorized by the sender, to intercept any radio communications and then divulge the existence, contents, substance, purport, effect or meaning of such intercepted communication to any person. Court rulings in related cases hold that by listening to such a device one has divulged the contents of the conversation "to yourself," fulfilling that element of the crime. Other elements of the statute include modifying or selling a

device that accomplishes the above.

The indictment alleged that Gass and Astacio, acting both in conspiracy and individually, violated Federal law by modifying and selling Motorola and Standard brand two-way radios capable of accessing the Motorola trunking radio system operated by the City of Tulsa. The modification were performed with proprietary and copyrighted software not distributed to the public.

Under an agreement with Federal prosecutors, Astacio, now of New York, pled guilty to three felony charges and testified at Gass' trial.

Astacio's sentencing is set for later this month, and Gass is to appear before U.S. District Court Senior Judge H. Dale Cook for sentencing on October 18, 1995. He faces up to 85 years in prison and up to $4.25 million in fines.
The convictions culminated a 16-month investigation by the Tulsa Police Department's Internal Affairs Division. Evidence was recovered during an August 1994 search warrant served at the offices of Tulsa Security Patrol and Action Helicopter Services, both owned by Gass. Other evidence was recovered by subpoena and search warrant from Gass' customers, which included major media outlets in Tulsa.

This ground-breaking case was the first use of these statutes in a case involving a trunking radio system. First Assistant U.S. Attorney Scott Woodward let [sic] the prosecution team and stated that he spent an "enormous amount of time briefing the case" and asked attorneys in three different sections of the U.S. Department of Justice to research various issues before deciding to proceed against Gass.

During the trial, Gass' attorneys tried many times to introduce evidence that simple scanners were capable of intercepting, at least partially, the communications of a trunking radio system. Most of these attempts were rebuffed by the judge, as no scanners were involved in the case, only trunking radios.

A scanner, of course, is programmed with frequency numbers, while a trunking radio must be programmed with confidential alphanumeric codes not available to the public through legal means.

Following the verdicts, Gass stated to the Tulsa World reporter Julie DelCour, "Whatever it takes and as long as it takes, this definitely will be appealed because we think the people have a right to know what their police are doing."

Internal Affairs Sgt. Rod Hummel states, "The Tulsa Police Department has always been open with the media. But we have made it clear to them what channels we allow them real-time access. We restrict their access to certain talk groups for the safety of our officers and so that certain operations are not disrupted while in progress.

"Media members testified in court that they knew that the City of Tulsa and the Police Department made it clear what conversations could be

monitored. They also testified their stations could not be competitive with scanners if their competitors had cloned, trunking radios.

I find it interesting that Mr. Gass' defense team kept trying to introduce evidence that had to do with scanners. This case has never been about scanners and none were seized or introduced as evidence. If scanners are so effective, why would Gass' customers pay over $1 000 per cloned radio to hear what they claim could be monitored with a $100 scanner?

"Undisputed testimony was given at trial that Mr. Gauss [sic] attempted to place an agent of his into the City's Electronic Maintenance Facility, posing as an alarm technician, in an attempt to gain the proprietary codes needed to program radios.

"I believe Mr. Gass would be upset - and rightfully so - if someone obtained the codes for a cellular phone that he uses and then programmed those codes into a device that would allow full access to his conversations. That wouldn't be right, and would be a breach of his privacy. Evidently Mr. Gass things [sic] that if you work for the government you have no right of privacy."

The problem I am having with this is that since there is now case law on the books that makes it illegal to listen to or reprogram a trunked radio to follow a talk group, the next prosecutor will use this to make his case about someone listening to a trunking system on a scanner. This may seem like a big step, but one of the cases that the prosecutor used to set his case was the one that HBO won in 1984, dealing with the reception of satellite communications.
The Communications Act of 1934 was written with as much forethought as possible. The meaning of the Privacy provision has always been that it is alright to listen, but not to reveal what you hear. Little by little, the courts have been chipping away at it until it has no meaning whatsoever. I can only hope that Mr. Glass will take this case to as high a court as he can until it is overruled. That is the only way we will be able to retain our right to listen to our public officials, on systems purchased with public money. Remember, a right can't be taken away and a police department operating in secret is a department that could become more than a police department.

If you send us a copy of your personal frequency list, we will give you a FREE three month subscription to U.S. Scanner News plus a copy of the pages for your county from the new Hawaii book when it's done.

Send your list by E-mail to ussn@pacifier.com or mail it to: U.S. Scanner Publications, P.O. Box 14923, Portland OR 97214.

4645. Mobile Scanner Antenna - Which is best?

Newsgroup: rec.radio.scanner
Date: 1995-09-25 00:00:00 UTC
From: dave.hultberg@paonline.com
Message-ID: <446ajq$ifv@news.fmso.navy.mil>
Source record: 248672

There is current thread on this newsgroup debating the usefullness of glass mount and magnetic mount scanner antennas. Unfortunately more heat than light is being generated in the debate. I am not an antenna expert, but I have used mobile VHF/UHF antennas to receive public safety frequencies longer than scanners have existed. All antennas are a compromise, but mobile antennas are even more of a compromise than fixed ones. No antenna is perfect for all uses at all frequencies. For example, no one antenna can meet my ideal requirements for a mobile antenna for my PRO2004 - perfect omnidirectional pattern and at least unity gain from 25 MHz to 1.3 GHz. This is just the electrical specification, I haven't even talked about mounting options.

The best antenna on a typical sedan for a given frequency would be a 1/4 wave or 5/8 wave whip permanently mounted in the exact center of the roof. The drawback to that antenna is that it works best only on one frequency and requires cutting a hole in the roof of the car. There isn't much we can do about the frequency response over the wide range of frequencies covered by the typical scanner. If you are only interested in public safety communications there are antennas designed to optimize coverage on those frequencies, but in payment for that you have to sacrifice frequency response outside the design of the antenna.

That brings us to mounting location and type of antenna mount. As i said, to get the best omnidirectional antenna pattern, the antenna should be mounted on the center of the roof. The next best location is trunk mounted on the centerline of the car. Off center mounting locations distort the antenna pattern making it directional. The worst place to mount an antenna is on the bumper because the metal body of the car parallel to the antenna distorts the pattern.

As for mounting methods, most of us choose not to cut holes in our cars so magnetic mount, trunk mount, gutter mount and glass mount antennas. The magnetic mount is the most flexible, since you just stick it where you want it and route the cable through one of the car's windows or doors. It is easy to relocate or remove temporarily for car washes or parking in areas where you don't want to attract attention to the scanner(s) in your car. Drawbacks include damage to the paint on the car over time, kinks in the cable where it enters the car will eventually cause antenna degradation and during rainstorms water can find its way into your car by following the cable. Trunk mounts are almost omnidirectional in pattern and won't scratch your paint, but water can follow the cable into your trunk and the cable will eventually fail due to chaffing from the trunk being opened and closed. Gutter mounts are good for quick installation and removal, but they have a distorted antenna pattern and the same problem with rain entering the car as a mag mount. If you have a sedan like I do, a glass mounted antenna centered at the top of the rear window will have an almost omnidirectional pattern and will avoid the problem

of routing the cable through a door, window or the trunk. The major drawback that has been the subject of discussion on this newsgroup is the signal loss through the glass. The antenna mount is actually a big capacitor with the window glass acting as a dielectric. The frequency loss due to impedance is determined by the frequency and capacitance. The capacitance is dependent on the area of the plates, gap between the plates and a dielectric constant. The impedance and therefore signal loss is inversely proportional to both the frequency and the capacitance. Therefore, the signal loss decreases as the frequency of interest increases. If you are interested mainly in low band frequencies the signal loss may be more than you can live with. On the other hand, if you are interested in UHF and above, the signal loss may well be small enough to be acceptable.

Each individual must decide for himself/herself which factors are the most important. In my case, the purchase of a new car and the complaints of my wife caused me to switch from mag mount to class mount. So far the signal loss hasn't been noticable to me, despite the fact that my county dispatches both police and fire in the 45-46 MHz range. YMMV

>be one of these six freqs (I believe it was 6, - cells shaped like
>hexagons). Does anyone have any information on this?

You're assuming that each cell has one frequency, but each cell can
have DOZENS of frequencies assigned to it and they usually do. To
complicate matters, cells can be broken into directional sectors --
for instance 3 sectors covering 120 degrees each or 6 sectors covering
60 degrees each. Each of these sectors can have dozens of frequenies
assigned to it. And each sector serves a different azimuth, so you'd
have to know which sector the mobile was travelling into EVEN if you
knew which cell, etc. etc.

You'd have to get frequency plans from the actual service provider,
which I imagine are propietary -- furthermore, service providers often
re-tune their systems -- i.e, they change which frequencies are
assigned to each cell. So even if you managed to get the most
up-to-date frequency assignments, they may not be valid for long.

My guess is that the S stands for Signal, or signal strength. The
S-meter, then, gives a reading of the power level of the signal that
the Pro2006 is receiving.

>coffee or OJ cans???

The kit works quite well--if you apply the usual post-Ramsey improvements and upgrades. That means getting rid of the convenient plugs and jacks on the cable which connects the RF unit with the display unit. It also means going in and bypassing the power and grounds on all of the TTL parts in the display unit. Forget using a low impedance earphone on the unit--I have to use a high impedance crystal earphone. A low-impedance earphone causes some sort of feedback in the display unit that sounds like someone with a bad case of intestinal gas...

I originally assembled the kit here at work during the lunch hours, using our nice fine-tipped soldering iron for SMT around here. I carefully cleaned all the flux off after building each board, leaving a really nice shiny assembly. Patience and neatness pay off in this project.

They are dead-serious about being careful about horn constructions. I ended up using a butane hobby torch to get a nice smooth solder seam holding the cans together. I also got some small brass angle stock to make a nice seal between the RF unit and the horn assembly. Once I tightened up the units to make them as RF-tight as possible, the unit radiated a lot more efficiently.

Overall, I can pick up objects about 100 yards away--depending on their size. Ramsey's 1/4 mile claim is viable--given that it's a semi-truck and you have a very quiet power supply, like a battery pack. I picked up a musical tuning fork to calibrate the unit, plus I've put the whole thing in our GTEM cell here at work. The radar unit runs at 2.54 GHz, with a slow drift downwards as it warms up.

Fun for clocking folks along the parkway around here while I'm waiting for my wife's bus to arrive. Beats the boredom...

)
)Most cell sites use channels grouped in sets. I have a list of all the
)sets but I can't find it - I don't remember how many channels are in a
)set. I think it's ten. The number of channels or channel sets used on a
)specific site (to serve a specific area) is based on the amount of
)traffic the site handles - not on the population. It is not unbelievable
)that there would only be a couple of sets serving a small area of 10,000
)people.
)
)There are normally two carriers serving any market. One operating the
)"A" or nonwireline system. The other carrier running the "B" or wireline
)system. Each system has over 400 available channels. They are grouped
)in sets to make system design and "tuning" easier to manage.

Ok, here goes:

The transmit frequencies are 824-849 MHz (handset to site), the receive frequencies are 869-894 MHz (site to handset), divided into 30 KHz wide segments. This gives 832 FM channels. This is divided into two parts for the two carriers (this is the company, not to be confused with the signal carrier, FM), giving 416 channels per carrier.

Each carrier uses 17 channels for timing and control, yielding 399 channels for voice transmission. The sites are arranged in an hexagonal pattern, with each site adjacent to and contiguous with six others. So the 399 must be divided by 7, giving a grand total of 57 channels maximum available per site.

This is all standard AMPS, that is pre TDMA, CDMA, and CDPD. CDMA may be coming next year, though. It is currently in test.

Not quite correct, Dave. There are also dielectric losses such as
absorption, remanence, piezoelectric heating, self resonance, and
others. Wanna bet that automotive window glass was not optimized for
use as a capacitor dielectric at (name favorite frequency)?

The losses of the "capacitor" are not at all obvious, and are best
determined on an experimental basis. I would not guess that the losses
decrease monotonically with frequency (or actually monotonically at
all).

4654. Re: Opto Scout Problem

Newsgroup: rec.radio.scanner
Date: 1995-09-26 00:00:00 UTC
From: timj@solo.pipex.co.za
Message-ID: <4492ve$au0@baloo.pipex-sa.net>
Source record: 248531

I have seen a number of messages posted here by people having problems with Scout sensitivity.

I have no connection whatsoever with Optoelectronics other than that I have purchased several of their products over the last few years.

As someone involved with electronics design and R&D I understand how the Scout works from a technical point of view and therefore what some of its limitations are.

I believe that if this was easier to understand it would make the Scout's operation a litlle less mysterious.

At the risk of being too simplistic, let me use an analogy:

Imagine standing in a large hall with a thousand other people at some or other noisy function where everyone is jovial and talking to those around them.

What chance do you have of being able to hear the detail of a conversation taking place in the far corner of the room? Zilch.

Now, empty the room except for yourself and the people in the far corner. Now what? You can hear them clearly, can't you?

They aren't talking any louder than before. You're no closer to them than you were before.

The difference is the ambient noise level. You couldn't hear them because with all the other noise, there voices were, relative to the other voices, too quiet.

The Scout works the same way with radio signals.

Take it into the middle of nowhere and transmit a lone signal from 100 feet away at a low (100mW) power level and the Scout will almost certainly pick it up immediately. Do the same thing near a tall building covered with antennae from paging companies etc and you can forgwet it. The Scout will only detect a signal that is at a higher level than the signal it's picking up from all the paging co's etc.

Very often there are "invisible" sources of signals in a given area that will, in effect, de-sensitise the Scout. By invisible I mean signals originating from sources that you may not immediately be aware of. This could be a nearby cell tower that isn't on a tower but on a rooftop in such a position as to be invisible from where you're at. It could be huge amounts of interference from a computer system in the next room or whatever.

When you take these factors into consideration and plan your Scout usage accordingly, you should find it to be a truly amazing little gadget.

Has anyone written any utility to allow easy downloading of the AR8000 EEPROM to a PC for editing?

Ideally what I want to be able to do is to download the memory banks to PC, sort them, add the 7-character tags etc and then upload back to the AR8000.

I know ScanStar for Windows does this but it's hellishly expensive for my purposes. I was hoping to find a simple memory management program.

MA> at well over a mile (closer to two,I think).

I'm not sure who your "experts" are, but a discone makes an excellent
scanner antenna. As a transmitting antenna, however, it's very limited.
A discone has a relatively flat response from about 100 MHz to about 900
MHz. There are no other antenna designs that can do that, that you will find
on the market. A discone, however, offers no gain.
An antenna like the Scantenna is sometimes called a 'tri-bander' because it
will do well on three bands, instead of over the entire 100-900 spectrum.
This allows it to offer a little gain on those bands, while being really bad
on the missed parts of the spectrum.
Which one to use depends on your situation. In an RF-rich area, like a city,
the discone will probably perform as well as the Scantenna, maybe even
better if your scanner is prone to desence from front end overload. Also, of
course, it will offer reception in frequency bands the Scantenna won't.
In a rural area, the Scantenna may do better, as it will pull in signals the
discone won't, because of it's gain, but only in certain bands.
Picking an antenna is not easy, especially if your needs are broad.
Good luck!

Nope. Dampening the meter movement is a physical thing, not electrical. Most
dampened meters use a liquid in the meter. You have to buy them like that,
you can't do it yourself.

Hummm, good question. Seems I had God's frequency directory around here
somewhere.....

Honestly, check out the city police, county sheriff, and then the Secret
Service. The Pope is considered an important dignitory in the same
class as a president or other country's leader. So you're sure to have
State Department activity as well as Secret Service.

I recently installed a new cpu crystal model ctx050 from Digi-key. The model is 4.91520 mhz. It is a HC-49, 20pf sized crystal and seems to be working fine. It appears to be a full size crystal and not the watch style. Will this improve performance over the ceramic crystal provided and will the size of the crystal hurt the performance of the receiver. Please email me any response and any help will be greatly appreciated. Keith

4668. AR8000 and PC interface

Newsgroup: rec.radio.scanner
Date: 1995-09-26 00:00:00 UTC
From: joelm@eskimo.com
Message-ID: <DFHu2y.GwC@eskimo.com>
Source record: 248591

I recently purchased a used AR8000 with an EDCO AR8000INF interface. Unfortunately, no documentation came with the interface. The interface has a female DB25. I slapped on a DB25/DB9 gender changer and plugged it directly into my laptop's serial port. No luck so far on getting the PC to converse with the AOR (I've tried the EDCO demo app and a couple of terminal emulators, making sure my port settings are correct). The AOR manual pretty much says "see the interface documentation" for more information. Do I need a null modem cable? Does the AOR need to be in a certain mode before I can establish communications? Am I missing something obvious?

Thanks in advance...

>all your preset freqs will be wiped.

Thanks for the note... doesn't do all that much, but it's cool to
see new info out.

One note though... on my unit, the 2+9+<any key> didn't take it out of
test mode... not by pressing it normally or by turning the unit one
while doing it... I didn't hit all the other keys, but tried a few
with the 2/9 combo and by themselves and it didn't do it.

Doing the LO/WX while turning the unit on worked in getting it out of
that mode though.

Thought I'd point this out before (or in case of) someone posting that
they can't get their @#$!# scanner out of test mode.

Keep the pro-43 and return the 46. The pro-43 is a much better scanner.
Also buy a 2006 while you can still get them.

Brian Lee (blee@sentex.net)
wrote:
: Hi All. Could someone or anyone help me shed some light on a couple of
: scanners I bought? Radio Shack had a sale (Canada) and I bought the Pro 43
: and 46 (last day of the sale) . I've been playing with both and this is what
: I've determined.

: Pro 46.
: Date Code 10A4. Made by Netcom (Uniden). Keyboard mod to invoke 800mhz test
: freq on channel 43 works. Doesn't allow me to continuously search a specific
: cellular band (gives error msg.) Images cellular in the 897-916 Mhz band.
: (Because it's a dual conversion someone on the net explained.)

: Has a larger display and the light toggles on/off. Also has a nice metal belt
: clip. Seems to be not as chirpy as the Pro 43. Only has 4 batteries.
: It appears to be more ruggedly built than the pro43. Has larger buttons,
: bigger, more pronounced case. Internally, has only 2 main circuit boards.
: And a larger speaker than the pro 43

: Pro 43
: Date code 10A4.
: Diode Mod works. No imaging in the 897-916 Mhz band. (Triple conversion)
: Has a smaller display and the light is momentary. Has a plastic belt clip.

: The Audio is the pitts. there is a constant high pitched squeal when a freq.
: is actively being monitored. ie. very, very trebly. The pro 46 doesn't have
: this problem and seems a bit bassy. Also, the hyper scan is nice, but skips
: some of the active but scratchy freqs. Has 6 batteries.
: Has a smaller case than the pro 46 and seems more cheaply made. Internally it
: has 3 circuit boards.

: And, Rat-Shack didn't give me a manual. But it's in the
: store (so they said today) :(

: They said I could return the one I decided not to keep, but both are good
: units..... And I have 30 days to decide. My question is fellow netters and
: scanner buffs is: which one do I keep? Or, should I send them both back and
: get a Pro 2006 (clearing them out for I think $350??) I like the portability,
: but I definitely want something now. Cellular monitoring is a blast... And
: next week I'm going to try out a list of Commercial freqs. BTW, does anybody

: have that 845K file of Ontario freqs?

: Please help out this scanner newbie. (Me) I seem to be at such a loss.....
: Thanks in advance!!!

David Craig (craigd@ucs.orst.edu) wrote:
: I have read several posts about the tuning this antenna, and how great
: that is. Could someone post how to tune it? How many sections to
: extend for the different frequency ranges? Thanks in Advance!!
: Dave

Well, I have one of these radios, and I know how maddening it is to lose the
instructions and forget how to "tune" it, so...
25-136 Mhz Extend all nine sections
138-174 extend top 4 sections (not all 5)
220-1296 Mhz (1.296Ghz) between 1-3 lower sections.
For transmitting:
Always extend the section just above the coil. The try to set the antenna for
1/4 wavelength.
2834/freq in Mhz = antenna length in inches.
(applies only between 130-535 Mhz)

Craig Todd Gafah <cgafah@indiana.edu> wrote:

>How long do you think it will be before the whole cellular network goes
>digital? 2 years, 3 years, 5 years?

There already is digital in parts of the country. However, the vast majority is still analog. Analog is tried and true and will be around even as digital takes over -- 10 years? A good analogy is vinyl records slowly being replace by CDs. In that respect, analog may ALWAYS be with us -- especially in rural areas where capacity is NOT a problem. Big cities will go digital first. Rural areas may NEVER go digital -- the current dual-mode phones already allow the two technologies to co-exist (i.e, mobiles can currently hand-off from analog to digital and vice versa in the midst of a single conversation).

Furthermore, one key drive is getting digital up and running on the new PCS (Personal Communications Services) frequencies near 1.8 GHz. In other words, those digital channels won't be encroaching on the analog 800 MHz, like digital 800 MHz -- another reason analog my survive for a while.

Digital technology is new and not without problems. Also, the debate isn't yet over on whether CDMA (Code Division Multiple Access) or TDMA (Time Division Multiple Access) will be the preferred digital technology. Some service providers have already announced the pursuit TDMA, others CDMA. A good analogy here is Beta vs. VHS, though it doesn't have to be one or the other.

It'll be interesting to watch the next couple of years to see how things pan out.

From: NJFM83A@prodigy.com
Message-ID: <4490rb$uji@usenetz1.news.prodigy.com>
Source record: 248602

If the equipment is relatively new, the control is simply dirty & can be safely/effectively cleaned. Use a "TF" type cleaner with the spout provided. Completely cover any electronics that could receive "afterspray" & direct spray into the openning of the control, turning the control quickly as you spray. Of course, this should be performed with the unit unplugged; however, even if the PC board is accidentally sprayed, the "TF" type cleaner evaporates very quickly (within 30 seconds) AND leaves NO RESIDUE. This is not true with "tuner cleaner", which leaves residue. Even if the unit is older, try cleaning 1st. If cleaning is effective for only a week or 2, replace the control. Good luck, Gary, A/V Tech in Baltimore.

Is your neighbor a "little old lady?" If so, she could be using a first-
generation cordless phone. These were sold in the early 80's, and used a
set of frequencies where the handset transmitted on 49Mhz but the base
unit was on 1.7Mhz, just above the AM broadcast band. If you have a
newer AM radio that includes the expanded band, try tuning around 1.7Mhz
and see if you can hear anything.

Anyone know test mode codes or modifications for the Uniden BCT7? Any kind of modifications.. cell, power, extra programming channels..

Thanks,
K. Nelson

I have one of the Secure Clear Moto cordless phones, too. It operates on the 46/49-MHz cordless channels, but the scrambling is the old voice inversion variety. So, if you have a descrambler, you can monitor these phones. If you don't have a descrambler, why not???

I'm a contributor to Monitor America and I saw portions of the book that I helped out with. The information included for just one state was amazing! If you have used Monitor America in the past, be surprised when the new third edition comes out in a few months (it's being wrapped up furiously as you read this). Information for every COUNTY and CITY of consequence will be included in the new edition. Plus all AM/FM stations, too, for those folks like myself who like to travel. Put aside a few bucks because you won't want to be without the third edition of Monitor America. For info on the new edition, send e-mail to ScanMaster@aol.com and feel free to tell the publisher I sent you!

assuming
>that its NOT encrypted, and that there is a standard, why couldn't
uniden or
>some other electronic mfg make DIGITAL SCANNERS???
>ANY IDEAS??? Thanks, Jim.

Well there's no real reason why Uniden or Radio Shack can't make a
dgital scanner. The only catch is that as part of APCO Project 25
which will define a common standard for digital systems is that the
manufacturers must have a licensing agreement with the developers of
this technology. This usually implied a cost involved.

Additionally, the Project 25 standard is a voluntary standard, there
are no guarantees that all equipment suppiers of Public Safety
equipment will comply to this standard. There is considerable
disagreements in the industry between manufacturers over this standard.

Motorola says they will comply but Erricsson says they will not.

This will be quite a problem for scanner manufacturers. Which scheme
will they use?

There is also a feeling among some public safety official regarding
privacy of communications. This was particularly noted during the O.J.
chase last year here in southern California. In fact I've heard that
the pursuit was being played real time in bars!

All we can do is wait and see what happens.

Maybe it's a cell phone. If it is a cordless, keep hitting up the base
stations, it'll show (But do it from Canada where it's legal).

What???

First of all I'll assume that one of the NASA 747s if flying somewhere with one of the shuttles mated to the top, rather than that one of the shuttles itself would be flying in.

Second of all, what the heck is it doing in Salt lake? I know sometimes they have work done in Palmdale CA but it was my understanding that they went back to Florida via Houston.

If you want a scanner that can be modified you got the right one.

Possibilities include:
Cellular reception (assuming no A in the serial #)
increased scan speed
addition of additional 200 memory channels and 10 monitor channels
keypad beep delete
improved audio quality

That's all I remember right now...

I believe the typical lists fow (VHF low) cordless frequencies are for
the base unit which will allow you to hear both sides of the conversation.
I would try searching for the handset frequency. I don't remember off
hand what they are but I think they are all a fixed frequency below
the base freq., like 1MHz below the allocated base freq, or something
like that.

4706. Cleveland switching to DIGITAL trunking

Newsgroup: rec.radio.scanner
Date: 1995-09-26 00:00:00 UTC
From: hglassma@forest.drew.edu
Message-ID: <1995Sep26.232241.125159@forest>
Source record: 248629

Just read a long article that said Cleveland is moving all of its police/fire/ems to a digital trunked system in the near future.

Once this occurs it will be impossible to monitor these freqs with a scanner since this will be a digital trunked system as opposed to the standard analog systems which are possible to monitor.

Is there anyone on this group from that area? I want to know if this has been an issue that has caught the public's eye or if it has mostly gone unnoticed?

I know this isn't what you want to hear, but here goes...
Get a CB. Even a BearTracker only tells you if a LEO is *transmitting* in your area. It does nothing to let you know about the one who's just sitting there without talking to anyone, waiting for *you*.
Also, the BT's do next to nothing for locals, or for departments without extenders.
The CB, on the other hand, will warn you of LEOs sitting and waiting, or moving near you.
Of course, in case you haven't figured it out yet, if you drove a little less enthusiastcally the LEOs wouldn't notice you as much ;-).

C> these devices are illegal. I don't want my equipmen confiscated. Thank
C> you.

In all honesty, a CB will provide better warning than *BOTH* a radar
detector AND a scanner in your car.
With the newer radar guns, by the time you detect the radar, the officer has
your speed. Only with scatter can you hope to beat radar, and the LEOs are
getting smarter, and nailing people from behind a hill, so scatter goes up,
and not into your detector.
A scanner will only let you know if a LEO is talking, not where they are.
A CB, on the other hand, will keep you informed as to the whereabouts *AND*
activities of any LEOs in your immediate area. The truckers keep a close
track of all LEOs, and freely give this info over the CB.
I've been across the US several times on highways, and can tell you from
experience: radar detectors are useless, scanners are nice, but CBs let you
know what's going on as far as where the bears are.

Probably nothing. She may be using a 900 MHz phone with spread spectrum. In
that case, you won't hear a thing, except a slight rise in the noise floor.

BW> replacing the transformer ? Thanks for any advice.

Short of replacing the transformer, not really.
What's happening is this: as AC goes thru a transformer (I know it's DC to DC, but a transformer only works on AC), it makes a magnetic field that pulsates in time to the AC. Some transformers will loosen their fastenings, and the plates will vibrate in time with the magnetic field.
If you are lucky, that transformer will have a set of long bolts holding it together, and you can tighten them. Most don't.
Good luck.

Wait until the news media (radio, television, newspapers, etc.) gets wind
of this...I guarantee this will be brought to the public's attention.

The news departments routinely use scanners to keep up on what's
happening around town. If the city goes to an all-digital, non-
monitorable system, I can guarantee they will make a stink about it!

You will hear exactly the same stuff on an uncensored scanner that you now hear on the images. Most conversations you'll hear both sides, but some you'll only hear one side.

You can get a Pro26UK (uncensored) for around $400 delivered from Javiation (tel: 011-44-1-274-732146). That's a heck of a lot less than $450 plus tax.

If you want the world's newest scanner, Javiation just received the brand new Yupiteru MVT-7200 today (Sept 26)!

>and see if you can hear anything.

Maybe it's a "little old lady - on the cutting edge of technology" and
perhaps is using a spread spectrum. You won't hear a thing.

But I have a question for you. And I will get all kinds of grief for
even asking. I have listened in on cordless phone calls - really just to
see if I could do it (I use my scanner primarily as a ham radio monitor).
The idea of seeing someone talking on their phone, knowing that they are
expecting some level of privacy, and then scanning around to eavesdrop on
thier conversation...doesn't that make you feel sleazy?

When I pick up a phone call on a radio, I might listen for a while. But
then that little voice inside starts talking louder than the scanner
saying, "You know you are a sleazy eavesdropper and this is really none
of your business."

To me, it is the equivalant of taking a pair of binauculars and trying to
look through the neighbor's windows from my house. Sure, they should
shut the drapes if they want privacy, but the idea of going to the effort
of trying to get a look is something I would want to tell everyone on
Usenet about? I'm a peeping tom! I'm a peeping tom!

Anyone have any mods to loosen up the front end of the
BC8500XLT.
Its great to have 500 channels with pl, but they tightened the
front end so much with the new circuitry that you can bearly
hear anyone.
any suggestions would be greatly appreciated.
Jeff

I had to add some resistance in series till mine worked ok. Sorry but
I am not sure of the value right now. Try some different values till
you find one that works. I have noticed mine moves up on noisey
channels even without breaking the squelch.The meter is still
measuring signal even if the squelch isn't broken. You probably have a
lot more noise in the car and need to use more squelch to silence the
radio and get it to scan.

>price, and mail order outfit.
>Please post or email if you can help.
>Thanks in advance...
>==
>Stephen Chu
>AT&T
>Internet : shc@mtgbcs.att.com
>==

Well, Steve, don't worry about comparing VHF/UHF cause GMRS by definition is UHF only. 462MHz thru 467MHz. We use them heavily in REACT.

The best GMRS radio is the cheapest. :) Actually, it depends upon what you are wanting to do with it, and how far away from the repeater you will be running.

If you want cheap and no repeater, Radio Shack sells a piece of @#$# that I wouldn't even take time to bring home. It works for short range, but is crystal controlled and no tones can be installed for repeater usage. You get what you pay for here.

You want PROGRAMMABLE, MULTI-CHANNEL radios only, preferably 6-10 channels, but that depends upon how many repeater freq's you can access in your area. In San Antonio, we have 3 GMRS repeaters operated by the REACT Team, so we need at least 6 channel radios down here. (3 repeater, 3 simplex for same freq's)

H/T's should be at least 4-5 watts. Those 2 watts work good if you are in unobstructed terrain and close to repeater. Otherwise, you need the extra juice.

Maxon makes an affordable 10 channel GMRS H/T called the 210+3 model. First 7 channels are those GMRS Interstitual channels (simplex only). Last 3 channels are programmable for repeater freq's with tone and simplex/duplex splits allowed. You can change the tone encodes from the keypad, so that's a plus. The low wattage is a minus. They were supposed to come out with a 5 watt model and drop in charger, but I haven't seen it yet.

Motorola always is a good bet, but you'll pay for it also.

Mobile radios. You want at least 15 watts or more. You are limited to 50 watts by FCC rules. Again, look for multi-channel programmable. You won't find new radios that are user programmable cause the FCC changed the rules years ago to prevent that. (Too much abuse)

Okay, now here is "not" a recommendation. Many/most Amateur Dual Band and 440 UHF radios can be "fixed" to go up into the GMRS band. I know of many people who happen also to be licensed hams, that are running modified ham radios so they don't have to buy another radio. This option, while highly illegal, is considered to be cheaper than buying commercial radios, and is much more flexible. Remember, I am not recommending that you do this.

Best of luck, and contact me via e-mail if you have any further questions.

My experience has been that when any agency accounces that it's going to make any major change in their communications system, be it going to trunking, or from analog trunking to digital trunking, that "near future" tends to mean "some time in the next ten years."

If they are not already trunking, it's also a strong possibility that some techno-weenie threw that "digital" in there to make it sound impressive; just like Motorola calls their flip phones "Digital Personal Communicators" even though they do not process the audio digitally.

Just my $.02.

I've noticed that the New York City police cars which have these four
antenni in the square configuration also have computer terminals inside.
Most NYPD cars don't have the antenni or the computer terminals, so I'm
pretty sure that the antenni are for the computer link.
Relating to this, the NYPD operates taxis which are undercover cop cars.
Everything looks exactly like a taxi (license plate, etc.). The give-away
is the four antenna in the square configuration and the computer terminal
inside. (The other give-away is the little rotating light they put on the
dash when they pull you over, but but the time you see that it's too late,
you've been caught!) :)

I wouldn't worry about it too much. I've traveled all across the country and never had a problem. If you're ever stopped and asked, just tell 'em it's a ham radio. In fact, if you're really worried, get yourself a ham license. Then you're protected by federal statute and the "lokel yokels" can't touch you.

I have read about this some place, I can not find the article
right now. The jist of the story is some thing like this --
The antenas and terminals are for tracking a device that is put
in wrapped money when a bank is robbed. It might be called RAT.
I live in a town to small for this that is why I do not know
much about it.

Hope this helps.

4744. Scanner Frequency Gaps (Other than Cellular)

Newsgroup: rec.radio.scanner
Date: 1995-09-27 00:00:00 UTC
From: wjcinwdc@aol.com
Message-ID: <44cfe1$f9v@newsbf02.news.aol.com>
Source record: 248567

Earlier today I was looking at Radio Shack's line of portable scanners. It seemed like the frequency coverage of each one was a little bit different. They all covered most of the spectrum, and probably almost everything there is to listen to, but they all had various omisions, and these gaps seemed to be different on every model. The two cellular gaps were, of course, consistent on all models.

Can anyone explain why all scanners don't just simply cover from 30 to 1300 (or whatever) with the two cell gaps in the 800s?

>my purposes. I was hoping to find a simple memory management program.

Yes SS 4 Windows is expensive. But how much did you pay for the radio? And
the interface? Probably almost $800.

A software package like Scan*Star takes many years of engineering to develop,
probably as much or more than AOR invested in the 8000. You get what you pay
for.

The 8000 has a complex interface command set. You just won't find a "simple"
memory management program that works well, exploits the features of the 8000
and is inexpensive.

This is the 4th time I have posted this scanner for sale. People say
they want it, then won't reply to my mail, etc, etc. Only serious
inquiries please.

I love this scanner...it's the best one I've ever owned but I have some
other hobbies taking hold of my brain so I'm just gonna sell it for the cash.

What I've got:

Radio Shack Pro 2022 Base scanner with 12V plug in to run mobile
200 channel plus 10 temporary storage memories
Channels are arranged in banks for easy selection of what you wanna scan
Modified for full 800MHz reception
Used for a year off and on - well maintained and NO scratches period!

This is the Realistic version of the scanner before they went to the
non-modifiable Optimus brand. The local RShack sold these for $399 brand
new, I bought it on clearance (last one of the old stock) for $299. I
would like $175 but will seriously entertain offers. If you give me what
I'm asking, I'll even buy a new 9V Duracell and pay S/H charges for ya.
If I accept anything less, you'll just have to take this battery but I
may still pay S/H charges. We'll discuss this if you are
interested....I'm willing to haggle a bit...

Anyhow, here's my crucials:

Erin Lassley
1222 n 15th
Beatrice, NE 68310-2140
402-228-2462
402-223-2089
Call me in the evening if you must...

Remember, I want to to sell this cuz I need cash. This scanner is not
junk...it works very well...ahem. :-)

4747. REQ:Freqs for my local tv news

Newsgroup: rec.radio.scanner
Date: 1995-09-27 00:00:00 UTC
From: challa1610@aol.com
Message-ID: <44cg6s$fn8@newsbf02.news.aol.com>
Source record: 248570

Hello! I would like to request that someone provide me with the
frequencies for my local tv news crews when they are in the field. I would
like freqs for:

1)KTVU Channel 2 Oakland
2)KRON Channel 4 San Francisco
3)KPIX Channel 5 San Francisco
4)KGO Channel 7 San Francisco

I would like to have both the base and mobile freqs. I would also
like to have the freqs for Metro Traffic (they keep us updated on traffic
conditions here in the San Francisco Bay Area).

Thanks in advance!!

1. It costs more to include tuned circuits and filters for those ranges
2. There's nothing to hear on many ranges (except UHF tv)
3. They have to hide all the birdies sime place

4750. Bear Hill, Waltham, Mass.

Newsgroup: rec.radio.scanner
Date: 1995-09-27 00:00:00 UTC
From: asvirsky@twain.oit.umass.edu
Message-ID: <44bv5t$lcc@nic.umass.edu>
Source record: 248573

I have a question about the history of Bear Hill in Waltham.
This is the hill right beside Route 128 with about 5 towers on it now.
About 15-20 years ago there was a tall free standing tower there with 2
microwave dishes mounted at the top, one over the other, both pointed
north. The tower also had a "crown" of several whip-type antennas on
top. The 2 dishes were removed several years ago, and recently the tower
was removed.
Could anyone please tell me what this tower was and when it was
built, and maybe what it was pointed at?
Some other current uses of the hill that I am aware of are cell
sites, and I believe an experimental 6 GHz mobile phone system (maybe
someone can correct me on this?).

Thanks!
Alex Svirsky asvirsky@student.umass.edu

>monitorable system, I can guarantee they will make a stink about it!

ROTFL!

Sorry! But I have to laugh at that. {GRIN!} The experience that we
have had here in Denver, CO has been negative. The city and county went
to one of those #%$*()%$# GE/Erikson 800MHz systems a while back and the
`news media?' basically `rolled over and played dead'. Oh, there *were* a
few `squeals' of outrage but they basically `played submissive' and have
been under the control of the `boys at the transmitter' when it comes to
getting their $1,000 - $3,000 radios programmed for *just* those
frequencies that the city and county *want* them to hear. To top it all
off... The `Public Works' system (Street repairs, Dog Catcher, Janitors,
ETC.) are on a GE/Erikson system that has *all* the `anti-scanner' goodies
enabled while the `Public Safety' system doesn't. *Both* systems are a
bear to monitor with a scanner but why the heck do they have the `Public
Works' loaded and the `Public Safety' not? (I *can* see a need to keep
things like SWAT and other `critical' operations secure but *not* the
operations of some janitor cleaning out the bathrooms at McNichols
Arena/Mile High Stadium!)

Sooo... Basically... If you believe that a `public outcry' will do *anything* then you are dreaming. Welcome to the `New World Order'/USSA! APCO `Project 25' is a commendable `ideal' but it means that the people who `pay the bill' will be the ones ledt out in the cold.

Doleo ergo sum,
-HALFPINT-

PS
BTW, for the sake of the people who's lives are concerned with by the system let's hope that they are going Motorola and *not* GE/Erikson! The GE system here in Denver has been a farce from day one! At least the Motorola system will be reliable and there is a *much* smaller chance that someone will lose their life due to system/equipment failure.

They could use both, chips are big enough these days to hold a load of
software. The big problem is that the code/software is just like regular
software, ie. Copyrighted. So, if RS or someone else wanted to make a
scanner that decoded Motorola or Ericsson, they have to get permission to
use their code. I don't think we'll see that any time soon.

The Communistwealth of Virgina and Washington D.C. are the only places
you can't *use* radar detectors. They cannot confiscate your detector.It
is perfectly legal to have a radar detector. So, if a cop finds one in
your trunk, he can't give you a ticket. Personally I'd say screw the
Commies and use it anyway. I used one for three years in VA and I was
never bothered. They use K band only. A few states require a permit to
use a scanner but I wouldn't sweat it. If you have a HAM license, your
home free. If you don't just hide it should you be pulled over.

I just got the 3-hour fast charger from Radio Shack. the one the
discharges for one hour and then charges for 2.

Just wondering if this fast charging can reduce the life of your batteries?
does it have any other effects?

ps. a tip to save you a ton of cash. go to rat shack. they have
stickers on their catalogues($3 off each purchase). buy each item as a
single purhase and save 3 on each item. i got $7 hi-capacity batteries
for $4.29.

please e-mail me as i don't look at this too much.

Marty,
It's almost certainly a Lojack system. Looking in the car you should see a small box about six inches square and about three inches tall, with both a digital (green LED) display and a compass device. When a vehicle equipped with Lojack is stolen, the driver calls police, who send out a signal that is received by the stolen car, activating a well hidden transmitter. If a Lojack equipped cruiser approaches the car, the ID flashes, along with the direction on the compass display (that's why the 4 antennas). The officer calls the ID in, and they give him a description to look for. Recovery rates usually exceed ninety percent, although the crooks are getting smarter (the pros anyway). They usually park a stolen car in a busy parking lot and watch it for a few hours now to see if the cops come looking. Also, I have seen something about the same transmitters being hidden in money packs by banks to catch robbers. Wonder what the display shows for this???

If you get a chance, ask one of the cops to show you his lojack-they love it!

4766. Opto456/PRO2006 Spec Analyzer Problem

Newsgroup: rec.radio.scanner
Date: 1995-09-28 00:00:00 UTC
From: jsk@alpha1.csd.uwm.edu
Message-ID: <44eopk$9p4@uwm.edu>
Source record: 248439

I have the Opto/PRO combo, and use ScanStar Pro software. I am having trouble using the spectrum analyzer function.

After setting the parameters for analyze and hitting the enter key, the trace jumps up to the top of the graph (meaning to me there is a strong signal present) and rides the top along the entire graph chart.

I have set the search range to very narrow slices where I KNOW there will be only one or two signals, and I have tried other ranges where I know there should be no (or LOW) signals.

I realize this isn't a lab-quality set up, but I did expect it to work, even just a little to give a rough idea of what's going on in the band.

Has anyone else had a similar experience and what did you do to correct it?

Thanks in advance.

Jeff, NI9E

>
> _mike_
>
Mike,

Get yourself a digital signal processor (DSP). A DSP filters out constant high-frequency sounds such as static and heterodynes. Sometimes (like when your are receiving a strong signal with attendant static, or when there is a fairly uniform overlay of interference such as heterodyne whine), it helps; other times, like when you are receiving a weak signal overlaid with static, you may find that the DSP clips the signal as well as the static.

The foregoing is based on my own experience with Radio Shack's DSP (sorry, don't have the model no. handy, but I believe they only stock the one model). This DSP offers settings for conventional transmissions, single-sideband (SSB) transmissions, and continuous-wave (CW) transmissions. (The latter two settings are primarily of interest to shortwave listeners.) It offers, wide, medium, and narrow bandwidths depending on how severe you want the filtering to be.

Wait till it goes on sale for $50. It lists for $80.

> budged an inch.

I will second Drew's comments. I have not put as many miles on my magnetic mount scanner antenna as he has, but I have put a bunch on it. The ONLY problem that I have ever had with it was when I accidently left a little slack in the cable and got into a bad cross wind in a canyon. The cable made a small scuff mark on the paint. I have never had it move a fraction of an inch even after going down bad dirt roads at higher than reasonable speeds.

Yeah - I ran into the very same problem on numerous occassions. The
worst being a couple of weeks ago at the National Championship Air
Races in Reno, NV. Boy, was I frustrated and angry! I completely agree
that a SAVE should be the default, not only on turning it off, but also
when you pull the AC cord.

A ton of people around where I live use garbled transmission (encryption)
cordless phones on the normal 1-10 channel. There is a big list of
frequecies for off-the wall new cordless phones that is availble via web
surfing if you can find it. Look for scanner.faf ..

W> 1300 (or whatever) with the two cell gaps in the 800s?

Well, Bubba, some do. They cost a lot, and have some problems with birdies and images (more so than those with gaps, it seems).
One problem is that some areas of the spectrum hold little or nothing of interest to the average scanner (like TV, for example), so they are left out to save cost. An advantage to this is that images and birdies can be put there (believe it or not, not all images are 2X1stIF, and birdies can be engineered to specific bands in many cases).
Anyway, there's two real good reasons: cost, and management of spurious signals.
Hope this helps!

To: sbh16@aol.com

Steve,

Here is your list of NEW cordless telephone frequencies as I have received them:

BASE: HANDSET:
43.72 48.76
43.74 48.84
43.82 48.86
43.84 48.92
43.92 49.02
43.96 49.08
44.12 49.10
44.16 49.16
44.18 49.20
44.20 49.24
44.32 49.28
44.36 49.36
44.40 49.40
44.46 49.46
44.48 49.50

Also "POP'COMM Magazine" Popular Communcations had a pretty good write up about Cordless Phones for the month of September 1995, which included all of the new and the exsisting cordless telephone frequencies. The cover of the Magazine has a picture of a man holding what appears to be a large watch "on his wrist" to his mouth, but infact is a "new" cordless phone, heheh, pretty cool. Being able to do yard or house work without worrying about setting the phone on the floor or ground, because its strapped to you're wrist!!! Check them out, I highly recomend POP'COMM for reading and for information value.

STANDARD CCR708A - 50-905 Mhz continuous coverage AC/DC - 100 Channel - WITH BANDSCOPE in mint condition and hardly used.

The CCR708A, with built in bandscope capabilities, has 10 banks of 10 channels which can be filly programmed, searched and scanned. It has memory scan features and program search features. It has FM-W, FM-N, and AM and channel steps fo 10 kHz, 12.5 kHz, 20 kHz and 25 kHz as well as 2 channel steps which can be used only in ADJ operation (rotary channel selector) - 5 kHz and 1 kHz (Up/Down keys). Other features include a SWEP key which changes the Band Scope receiving bandwith, one of the best speakers I've ever heard on any scanner as well as ac/dc operation.

$650.00

4781. NFL Frequencies

Newsgroup: rec.radio.scanner
Date: 1995-09-28 00:00:00 UTC
From: halw@hpwrce.mayfield.hp.com
Message-ID: <44cr7f$eso@hprcl192.mayfield.hp.com>
Source record: 248494

This Sunday, I'm going to the 49er/Giants game at Candlestick/3Comm Park in SF. I just got a Bearcat handheld scanner this last weekend. Is it possible to pickup behind the scenes stuff at the game?

If you know frequencies used, I'd appreciate learning them.

Thanks very much, Hal

4782. Pro 43 priority?

4783. HELP! my pro-2004 is dying

Newsgroup: rec.radio.scanner
Date: 1995-09-28 00:00:00 UTC
From: jfair@vt.edu
Message-ID: <44cqk8$ke2@solaris.cc.vt.edu>
Source record: 248496

Hi all
I have a Pro-2004, which works sporadically. When it does, it works perfectly. After a while, the thing locks up, or just doesn't come on at all. The reset button is powerless in this situation, but some of the buttons still beep when pressed. Also, when I turn it off, it stays on for a second, then fades out(the backlight, that is). Rat Shack "fixed" it once, then told me nothing was wrong the second time. Smacking it sometimes helps. If ANYONE can tell me ANYTHING about my situation, I would be eternally grateful, as this has been a good reciever, and I'd hate to lose it now. Please e-mail me and let me know.
Thanks
John

See page 101 of your manual. Make sure parameters are set so that you will see no LF on the display. When LF is off the disply go to search or scan. Now try to connect with your computer. I did not have very much success with the included software . Currently I am using Scancat Gold 6.0 and it really helps in setting up the banks. I can also upload and download frequencies for any city that I travel too. When you connect with the ar8000 the display will say remote and there will not be any other display information except what is visible on the computer. By the way with the scancat you can scan any other frequencies that you might have programed into other files. Another source of info on the ar8000 is the ar8000 mailing list. I do not have that address handy but if you search under ar8000 or look in some of the scanner home pages you should be able to find it. Daily I am receiving messages on comments and questions on the ar8000 via this mail service. If you dont have it - get it and you will learn a lot more about the ar8000. By the way the new toy for the ar8000 is the opto scout and interfacing it with the 8000 so you can search and direct find frequencies from the scout.
Well have fun with the 8000 and if you have any other questions- I will be glad to help.

Have many guides here and still my favorite is Police Call from the
local Radio Shack. They also have a new book called beyond police
call. Police call is divided into regions. Currently there are 9
regions or 9 books.
I will buy one at the local RS store when I visit that part of the country.
But what works best for me is just visiting the local radio shack
when i visit a new town and ask for there local scanner frequency
list. Most stores have there on list and it usually excellent in
whats really active.
Did this last summer while in Myrtle Beach and there list was
better than Police call and a lot easier to work with.
Good Scanning ! 73's

Source record: 248500

Just received my tone board and am waiting for 800 mhz trunk police / fire system to activate here. Have not really tried it except to check operation on police uhf in this area. Seemed to work ok, had to find the correct tone by using my Pro 2006 and opto 456 board with Scancat Gold software.
Base receivers here are Icom 7000, AR 2500, and Pro 2006. My favorite for normal scanning is the Bearcat 9000 . Very stable with very little intermod with discone at 70 ft and 20 db pre amp. If you need an excellent mobile/portable scanner try the Bearcat 3000. Best mobile rig I have ever had. Excellent rejection of unwanted stations and excellent sensitivity.
By the way, do you know what the battery back up is for the 9000 ? Is there a battery or are they using a capacitor or hopefully an eprom? I called uniden service line and no one knew the answer.
Well have fun with the 9000 and if I can help with anything else will be glad to.

Two words, Type Acceptance.

GMRS and commercial/police/fire/marine two way radio service rules require it, no amateur radios have it. It's that simple. Amateur radios don't have the necessary approval to be used in another service. Now you *can* sometimes take a Type Accepted radio and have spare channels programmed with amateur frequencies by a service shop, so you *can* use one radio for both services. But you can't go the other way. Amateur radios don't need, and don't have, Type Acceptance, but radios for other services are required to have it.

This is a separate issue from licensing. Amateurs are required to have an operator's license as well as a station license. The other services just require a station license. For the other services, that station license requires use of Type Accepted equipment. Amateur station licenses don't have that requirement because operation of an amateur station also requires a licensed operator who has passed a test that supposedly makes him competent to insure legal operation of the equipment. Operators in the other services are assumed to be incompetent boobs who must have radios that can't be used off their assigned channels, or at improper power levels, etc. To insure that, the radios have to be Type Accepted. One of the Type Acceptance criteria is that the radio not be able to be user programmed off its assigned channels. That obviously doesn't describe most amateur equipment.

>Why would that be illegal?

Because Amateur Radio gear isn't type-accepted on the GMRS band. I'm pretty sure that the deviation on GMRS is different than that on the Amateur bands. Use of non-type accepted gear is a no-no in the GMRS band.

The mod for the radio is not illegal but its use would be. The radio
is not type certified for that use. Many people do it however.

My question is, has anyone every been caught for using a non type accepted
radio in the GMRS band (or commercial). How could the FCC tell what type
of radio you are using without sitting in the car with you?

4792. Mobile Data Transfers (police)?

Greetings. As per normal, your post does nothing for the betterment of radio in general. Nevermind, it's not a pressing issue to fix this thing so I'll just hang in there for a little longer.

I read with pleasure a review of Cheek 3 - the ulitmate scanner in the Scanner News. That was a pretty scathing review to be sure!!! Almost as scathing as my review of the World Scanner Report on here not so long ago. I was really hoping that you would have had a rebuttal for it as I was keenly looking forward to backing up my seemingly outrageous claims! <sigh> In fact, the only challenges I received were related to my personality. It would appear that nobody could dispute my claims at all. Well, perhaps you missed it? I can post it again if you like - I know *many* people here found it most interesting. I'm confident that the Email I received concerning what I wrote is the tip of the iceberg of what *many* here felt.

Something to think about.....

Cheers!

Andy

Just to wrap this up, the article read:

"Currently taking best offers"

That means people send their offers and that's what sets the price.

So .... Once again ... Thanks.

True, but it would still be nice to have a ballpark-figure of what he wanted to get for the radio. If I offer $1.98 and that's the "best offer", do I get the radio? I'd guess not.

>She may be using one of those "for export only" telephones that
>I've seen for sale in Manhattan.

This reminds me...

About 10 years ago when cordless phones were really starting to catch on
but their range and performance was still extremely limited (46/49 hadn't
been introduced yet; all US phones were on 1.7/49), I remember seeing an
advertisement for an "export only" cordless phone. This phone used 49Mhz
for the handset (same as the US models) but 27Mhz for the base
transmitter. It was FM and operated on the "RC" channels, located in
between the regular CB channels. The advertisement claimed a range of
one mile with the supplied (telecsoping whip) antenna and up to 5 miles
using an outdoor CB base antenna. Of course it was duly noted that these
models were "for export use only" (Europe, I think)

Anyone remember these?

I have the following scanners for sale:

RADIO SHACK PRO-2005 400 CHANNEL SCANNER $265.00

(price includes Federal Express shipping in US 48 states)

Loaded w/ FCC-authorized fire channels & military UHF 225-400 MHz aircraft frequencies. (See pages 42 & 43 of June 1995 RCMA Scanner Journal for some of my frequencies in this receiver).
Excellent condition. Has mobile mounting bracket (never used) and factory service manual. Returned from Tandy Service Center two weeks ago after replacement of small lamp that provides light
behind LCD frequency readout. Copy of repair center report on scanner provided to buyer. Never modified. Just like new. Have original carton.

RADIO SHACK PRO-44 50 CHANNEL HAND HELD SCANNER $60.00 (postpaid)

50 channels in 30-54 108-136.975 137-174 380-512 MHZ range, with 6 AA rechargeable batteries, manual misplaced (will order for buyer from Radio Shack), very good condition, no mods or damage.

REASON FOR SELLING: I bought a PRO-43 scanner in February 1995 and I no longer need these scanners.

NOTE: This offer expires on 10-6-95 as I am going to place a local newspaper ad for these scanners plus two Regency models equipped with local fire & law crystals.

Best regards,

Phil Johnston

I have had a scout for over a year now and I love it. The one thing I dread about it is having to remember to manually save the freqencies it has found. Many is the time I have finished using it and accidentally turned it off before saving the frequencies- the worst incident was after a whole weekend of "scouting" at our city's armed forces open house- we have both a reserve base and an air force base at the airport. I lost a lot of good security freqs.

I wondered if OPTO company ever thought of addressing the problem (as I saw it, it was a problem) of defaulting to SAVE the freqs automatically when the unit was turned off instead of deleting them.

I took the time once to write a nice letter to the company telling them about my experiences with the accidental loss of frequencies, and offered a suggestion of developing a default SAVE mode when powering down. I did call the company to find out who to write the letter to, but I never received an acknowledgement from them.

Have other SCOUT users found themselves in the same position as myself?

Maybe if we would get together and bring this to their attention, they MIGHT do something about it...

Anyone have a similar experience with frequency loss??

Anyone else try to tell the company about it? What was their response??

Thanks,

Jeff, NI9E

> Male to Male or Female to Female connector.

Bull. Gender bender (or changer) does not imply RS-232 or even
electronics. I'm sorry if whatever (Radio Shack?) sales clerk you
were reaming for not reading your mind didn't know what the heck
you were talking about, but M-M and F-F convertors come in so
many different types of connectors you should be able to tell
them what you really want. If they still don't know then you can
wonder about their knowledge of their products.

For the record:
I don't work for any retail electronics store and never have.
I build my own custom cables when needed.
I know my local Radio Shack stores (and the other electronics
stores) better than most of the clerks in any of them.

On a different subject:
When is Radio Shack going to figure out that it is more
efficient to put one minimum wage employee on the cash
register and have the others help customers with questions?

How many times have you gone in and picked up the one
part you just had to have only to have to wait forever while
all the sales people helped others look at whatever was on sale?

That close to the tower, you're pretty much SOL unless you get a scanner with better image rejection, a different I.F., or a expensive triple-conversion scanner. You might also try an antenna tuner the likes of which Grove sells.

> conditions here in the San Francisco Bay Area).

I don't have the freqs you want (because I don' remember them). But most of the bay area traffic reports I have heard are between 450.0 to 450.1 paired with with 455.0 to 455.1. KGO radio has it's traffic reporters' feed in on this band. When you hear them live on the radio station, start a scan at 450.000 in 12.5KHz steps. The traffic reports are usually done in full duplex and if you hit the repeater (remote base) you will hear both sides of the conversation.

Most remote, live television feeds are microwave. Much around 18GHz, and some as high as 31GHz. In the bay area, it's not uncommon for live shots to be sent from trucks to mountaintop microwave repeaters (Mt. Diablo, Mt. Tam, Loma, etc.) and relayed back to the studios.

The 450 freqs are where you will find much of the press vehicle communications that are not on cellular telephone. You might also some broadcast traffic around 153 and 161MHz.

Keep in mind that all this operates in the Broadcast Auxilary services (including the 450MHz stuff). Monitoring broadcast aux is prohibited - so you have the right to remain silent.

The Space Shuttle Discovery flew piggyback its 747 this week from Florida to California making a stop in Houston and then in Salt Lake City on Wednesday September 27. It was on exhibit Wednesday night in SLC, apparently as a reward for those involved with the project with companies in Utah. It flew over my area (in fact, directly over the town I live in). I wanted to list to the aero frequencies as it came into the airport. I did manage to get ahold of the frequencies I needed, and also conducted a ham radio net with operators spotting its location from appr. 100 miles from the airport. Quite a spectacular site.

4822. Pro-2006 calibration?

Newsgroup: rec.radio.scanner
Date: 1995-09-29 00:00:00 UTC
From: kwong@ee.ualberta.ca
Message-ID: <44h7j9$1568@rover.ucs.ualberta.ca>
Source record: 248385

Is there any way to calibrate the tuning on a Pro-2006 scanner?

When mine is doing a frequency search (direct search or limit search) in the cell band here in Canada, it skips over a lot of strong signals if it is set to the default 30 kHz scan increment. The radio will lock onto all signals if a 5 kHz step is used. However, the frequency readout is almost always +0.005 MHz higher than the actual transmission frequency. There is also a noticeable high pitched tone present with most signals.

I know the 2006 tuning is off because I can hear the same signal -0.005 MHz lower on a different scanner at a frequency listed in a cellular frequency table, i.e. the Pro-2006 receives signals at frequencies like 884.6950 MHz instead of 884.6900 MHz. The other scanner also sounds cleaner because it does not have the high pitched tone of the Pro-2006. Using the same example, if 884.6900 MHz is tuned as a memory channel, I usually hear nothing -- not even static with the squelch turned all the way down.

I have not noticed any tuning problems in other frequency bands (I will double check tonight). I have had the Pro-2006 for a month, but it was a display unit in the store.

After you call me a "holier than thou" (you obviously don't know me)
you use words like "ethically" and "morally"? Ethics and morals
aside - cordless phone users have a _reasonable_ expectation of
privacy, BY LAW. This is a fact you can't deny - you might not like
it, but it is a fact.

[snip]

>

> in."

Hardly - tell me why you listen in on phone calls. Because it's in
the public interest? Bullshit! You listen because you want because
you want to sniff other people's "dirty laundry". If it isn't
voyeurism, what the hell is it?

And if your so much in the right - would you let your neighbors know
that you are listening in on them? "Hey George, you're right about

those Dallas Cowboys. I don't like that Jerry Jones guy either. Did your wife get that message from your girlfriend to you? I had this feeling that she didn't write it down..." O.K. Ken, you didn't say that YOU were actually listening in on phone calls - but if you are, be up front about it with those involved.

"...a logical leap of titanic proportions - "? Read on, Brother Ken!

Let's do a technical comparsion. Light is electromagnetic energy, as in radio waves. Light has frequency, wavelength, etc. If I can see something going on in my neighbors house from my bedroom window, it means those radio waves are getting into my house. But I mentioned that I needed binauculars to peer in, didn't I? Well if I need a scanner to listen in on others, I would say that the logical leap is more comparable to a rubber raft than the Titanic.

> Hey Curtis - you need to be a preacher. You seem to positively relish
> moralistic attacks on others.

You know me pretty well, don't you?

> Mind your own business. Please.

Considering the subject matter, why don't you take some of your own advise?

Anyone that isn't prepared for commentary on their activities shouldn't be telling the world about them on Usenet. I was expecting some heated responses to my post - maybe you should to.

And to the rest of you that are contemplating use of your flame throwers: I don't really care what you do with your scanners. I don't expect any _real_ privacy on my cordless phone, because I make a living in the radio telecommunications business and I know better. I don't support the laws that restrict us from monitoring unencrypted radio traffic. I just think that there are some uses of scanners that go beyond good taste - laws or not. You should notice that I never used the illegality of such scanner use to make my points in my first post.

: I wouldn't worry about it too much. I've traveled all across the country
: and never had a problem. If you're ever stopped and asked, just tell 'em
: it's a ham radio. In fact, if you're really worried, get yourself a ham

This is good advice.

: license. Then you're protected by federal statute and the "lokel yokels"
: can't touch you.

This is bad advice.
Some states had blanket anti-scanner laws. It took a lot of work to
get them to amend their laws to allow exceptions in the case of hams.
Some cities and counties could have anti-scanner laws and a ham license
might not be any protection until you fight the ticket to the Supreme
Court (if then).

I've travelled and scanned a lot too without trouble. But I haven't been
stopped either. (it's been over 10 years since I was last stopped. And that
was for a dead headlight when they were looking for Friday night drunks.)

It's the officer's discretion as to whether it'll be a problem or not if
there is any kind of anti-scanner law in his jurisdiction.

My advice is if you're stopped, turn it off and be as polite and cooperative
as possible. Your personal comportment, your manner of dress, and the style
of car you are driving WILL make a difference in how the officer treats you.
It isn't supposed to, but it will.

I'm looking the way
-to setup new channels,
-to modify current channels
-or to remove some old channels
My Rx/Tx an ICOM H16T has been tuned by vendor and
my manual DOES NOT explain how to proceed with frequency tunning.
Each time I need some new frequencies, I have to send back my Rx/Tx
to the vendor and to wait one or two weeks for get it back to me.

PS: I don't use this Rx/Tx for myself, but for a charitable
association which provides all legal permits needed for frequency
use, and which also often changes, adds or removes some frequencies.

Please answer by mail to supermag@dialup.francenet.fr ,
(and don't expect too quick answer)
Thanks.

4828. Re: Are 3-hour fast chargers good for Ni-Cads?

Newsgroup: rec.radio.scanner
Date: 1995-09-29 00:00:00 UTC
From: Ian Brothwell <ibx@cs.nott.ac.uk>
Message-ID: <44gp8o$osc@griffin.ccc.nottingham.ac.uk>
Source record: 248391
Cross-posted to: rec.radio.scanner,rec.photo.help

There seem to be a new set of rules with regrd to ni-cad batteries just about every season (trickle charge them, sub-trickle charge them, charge and discharge regularly, store them charged, store them discharged etc etc and, of course, ni-cads like any other product come in different types that need different handling according to type).

The one I've seen often quoted and that is relevant in this thread is "don't use a fast charger with ni-cads that were not specifically designed for it".

Charging causes gases to be developed in the battery - charge too fast and guess what could hapen!! I believe that one difference between the fast-charge and normal (slow) charge ni-cads is that the first type have a presure safety valve and the second type do not.

BTW - I've found that disuse killed off more of my ni-cads than did any other method. Leave them in a drawer for a year or two and they really aren't happy.

Finally - a good ni-cad and/or charger will usually come with explicit instructios about its charging, as befits any piece of proper electrical engineerng.

Cheers, Ian

Not any time soon here on the west coast. Someone screwed up and the digital
concept is no longer being pushed or sold out here. Time splicing sucks and
it doesn't work.

Reducing the wave width and adding more channels to about 15 fold looks like
the way. They're experimenting with it in Seattle now on two freq's. Only
mod needed for the phone is more channels and a final amp for the audio.

AR>That close to the tower, you're pretty much SOL unless you get a scanner
AR>with better image rejection, a different I.F., or a expensive
AR>triple-conversion scanner. You might also try an antenna tuner the likes
AR>of which Grove sells.

AR>-Chris

AR>Chris Archer
AR>ARCHER55@AOL.COM

one other option, if you don't mind shopping around a little and have
access to or know someone that has programming software, might be to
look for a used 800MHz handheld with enough channel space to enter in
your local pd's frequencies. program in the stuff in conventional mode,
ctcss tones and all, and inhibit the tx function of the radio. you've
now got a monitor that will more than likely reject all the cellular
interference and still give you clear reception of your local pd's
system.

cellular interference is so bad out here in my neck of the woods that i
finally got fed up and purchased a motorola 32 channel (or mode, if you
like moto's term for channel better) from some dude at a flea market.
a friend has a shop and software for the rig. i loaded up 32 of the
hardest to hear 800MHz frequencies around here (mostly medical and the
lifeflight / calstar medical helecopter frequencies)
the motorola STX makes a great receiver, and the sensitivity is
unmatched by any scanner. don't pay more than a hundred bux or so for
one, however, as it's more than likely hot (then again, what at a flea
market ISN'T hot?)

>
>-Drew in Charlotte-
> KF4DDM

And if Drew doesn't want ME to listen in on his long-distance phone calls which might use microwave RADIO TRANSMISSION, HE must take the initiative to get some Type-III STU-IIIs or Clipper phones, let alone control any other auditory, visual, olefactory, or electrical emissions of his that are observable on MY property & detectable by my Van Eck device, gas chromatograph, high-powered optics (visual + infra red), & audio intercept system using steerable parabolic dishes feeding a computer & DSP-based filters.

Since Drew knew that these non-secure emissions of his were vulnerable to interception, by not securing them he was giving me tacit approval for me to have all of these TRANSMISSIONS --BROADCASTS-- made public. Thus, I can assume he wouldn't complain if I played tapes of him singing along with Barney, reading the porno stories on his computer, or the gas chromatograph analysis of one of his fart TRANSMISSIONS which tends to indicate the presence of some illicit substances in his body.

Tim near Drew in Charlotte ;)

Let them make all the "stink" they want, it going to happan anyhow.
The way things are going, the system is being built by the Water Dept.
because they are the only city dept. with any money. The system is a multi-
site simocast (sp) system that is digital and can not be monitored with
the cooperation of the city. City Dept.s are coming on slowly. First the Water
dept. (who just in the last few years put in their own 420 system, 420 is legalin
Cleveland, Detroit & Buffalo for those of you that wonder what I'm talking
about.) The Police Dept is moving verrrry slow, with some adm. cars on but
no "patrol" on as yet and it seems as though KQA216 (the Fire Dept) will be about the
last to go.

If, and only if, the city gives permission some of the T.V. News depts will
be able to put radios on the system that will be a regular radio but with
voice coms disabled however it will have to be able to transmit for coms
with the data channel. This has been done in some places where the media
bitched real loud.

Kevin Melerine (kevin.melerine@emachine.com) wrote:
: say the company that i work for operates there radio on a trunk line.
: how can i scan there freak.

I suspect they mean an 800Mhz "trunked" radio system. Or, 450Mhz
"trunked" systems seem to be gaining popularity in this area now.

Trunked radio systems make use of several frequencies and using digital
control information *tell* the radios which frequency to talk/listen on
at any given time. The site close to my house, which I've done work on,
uses 8 tranceivers. One tranceiver is dedicated to "data" whereas the
other seven are used for voice - or analog information. In other words,
you'll have to find out all of the frequencies for your trunked site and
deal with the interference of the other users who share this site.

Unfortunately, current scanners are not very well suited to receiving
trunked communications. However, you may be lucky in that what you want
to listen too may actually use only one of the trunked channels. This is
the case with the local police in Toronto. They have many channels but
each division sticks to their own frequency.

Hope this helps,

Cheers!

This sounds intriguing because I am a systems engineer in the cellular industry and never heard of this. What exactly do you mean by "reducing the wave width"? Do you mean reducing the band-width? Is this Narrowband AMPS (NAMPS)? If that's what you mean I can only believe that the phone would change COMPLETELY since North American phones are currently built to the IS-54 air interface standard which is all 30 kHz bandwidth. NAMPS is 15 kHz bandwidth, which changes lots of specs.

Please explain, in just a bit more detail.

Other than your description of them as 800 Mhz antennae, this sounds like a LOJACK system, which uses receivers in police vehicles to track stolen cars with LOJACK transmitters in them. LOJACK operates on 173.025, I think. The antenna setups that I have seen here in Massachusetts consist of 4 VHF quarter wave antennas, which somewhat resemble some cell phone, or 800 Mhz antenna, but without the little coil in the middle.

I would add that in San Francisco, SFPD operates as main escort, usually on either
PIC 6 or 8. And you're right....very interesting listening.

4850. FS: PRO-2026 + Accs. BO

Newsgroup: rec.radio.scanner

Radio Shack Pro-2026 (Revision A)

100 Channel base/mobile operation scanner.
Various predefined search ranges for public service.
Search feature.
More...

BNC Antenna, 12VDC Power.

-Modified for cellular receive-

-Modified for extended memory after lose of power-

Accesories:

- Radio Shack Mag-mount antenna. Receives from somewhere around
25mhz to 1200mhz.. Transmits on 2, 440, and 6meteres up to 35watts.
(BNC Connector, not motorola)

- AC/DC 110Vac to 12VDC convertor (For base use)
- DC plug. (Variable voltage/universale plug) (For mobile use)

This radio is in *very* nice condition and has more features then
a brand new version. I am looking to sell quickly, and will
take offers through email. (ak094@po.cwru.edu)

Out of state purchases pay shipping and insurance. Original
packaging not included, although I think I have the manual
around here somewhere.

Will consider trade, but not likely due to past losses in
'trade' agreements.

> 4W batt and charger for $100 more

I looked at one of these at a local radio shop. The case is exactly
that same as that of the Radio Shack HTX-202/404 HT. Thus, it will use
the same accessories at the HTX-202/404 and the Icom-2AT series Amateur.
The unit will transmit a 5-6W at 12.8V DC, just like the HTX-202/404. It
has 10 channels: 7 for the splinter frequencies, 2 for the repeater pairs
you're authorized, and one channel for the emergency/traveler's aid
repeater frequency pair. The two frequencies you're licensed for can be
programed by the end user. The unit I looked at had the instructions for
doing so right in the box.

Looks like a good unit for the money.

I just recently received the Percon Regional Database, which has a lot
of good information on it, but it won't allow you to add data, like,
"Police channel 2." I'm looking for a scanner frequency database that
I can store and manipulate the data and then print it out.
Any recommendations on a good frequency database?
Thanks!

I wonder if it could be a switching power supply that is
singing? Make sure the transistors are properly heat sunk,
and tight if it is a switching supply. Check all solder
connections and grounds. Finally, do not overlook the
bypass capacitors in the circuit!

Good luck, and 73,
Nels Harvey, WA9JOB

I also have just acquired a new PRO-2006 and am looking to do some
computer operated scanning!

Questions:

1) If I primarily want the *best* computer operated scanning setup
and also be able to program the scanner occasionally for mobile
use.....am I out of luck in getting a board that will do both??
I also want to decode CTCSS, DTMF, etc.

2) What are my choices:
- Optoelectronics OS456
- CE-232 (not familiar with)
- Datametrics (saw an ad in Monitoring Times??)

3) Has anyone seen the OS456 for less than $299US

4) Dumb question: I assume the new OS535 is only good for
use in the new PR0-2035

Thanks in advance !!

Most people probably don't know about it. Local govermnents tend to keep
these things quiet until after they've fully installed the new system...
and by then it's "too late." Call your local newspapers, radio & TV
stations and make sure they know that they will no longer be able to get
news tips on the scanner pretty soon!

>
>-Drew in Charlotte-
> KF4DDM

This has been something many people in the area have known about for
a *LONG* time.

Each public service and utiliy agency in Cleveland will be equiped
with a $4000 HT.

I've seen the acctual HT's. Infac,t the trunking system is already
in place and working. I'm not sure if its FULLY operational, but
if the little blue button on any of these HT's are pressed nobody
can transmit until the situation is taken care of.

The features are so impressive that the news media will brag about them
if anything. I have seen more 'news media' people becoem equiped
with recievers instead of complaining. (but not in this case yet...)

Its unfortunate that they are switching to this system when you
look at it from the scanner side. But in a way, THEY don't give
a damn about you being able to hear. They're improving their
ability to communicate, and if you were the cop out there at 3am

and you needed backup, that little blue button would be your friend.

Although I expect this whole system to have various problems which WILL make it to the news. Just like 911 outages tend to be big news. Its a switchboard, its going to break.

As a former employee of Radio Shack (hey, I was in between broadcasting jobs and needed to pay my rent, what can I say?), the fault here lies with Tandy's compensation plan...and it's a big one!

In addition to being paid on commission, the company keeps track of several criteria regarding an employee's performance. One of those is "dollar per ticket", or the average weekly sales check amount for the employee. Low dollar-per-ticket averages count against the employee.

So...if you're standing at the register with a part, prepare to stand there for awhile. The employees will avoid you like the plague while they all try to outdo each other for that big scanner, stereo, or cellular phone sale. Not only would they lose money (commission) by serving you, it also would count against them in their performance reviews.

Nice system, huh?

> ctcss/dtcs, 19 oz, 5.9" x 2.3" x 1.6", fully hand-programmable!

. . .

> $??? icom ic-f40
> slightly smaller/lighter, 16 ch, not mil spec, not hand-programmable
> (you need to buy software and cable), wider freq range (430-470)

i just called icom and asked some more questions about the f40-LT
(a version of the f40 that has a keypad) and it's looking better.

they claim it's mil spec 810CDE, even though the brochure
didn't say so. that says something about its durability.

also, dealers can set it up for hand-programming.

it's the only radio i know of that's targeted at the 450-470 commercial
band but can also receive and transmit in the 430-450 Mhz ham band.

does anyone out there have or know anything about the icom f40-LT
or the vertex vx500?

George

Here is a thought.

I have been refurbishing and selling a 16 channel 32 watt, user programable radio.
made by fujitsu, it is a high quality type accepted radio. it will work perfectly in the GMRS service, in fact it was made for this type of service. A user can program the radio. no dealer required.

i have been selling them complete for 200.00 including shipping.

4867. Repair Tips for Bearcat Scanner Radios

Newsgroup: rec.radio.scanner

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993, 1994, 1995 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. Free distribution is encouraged.]

Introduction

The original Bearcat scanner line was manufactured by Electra Company, a division of Masco Corp of Indiana. In the mid 1980s, Uniden, a Japanese company, bought out the Bearcat scanner line and Uniden's first Bearcat scanner was the BC800XLT model.

Most of the models discussed in this article are base/mobile units made by Electra during the 1970s and 1980s although some of the capacitor failures occur in the Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P8422" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

Schematics and Parts Available

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023 or (317)842-2483. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges. The phone number for repair is (800)297-1023.

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of

Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Electronic Repair Centers in Franklin Park, Illinois (telephone 708-455-5105) has been repairing Bearcat scanners for several years. They charge a flat $45 repair rate for programmable and $30 for crystal scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Athough there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually

available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier. |

Andy Domonkos reports he often uses a tape recorder | connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier | activated relay inside the BC890XLT wore out. Andy found | the identical relay sold at Radio Shack (part #275-232) and | says the BC9000XLT uses the same relay, too.

4868. **** Recommendation for scanner from Japan

Newsgroup: rec.radio.scanner
Date: 1995-09-29 00:00:00 UTC
From: 74323.2017@compuserve.com
Message-ID: <44gdqi$e87@dub-news-svc-1.compuserve.com>
Source record: 248471

I'm in Japan right now and have a day to purchase a scanner.
Does anyone have any recommendations for a scanner for under $400
(US Dollars) from Japan?

Any suggestions and comments would be appreciated.

Thanks!

74323.2017@compuserve.com

I don't know about sstvfax2.zip, but I swear by JVFAX 7.0, and the interface is easy as h*ll to build. It's a great all around program for HF fax, NOAA and Meteor low sats (special converter needed), and almost all modes of SSTV. I can provide the latest version if you have difficulty finding it.

>>

FROM CALIFORNIA...SF BAY AREA...the press cannot do much if the
agency refuses to allow the t.v. people to get access to the
programming depts...that is the key. here in the bay area the
Oakland PD has trunked...the only way to get it is to be Press
and you only get the three main channels and one talk channel...

the rest is fire..who are also on trunked 800...that's it.

then there is ALCO...alameda county fire...they will not allow
the press to be programmed for their "proprietary" channels.
In other words: you may buy a radio, but you won't be given
the spark plugs. They just will not budge. So scanners to get
hold of activity is impossible...much news is missed due to this

new system they have...but Oakland is even worse...all Oakland agencies use it...plus other cities they contract out for use of the system...income provider for Oakland.

San Francisco is next: they are going to put in a 30 million dollar system...much more advanced than Oakland or ALCO...

the press cannot do anything to get access if the agency don't allow it...THE PRESS DON'T CARRY ANY WEIGHT WITH THE COPS...OR any city/state agency ... the less the press hears the better the cops like it...

I'm a stringer...and the stories i miss covering in ALCO area is now enough to fill a large "tear pot"...they, the cops and fire too, don't have to worry about "press lines" because by the time the incident is under control...it's over and the press arrives because someone called just as it was ending

The Cops Rule...period. don't listen to that part about press making noises..to make waves...right? the cops just don't care...

as for digital...it's the kind that cannot be monitored. I'm told by one source close to the ground that this is not going to happen anytime soon...it's just too expensive for local agencies to put out on the cars and in the pab and on' portables and etc....very expensive...but in time the price will come down once the Japanese are able to sell the Ruskies and the Vietmanese and the other dictators who have plenty of money gotten from the USA to buy these "secret" talk boxes and systems...then the USA locals will be able to afford it...

Look at what the big boys are doing in vietnam...building a system where the dictators can control who gets access to the Internet adn what they say on it and all sorts of stuff... then when this is perfected...into the USA it goes...makes Jessee HELMS smile...another "democraticly elected dictator"

where will it end...? That's how it will happen...just as soon as Vietnam gets the system perfected...they then will sell the idea to the US Government...Jessee will probably ok the check.

There a books available that cover just 1 state each, in an amazing amount of detail. I live in Massachusetts, and there is a company here (Scanner Master) that publishes it's own guides. Their new Mass. version is 692 pages for Mass. alone, and is VERY well organized. They also sell "pocket guides" for the various New England states so you don't have to lug the big volumes around.

> use.....am I out of luck in getting a board that will do both??
> I also want to decode CTCSS, DTMF, etc.

Yes, you're out of luck. The OS456 board (and the OS535) is not connected to
the radio internal memory. To do so would have made the installation much more
difficult and intrusive. Both the OS456 and OS535 do PL/DPL/DTMF.

>2) What are my choices:
> - Optoelectronics OS456
> - CE-232 (not familiar with)
> - Datametrics (saw an ad in Monitoring Times??)

The best choice is clearly the OS456. The PRO-2006 + OS456 is the best computer capable scanning setup you can buy under $5000! It's fast and with the right software can be even better. The other two control the radio by simumating button pushes - a slow process at best, and they don't really do computer scanning at all, nor do they decode tones.

>3) Has anyone seen the OS456 for less than $299US

Yes $279, but don't remember who.

>4) Dumb question: I assume the new OS535 is only good for
> use in the new PR0-2035
>

No question is dumb - and you assume correctly, although to call the 2035 new is ironic since it's being discontinued for the new 2042, which is supposed to be very similar.

>Thanks in advance !!

Sheesh, if you can afford all that stuff, go ahead and listen to me.
Bottom line, you want privacy on a phone or any transmitting device (ie.
Internet) then encrypt it. The US Military learned this quite a while ago.

Pat, I'm not familiar with your specific setup but here is a general
CTCSS description, which was designed to allow users to be fairly close
together without actually hearing each other.

The capture effect is a term used to describe the fact that whenever two
FM radio signals are transmitted, the receiver only hears the closest one,
ignoring the other one entirely. Because of this, it is possible to
have licensees fairly close together without interference, although it is
annoying to have to listen to the other licensee when your's are not
transmitting. CTCSS solves this by sending a tone along with the
transmitted signal. Using different tones in adjacent areas allows
systems to virtually ignore each other. Some ham radios have a tone scan
function that will let you determine what tone is used by listening. If
you don't have one of these, the easiest way to find out what tone is
used is to listen on a busy night. Dial in a tone, wait for a
transmission, and see if it comes through. If not, try the next tone,
and so on and so on. Once you find a tone, try it on other users in the
same city since the FD, PD, etc will often use the same tone. If
nothing comes through they may not be using this at all.
It's worth it once you get it up and running.

AIrtouch cellular (the wireline carrier for most of california and Nevada is planning to bring Code Division Multiple Access (CDMA)digital cellular service sometime in 1996. D-AMPS (the time division multiple access system in use by celluar one and other carriers) has been lackluster in performance. I think CDMA digital is the way to go. CDMA is a complex system to program but offers higher user density (by a factor of 10 over analogue) and dynamic user channel distribution. GSM is gaining popularity amongst the new PCS (Personal Communications Services) 1.8 GhZ systems. GSM is widely used in europe and I suspect will play a big role in PCS services in the US Look for those systems to be in place in two years or so. Hope this helps

Do you mean the frequencies at Shawmut Center? At Kiel Center in St. Louis, I had an opportunity last month to look behind the benches. The Blues bench has three cables running from it into the bowels of Kiel Center. Two of the cable connectors are, it appears, for audio communications; one is for a computer. The *visiting* bench has no such cables. Last season, during the Blues-Canucks first-round series, I pulled in the Vancouver coaches on 49.83 MHz. I'm taking my Pro-43 to Kiel tonight: Dallas is in town. I'll see what I can hear.

Hello,

Does anyone know the VHF/UHF radio frequencies as used by the Connecticut
FBI ?
I know their general frequency range and that they tend to use digital
encryption. I still , however , would like to know the channel frequency break
down, if possible.
Please feel free to respond to my email address.

EMAIL- campagna@q.continuum.net

Thanks in advance,

Dennis

I'm not the scanning authority, but that's the same "technique" that Uniden offers with their BCT7 for the car antenna. They distribute with the scanner a wire which has about 20 inches uninsulated that is connected to the windows with suction cups. In my apartment, my scanner picked up stuff better with the car antenna than with the house whip antenna it came with..

Deviation is the same on both ham and GMRS. In fact, some GMRS radios are ham radios with different faceplates, jumper settings, and that all-important Type Certification, which adds a couple of hundred bux to the price.

>possibly from the old "Q" codes - "QRS?" sent in morse code as a request for
>the receiving party to evaluate the signal quality on a 1 - 10 scale.
>------------------------ End of Buffer ------------------------------
>
Wha???

QRS? = Shall I send more slowly?
QRS = Send more slowly.

S, as in S-meter signifies Signal Strength, on 0-9 scale, with
incremental readings above S-9 expressed in db over S-9.

It is part of the RST signal report
R= Readability 0-5
S=Strength 0-9
T=Tone 0-9 (used by CW operators to report quality of CW note,
9 being "pure" lower having A.C. hum or other non-DC artifacts)
Radiotelephone reports obviously just use the RS part.

In reguards to that new system being implemented in Cleveland, OH.
It's the fearful wave of the future.
You don't need an ISPF/US (Internal Security and Poilce Force) to go
door to door and collect citizen's radios and scanners.
When by a set date in the future, all the countrys "Public Saftey" will
be "Digitalized"!.
Let them keeps their obsoulute radios. The STATE will say.
This may be paranoid opnion on my part. But you have to read the writing
on the wall. It's scary
Enjoy your scanning now for the next few years. Till it's all
"Digitalized"!

> I just picked up a Radio Shack Pro-2040 model scanner, and was wondering
>if anyone knows of any mods for them. I have 30-40 text files for moding
>all types/brands of scanners except this one. Help...

If they (RS) follow the same schem of "blocking" (cellular frequencies)
that they use in Pro-2035, the only way to "unblock" the scanner is to change
the logic board (the board attached to the display). It's like a CPU or
something like.

In the PRO-2035 you have to change this chip/board, i don't know if the
same apply to 2040.

PS: What's new on 2040 ??

Well folks, after one week of intense research and with all your help, I have finally decided to purchase the Maxon 210+3. I ordered it from Communication Electronics who seems to have the lowest price around ($174.99 for 2 units and more + $15 shipping/unit). The guy from CE said this is the hottest radio today and they can't keep up with the inventory. I have also talked to Maxon Customer Service and was impressed with their knowledge about the radio.

Thanks to you all who have provided info on this subject, post or email. I've learned so much...

Hello-

Just wanted to know what everyone thought of the Pro 26 from Radio Shack
and the Realistic Pro 26 from Intertan. I had the Radio Shack version
but I returned it and bought the European Realistic version. It has
continuous coverage, 25-1.3 ghz. Works great. A few questions though.

-How much should I have paid?
-I obtained it through someone else but how
difficult is it to get the European version into the
United States?
-Is this an excellent scanner, compared to what's out?
-Any other Pro 26 owners out there, European
version or American? What do you think of the P26?

Thanks,
Craig

It's a DEALER store, not a company store...big difference!!

As a dealer store, your friend is not choked off by the long arm of the corporate law in Ft. Worth. He is not subject to all the ridiculous policies, rules, regulations, dollar-per-ticket quotas that discourage employees from helping customers at the register, bonuses for selling obsolete merchadise, and pay scales that are woefully inadequate for hiring competent, knowledgeable people and keeping them. He also isn't "locked in" to selling just the Radio Shack merchandise. When a private vendor offers a superior product, he can sell it in place of or along-side the Radio Shack version (CB radios and antennas, for example)

I am quite fond of authorized dealer stores and will shop there instead of at a company store whenever I have the chance.

I used a Larsen mag mount 2 meter quarter wave for about 3 years
(75,000 miles) from 1978 to 1981 and never had any problem with it
driving speeds up to 80 mph (ah, I did occasionally have a problem with
the N.C. Highway Patrol and ultimately my insurance company! :-). It
DID move a little because it scratched the paint on the car, but it
was always stable.

At hamfests, vendors sell both 3" and 5" round mag mounts (the Larsen
was rectangular) and I personally would only choose the 5" unit.

You may also want to try the NJ Sports & Exposition Authority at Giants Stadium and Bergen County PD. I'd be interested in some of the freqs you'll be monitoring.
